

Make your *time better spent* with these

5 Summer Energy-Saving Tips

1

Run dryers, dishwashers and other large appliances after dark so your air conditioner isn't fighting too many battles at once.

Keep cool air in and hot air out by sealing doors and windows.

2

3

Check all of your vents to make sure they're open, free of dust and directing air toward the center of the room.

Replace your shower head with a low-flow model. Doing so reduces both your water and energy use from your water heater.

4

5

Upgrade to high-efficiency natural gas appliances to save time, energy and money!
