(1) Revenue-to-cost ratios are the ratios of each class' non-gas revenue (including revenue credits) to the cost of service.

(2) Non-gas revenue is the sum of as adjusted test year base revenue (i.e., revenue from recurring monthly charges resulting from as adjusted billing determinants), service charge revenue, special contract revenue, and other revenue credited to the cost of service for each class.

(3) Total revenue is the sum of non-gas revenue (see Note 2) and as adjusted gas costs. As adjusted gas costs are calculated by multiplying the test year average cost of gas (i.e., test year gas cost revenue divided by unadjusted sales service volumes) by as adjusted sales service volumes.

(4) For each class with a cost of service required revenue decrease, 20 percent of the required decrease is assigned to the benefit of implementing less than the required decreases is assigned to the residential class. (5) No revenue change assigned to a class for which the cost of service required revenue change calls for a decrease. The resulting benefit from not implementing the required deceases is assigned to the residential class. Page 1 of 36

(1) Revenue-to-cost ratios are the ratios of each class' non-gas revenue (including revenue credits) to the cost of service.

(2) Non-gas revenue is the sum of as adjusted test year base revenue (i.e., revenue from recurring monthly charges resulting from as adjusted billing determinants), service charge revenue, special contract revenue, and other revenue credited to the cost of service for each class.

(3) Total revenue is the sum of non-gas revenue (see Note 2) and as adjusted gas costs. As adjusted gas costs are calculated by multiplying the test year average cost of gas (i.e., test year gas cost revenue divided by unadjusted sales service volumes) by as adjusted sales service volumes.

(4) For each class with a cost of service required revenue decrease, 20 percent of the required decrease is implemented. The benefit of implementing less than the required decreases is assigned to the residential class. (5) No revenue change assigned to a class for which the cost of service required revenue change calls for a decrease. The resulting benefit from not implementing the required deceases is assigned to the residential class.

AFFIDAVIT OF CRYSTAL DRUMM

BEFORE ME, the undersigned authority, on this day personally appeared Crystal Drumm who having been placed under oath by me did depose as follows:

- 1. "My name is Crystal Drumm. I am over the age of eighteen (18) and fully competent to make this affidavit. I am employed as a Rates Specialist for ONE Gas, Inc. The facts stated herein are true and correct based upon my personal knowledge.
- 2. I have prepared the foregoing Direct Testimony and the information contained in this document is true and correct to the best of my knowledge."

 Further affiant sayeth not.

Crystal Drumm

SUBSCRIBED AND SWORN TO BEFORE ME by the said Crystal Drumm on this 9th day of December, 2019.

Notary Public in and for the State of Oklahoma

| 1 | | DIRECT TESTIMONY OF PAUL H. RAAB |
|----|----|---|
| 2 | Q. | PLEASE STATE YOUR NAME, OCCUPATION AND BUSINESS |
| 3 | | ADDRESS. |
| 4 | A. | My name is Paul H. Raab, and my business address is 5313 Portsmouth Road, |
| 5 | | Bethesda, Maryland 20816. I am an independent economic consultant. |
| 6 | Q. | ON WHOSE BEHALF ARE YOU APPEARING TODAY? |
| 7 | A. | I am appearing on behalf of Texas Gas Service Company ("TGS" or "the |
| 8 | | Company"), a Division of ONE Gas, Inc. ("ONE Gas"). |
| 9 | | I. <u>INTRODUCTION AND QUALIFICATIONS</u> |
| 10 | Q. | WHAT IS YOUR EDUCATIONAL BACKGROUND? |
| 11 | A. | I have a B.A. in Economics from Rutgers University and an M.A. from the State |
| 12 | | University of New York at Binghamton with a concentration in Econometrics. |
| 13 | | While attending Rutgers, I studied as a Henry Rutgers Scholar. |
| 14 | Q. | PLEASE DESCRIBE YOUR BUSINESS EXPERIENCE. |
| 15 | A. | I have been providing consulting services to the utility industry for my entire career, |
| 16 | | having assisted electric, gas, telephone, and water utilities; Commissions; and |
| 17 | | intervenor clients in a variety of areas. I am trained as a quantitative economist so |
| 18 | | most of this assistance has been in the form of mathematical and economic analysis |
| 19 | | and information systems development. My areas of focus are planning issues, |
| 20 | | costing and rate design analysis, and depreciation and life analysis. I began my |
| 21 | | career with the professional services firm that is now known as Ernst & Young, |
| | | |

where I was employed for ten years.

22

| 2 | | REGULATORY PROCEEDINGS? |
|----|----|---|
| 3 | A. | Yes. I have previously provided expert testimony before this Commission and |
| 4 | | numerous state regulatory authorities, as well as the Federal Energy Regulatory |
| 5 | | Commission, the Michigan House Economic Development and Energy Committee, |
| 6 | | the Pennsylvania House Consumer Affairs Committee, the Province of |
| 7 | | Saskatchewan and the United States Tax Court. Details on the subject matter of |
| 8 | | the testimony presented are provided in Exhibit PHR-1. |
| 9 | Q. | WAS THIS TESTIMONY PREPARED BY YOU OR UNDER YOUR |
| 10 | | DIRECT SUPERVISION? |
| 11 | A. | Yes, it was. |
| 12 | Q. | HAVE YOU PREPARED ANY EXHIBITS IN CONNECTION WITH YOUR |
| 13 | | TESTIMONY? |
| 14 | A. | Yes. I prepared and sponsor the exhibits listed in the table of contents. |
| 15 | Q. | WERE THESE EXHIBITS PREPARED BY YOU OR UNDER YOUR |
| 16 | | DIRECTION? |
| 17 | A. | Yes. |
| 18 | Q. | WHAT IS THE PURPOSE OF YOUR TESTIMONY? |
| 19 | A. | My testimony presents and supports the rate design I developed for the proposed |
| 20 | | Central-Gulf Service Area ("CGSA") based on the CGSA class cost of service |
| 21 | | ("CCOS") study results sponsored by TGS witness Crystal D. Drumm. |
| | | |

HAVE YOU TESTIFIED PREVIOUSLY BEFORE THIS COMMISSION IN

1

Q.

| 1 | Q. | DID YOU ALSO DEVELOP SEPARATE RATES FOR THE CENTRAL |
|----|----|--|
| 2 | | TEXAS SERVICE AREA ("CTSA") AND THE GULF COAST SERVICE |
| 3 | | AREA ("GCSA")? |
| 4 | A. | Yes. I developed rates based on the separate CTSA and GCSA revenue |
| 5 | | requirements in order to set rates in the event consolidation of the two service areas |
| 6 | | is not approved.1 Exhibit PHR-7 provides the proposed rates for the CTSA, and |
| 7 | | Exhibit PHR-12 provides the proposed rates for the GCSA based on each area's |
| 8 | | separate revenue requirement. Each of these exhibits is presented in the same |
| 9 | | format as the proposed CGSA rates proposed in Exhibit PHR-2. Thus, my |
| 10 | | explanation of content of Exhibit PHR-2 applies to Exhibit PHR-7 and to Exhibit |
| 11 | | PHR-12. |
| 12 | | II. <u>RATE DESIGN</u> |
| 13 | Q. | PLEASE DESCRIBE THE CURRENT RESIDENTIAL RATES IN THE |
| 14 | | CTSA AND THE GCSA. |
| 15 | A. | Current CTSA and GCSA rate structures consist of a fixed customer charge and |
| 16 | | usage charges for each customer class, including the residential class. The |
| 17 | | residential customer charge is \$18.81/customer/month in the environs and |
| 18 | | incorporated CTSA, \$12.42 in the incorporated GCSA, \$14.17 in the GCSA |
| 19 | | environs and \$12.10 in the City of Beaumont. |
| 20 | | Residential usage is priced at a single per Ccf rate of \$0.12061 in the CTSA |
| 21 | | environs and incorporated areas, \$0.45616 in the GCSA incorporated areas and the |
| 22 | | City of Beaumont and \$0.40680 in the GCSA environs. |

¹ Rate design for customers in the City of Beaumont is included in GCSA.

.

21

22

23

A.

A. For commercial sales customers, charges current customer are \$53.33/customer/month in the CTSA, \$51.11 in the GCSA incorporated areas, \$59.92 in the GCSA environs and \$49.49 in the City of Beaumont. Commercial usage is priced at a single per Ccf rate of \$0.11614 in the CTSA and under a declining block structure in the GCSA incorporated areas and environs and the City of Beaumont. Monthly consumption less than or equal to 250 Ccf is priced at \$0.22140 in the GCSA incorporated areas and the City of Beaumont and \$0.20185 in the GCSA environs and monthly consumption greater than 250 Ccf is priced at \$0.19380 in the GCSA incorporated areas and the City of Beaumont and \$0.17425 in the GCSA environs.

The usage of commercial transportation customers is priced at the same volumetric rate as sales customers in both service areas. Customer charges for commercial transportation customers of \$265.33/customer/month in the CTSA, \$297.11 in the GCSA incorporated areas and \$305.92 in the GCSA environs reflect the higher metering costs associated with providing service to these customers.

17 Q. PLEASE DESCRIBE THE CURRENT INDUSTRIAL RATES.

For industrial sales customers, current customer charges are \$320.96/customer/month in the CTSA, \$153.41 in the GCSA incorporated areas and \$242.79 in the GCSA environs. Industrial usage is priced at a single per Ccf rate of \$0.10273 in the CTSA and under a declining block structure in the GCSA incorporated areas and environs. Monthly consumption less than or equal to 250 Ccf is priced at \$0.40060 in the GCSA incorporated areas and \$0.37808 in the

GCSA environs and monthly consumption greater than 250 Ccf is priced at \$0.37480 in the GCSA incorporated areas and \$0.35228 in the GCSA environs.

A.

The usage of industrial transportation customers is priced at the same volumetric rate as sales customers in both service areas. Customer charges for industrial transportation customers of \$520.96/customer/month in the CTSA, \$249.73 in the GCSA incorporated areas and \$432.79 in the GCSA environs also reflect the higher metering costs associated with providing service to these customers.

Q. PLEASE DESCRIBE THE CURRENT PUBLIC AUTHORITY RATES.

For public authority sales customers, current customer charges are \$81.70/customer/month in the CTSA, \$106.10 in the GCSA incorporated areas and \$117.78 in the GCSA environs. Like the commercial and industrial rates described above, public authority usage is priced at a single per Ccf rate of \$0.11541 in the CTSA and under a declining block structure in the GCSA incorporated areas and environs. Monthly consumption less than or equal to 250 Ccf is priced at \$0.15672 in the GCSA incorporated areas and \$0.13587 in the GCSA environs and monthly consumption greater than 250 Ccf is priced at \$0.13092 in the GCSA incorporated areas and \$0.11007 in the GCSA environs.

The usage of public authority transportation customers is priced at the same volumetric rate as sales customers in both service areas. Customer charges for public authority transportation customers of \$104.70/customer/month in the CTSA, \$302.36 in the GCSA incorporated areas and \$307.78 in the GCSA environs also reflect the higher metering costs associated with providing service to these customers.

| 1 | Q. | PLEASE DESCRIBE THE CURRENT PUBLIC SCHOOLS SPACE |
|----|----|---|
| 2 | | HEATING RATES. |
| 3 | A. | In both the CTSA incorporated areas and environs, public schools space heating |
| 4 | | sales customers are served under a two-part rate consisting of a customer charge of |
| 5 | | \$134.70/customer/month and a single usage charge of \$.10012/Ccf. The usage of |
| 6 | | public schools space heating transportation customers is priced at the same |
| 7 | | volumetric rate as sales customers. Customer charges for public schools space |
| 8 | | heating transportation customers are \$234.70/customer/month. The Company does |
| 9 | | not currently offer a separate rate for public schools space heating customers in the |
| 10 | | GCSA. |
| 11 | Q. | PLEASE DESCRIBE THE CURRENT COMPRESSED NATURAL GAS |
| 12 | | RATES. |
| 13 | A. | In both the CTSA incorporated areas and environs, compressed natural gas sales |
| 14 | | customer charges are \$192.63/customer/month and usage is priced at \$0.06684 per |
| 15 | | Ccf for all usage. For compressed natural gas transportation customers, customer |
| 16 | | charges are \$217.63/customer/month and usage is priced at the same rate as |
| 17 | | compressed natural gas sales customers, \$0.06684 per Ccf for all usage. The |
| 18 | | Company does not currently offer a separate rate for compressed natural gas |
| 19 | | customers in the GCSA. |
| 20 | Q. | PLEASE DESCRIBE THE CURRENT ELECTRICAL COGENERATION |
| 21 | | RATES. |
| 22 | A. | In both the CTSA incorporated areas and environs, electrical cogeneration sales and |
| 23 | | transportation customers are served under the same rate: a customer charge of |
| 24 | | \$104.70/customer/month and a declining block rate structure for usage. The |

| 1 | | Company does not currently offer a separate rate for electrical cogeneration |
|----|----|---|
| 2 | | customers in the GCSA. The current blocking structure for usage is as follows: |
| 3 | | Electrical Cogeneration Usage Rates Volumes Rates |
| 5 | | First 5,000 Ccf \$0.07720 |
| 6 | | Next 35,000 Ccf \$0.06850 |
| 7 | | Next 60,000 Ccf \$0.05524 |
| 8 | | All Over 100,000 Ccf \$0.04016 |
| 9 | Q. | HOW DID YOU DESIGN THE PROPOSED CGSA RATE |
| 10 | | RECOMMENDATIONS? |
| 11 | A. | I began with class revenue recommendations developed by Ms. Drumm. As |
| 12 | | described more fully by Ms. Drumm, those recommendations are the result of |
| 13 | | applying class Revenue Allocation Three, under which only those classes that are |
| 14 | | indicated to be contributing revenues less than their full cost of service are assigned |
| 15 | | a portion of the revenue deficiency and the rates of those classes that are indicated |
| 16 | | to be contributing revenues in excess of their full cost of service are not reduced. |
| 17 | | Furthermore, to ensure rate continuity, I relied on the current incorporated CTSA |
| 18 | | rate structures for each class as the starting point in designing the recommended |
| 19 | | consolidated rates in this case. The concept of rate continuity suggests that current |
| 20 | | rate structures form the basis for recommended rates. |
| 21 | | I also considered intraclass equity which relates to the fairness in the |
| 22 | | collection of revenue from customers within a class who use different amounts of |
| 23 | | gas. For each customer class, rates should be designed so that fixed costs are |
| 24 | | recovered through the fixed monthly customer charge, and variable costs are |
| 25 | | recovered through the volumetric charges. If a class' customer charge is too low to |
| 26 | | fully recover fixed costs, moderate-and high-use customers unfairly pay part of the |

cost to serve lower use customers. Likewise, if the volumetric charge is too low to fully recover variable costs, relatively low-use customers unfairly pay part of the cost to serve moderate-and high-use customers.

A.

I also assessed average monthly and winter bill impacts for each customer class. Both average monthly and average winter bills are examined to ensure that disproportionately large impacts do not occur in the winter when customers have the highest bills and could have trouble in paying them. Furthermore, because the Company is proposing a slightly different rate structure for residential customers than the rates under which these customers are currently served, I present a more detailed analysis of rate impacts in which the bill impacts by annual consumption level are examined. In considering bill impacts, it is important to recognize that no matter how rates are designed for the class, there will be a wide disparity in customer bill impacts, some of which will be large.

Finally, when designing rates, it is important that customers can easily determine which rate offering is most appropriate for their usage level. By keeping the usage charge the same for sales and corresponding transportation classes, this is accomplished.

Q. HAVE YOU IDENTIFIED ANY CHALLENGES IN DESIGNING RATES FOR THE PROPOSED CGSA?

Yes. First, current rates in the GCSA and CTSA allow residential customers to pay less than the cost to serve them. Therefore, all other classes pay more than their own class cost of service, which creates interclass inequities with the revenue collection across customer classes in these two service areas.

| 1 | | Second, current monthly rate levels differ significantly between the CTSA |
|----|----|--|
| 2 | | and GCSA and between incorporated areas and the environs of the GCSA. These |
| 3 | | differences are a result of timing differences in rate adjustments between the service |
| 4 | | areas and different interim rate adjustment mechanisms employed in the different |
| 5 | | service areas. |
| 6 | | Finally, in both the CTSA and GCSA, current residential customer charges |
| 7 | | are below the fixed cost per bill indicated by the CGSA CCOS study. This means |
| 8 | | that moderate and high-use customers are paying a disproportionate amount of the |
| 9 | | class costs. |
| 10 | Q. | WHAT ARE YOUR RECOMMENDED RESIDENTIAL CUSTOMER AND |
| 11 | | USAGE CHARGES FOR THE PROPOSED CGSA? |
| 12 | A. | Even if one were to apply the higher customer charges associated with the CTSA |
| 13 | | (\$18.81/customer/month) to all customers in the consolidated CGSA, the resulting |
| 14 | | CGSA usage rates would collect 29% of total residential revenue, while the CGSA |
| 15 | | CCOS study shows that residential variable costs are less than 0.5% of the cost to |
| 16 | | serve the class. As a result, current residential customer charges significantly |
| 17 | | under-recover residential fixed costs. These residential rates lead to moderate- and |
| 18 | | high-use customers paying a disproportionately large share of the cost to serve the |
| 19 | | class. |
| 20 | | The Company's proposal to address this inequity is so-called "usage level" |
| 21 | | or "A/B" rate designs ("A/B Rates") for the residential class. A/B Rates allow the |
| 22 | | Company to improve its fixed cost recovery while avoiding the rate shock problem |
| 23 | | associated with simply raising customer charges to levels indicated by the COSS. |
| | | |

Such a rate design includes multiple two-part rates for the same class of customers.

24

| 1 | | One set of rates (the "A" Option) is more advantageous for lower usage customers |
|---|--------------|--|
| 2 | | because it has a low customer charge and higher usage rates. The other set of rates |
| 3 | | (the "B" Option) is more advantageous for higher usage customers because it has |
| 4 | | lower usage rates but a higher customer charge. While there is no theoretical |
| 5 | | restriction on the number of rate options that could be offered, from the standpoints |
| 6 | | of customer understandability and ease of administration, two is a reasonable |
| 7 | | compromise that gives customers with different usage patterns a distinct choice in |
| 8 | | how they are billed for service. |
| 9 | | The annual consumption level at which customers are economically |
| 10 | | indifferent to one rate option versus the other is the "breakpoint." While there is a |
| 11 | | clear option advantage for customers depending on their normal usage levels, they |
| 12 | | can choose the option under which they would rather be served, so long as they |
| | | |
| 13 | | remain with that option for one year. |
| 13 14 | Q. | remain with that option for one year. PLEASE DESCRIBE THE USAGE LEVEL OPTIONS THAT YOU |

23

A.

A.

As stated above, I began with the Company's CCOS study and developed a benchmark single, two-part (a customer charge and a commodity charge) rate for all affected customers. In all the resulting rates, I determined that a customer charge of \$27.58 most accurately captures the customer-related and demand-related costs by class identified in the Company's CCOS study as described by Ms. Drumm.

This customer charge results from the development of a so-called "Straight Fixed-Variable" or SFV rate. These types of rates are particularly appropriate for natural gas LDCs because they operate in competitive end-use markets for every residential customer that they serve. In other words, there is not one end-use that LDCs provide the energy to serve that cannot also be served by a competing energy source (electricity, propane, fuel oil, wood, etc.). Because of this, it is extremely important that the prices faced by residential customers reflect the costs of providing that service, or customers could make energy-consumption decisions that do not maximize economic welfare. This is particularly true on an intraclass basis, where higher volume residential users of natural gas are predominantly heating customers and lower volume users are non-heating customers. SFV rates help to ensure that the individual end-use markets in which these two types of customers participate are not distorted.

20 Q. WHY ARE YOU NOT SIMPLY PROPOSING THE RATE DESIGN YOU **JUST DESCRIBED FOR ALL CUSTOMERS?**

Because that rate structure, when applied to typical bills experienced in the residential class, resulted in significant bill increases relative to the Company's

current rate structures in the CTSA and GCSA for lower usage customers.² Thus, while the rate structure just described would best match the costs of service identified by the Company, it would not avoid significant rate shocks for those customers. Because of this, I adopted a different approach to developing the proposed rate by determining a rate design that best fits the circumstances of both low-use and high-use customers.

Q. HOW DID YOU DO THIS?

A.

Recognizing that lower usage customers would experience the biggest shock from a rate design with a higher customer charge that more closely reflects the cost of service, I propose to set the customer charges for lower usage customers equal to \$14.00/customer/month, a level approximating the lowest customer charge that residential customers are currently charged in the GCSA environs, GCSA incorporated or CTSA service areas. I also propose that, since higher usage level customers will not face rate shock issues as a result of implementation of rates with higher customer charges that more closely reflect the cost of service, they should be billed a customer charge that reflect the full cost of service to the extent possible. The only question then left to answer was how to distinguish between a lower usage Option A customer and a higher usage Option B customer.

Q. HOW DID YOU MAKE THAT DETERMINATION?

A. In effect, I let the competing rate options applicable to a customer class make that decision for me. I did this by determining that level of annual consumption at which a customer's bill would be equal under either option. Since consumption below

² As mentioned previously, City of Beaumont customers are included with the GCSA.

| 1 | | this annual consumption level results in lower bills under the Option A rate, this is |
|----|----|---|
| 2 | | the preferred option for the lower usage customers. Conversely, since consumption |
| 3 | | above this annual consumption level results in lower bills under the Option B rate, |
| 4 | | this is the preferred option for the higher usage customers. |
| 5 | Q. | WHAT DID YOU DO NEXT? |
| 6 | A. | Because the prices applied to the volumes of the lower usage customers do not fully |
| 7 | | collect the cost of service, the more customers that are billed on the lower usage |
| 8 | | level options, the more revenues need to be made up by other customers on the |
| 9 | | system. In other words, the lower usage customers are being subsidized. Thus, I |
| 10 | | had to determine the amount of the subsidy and which customers were going to pay |
| 11 | | for that subsidy. |
| 12 | Q. | IS THE FACT THAT LOWER USE CUSTOMERS WOULD NOT COVER |
| 13 | | THEIR RESPECTIVE COST OF SERVICE UNDER PROPOSED RATES |
| 14 | | UNUSUAL OR OUT OF THE ORDINARY? |
| 15 | A. | No, not at all. This reality exists in virtually any rate design proposal. The term |
| 16 | | used to describe this inherent reality is "intra-class subsidy." |
| 17 | Q. | HOW DID YOU ACCOUNT FOR THE INTRA-CLASS SUBSIDY IN YOUR |
| 18 | | PROPOSED RATE DESIGN? |
| 19 | A. | I decided to recover the intraclass subsidy through an equal, additional charge |
| 20 | | applied to the usage charges of both rate options so that both Option A and Option |
| 21 | | B customers are contributing to make up the shortfall. This not only makes up the |
| 22 | | revenue shortfall relative to the identified cost of service of the lower usage |
| 23 | | customers but also minimizes the rate impacts of moving to a new rate design. |
| 24 | | Thus, the new rate design moves the Company's rates closer to its underlying cost |

of service and avoids the significant rate shock associated with immediate implementation of a full cost of service based rate for lower usage customers.

3 Q. CAN THIS RATE STRUCTURE BE EASILY IMPLEMENTED?

A.

A.

Yes. Since both the higher usage and lower usage rate options implement a simple two-part structure (customer charges and volumetric charges), they can be implemented very simply and in a way that is transparent to customers. In fact, a significant advantage of these rate options is that if a customer finds himself or herself on a disadvantageous rate option (the lower usage one versus the higher usage one or vice-versa), he or she can change the rate to better reflect their usage patterns as provided for in the residential gas sales rate schedule. The only restriction would be that customers must remain on one option or the other for a full year. Otherwise, customers could simply choose the lower usage option in the summer and the higher usage option in the winter, which would result in significant revenue erosion to the Company.

But, importantly, the proposed rate design allows the Company to provide customers some choice in their rates.

Q. HOW WILL THE PROPOSED RATE DESIGN AFFECT CUSTOMERS WITH AVERAGE USAGE?

It is anticipated that customers with average usage will not be overly affected regardless of which option they choose, so the Company does not expect significant migration of customers from one option to the other. This can be seen by comparing the annual bills for two customers near the breakpoint between options. Consider a residential customer who uses exactly 360 Ccfs per year. Under the lower usage rate option, the customer's annual bill is \$368.53, the same amount as under the

higher usage rate option. If the customer reduces usage by 90%, to 324 Ccfs per year, there is only a small difference in the annual bill between the customer's most economical rate schedule (Option A) and the alternative (\$348.47 versus \$364.77, or \$1.36 per month). A similar result is obtained if usage increases by 10%. Thus, at the margin, it makes little difference in the customer's annual bill what rate schedule the customer is on, but makes a much more significant difference for the relatively small number of very low- or very high-use customers, who can take advantage of the rate option that best fits their needs. As a result, most customers will not be much affected, and the Company's revenues will not change radically as a result of rate shifts.

A.

At the same time, if a customer were willing to agree to stay on one rate or the other for one year, the choice of which option to be billed under can be his or hers.

Q. HOW WILL THE COMPANY DETERMINE WHICH RATE TO APPLY TO CUSTOMERS INITIALLY?

The Company will initially apply the rate option for the customer based on the rate that appears to be the most economical based on their historical usage and then allow customers to switch if they believe the other rate will better suit them due to changed circumstances or personal preferences, subject to the restriction I mentioned before that they would only be allowed to switch once per year.

| 1 | Q. | DOES ONE GAS HAVE EXPERIENCE WITH THIS TYPE OF RATE |
|----|----|---|
| 2 | | STRUCTURE? |
| 3 | A. | Yes, Oklahoma Natural Gas, another division of ONE Gas, has been serving |
| 4 | | residential and small and large commercial customers under this type of rate design |
| 5 | | for 15 years. |
| 6 | Q. | WHY IS THE COMPANY MAKING THIS RATE DESIGN PROPOSAL |
| 7 | | FOR RESIDENTIAL CUSTOMERS AND NOT FOR OTHER CUSTOMER |
| 8 | | CLASSES? |
| 9 | A. | For two reasons. First, as demonstrated below by an application of Bonbright's |
| 10 | | attributes of a sound rate structure, this is a more fundamentally sound rate structure |
| 11 | | for residential customers than the simple two-part rate applied to all customers that |
| 12 | | it is intended to replace. Second, as will also be demonstrated below, the |
| 13 | | Company's proposal to consolidate three rate areas with different customer and |
| 14 | | usage charges could result in significant negative bill impacts for residential |
| 15 | | customers currently billed under low customer charges and higher usage charges, |
| 16 | | such as those customers who are served in the Company's GCSA incorporated |
| 17 | | service area. This proposal mitigates those impacts, particularly for lower usage |
| 18 | | customers. Furthermore, because the new rate designs that include usage level |
| 19 | | options can be shown to better reflect the Company's cost structure, economic |

efficiency gains should accrue.

20

| 1 | Q. | PLEASE EXPLAIN THE RECOMMENDED RATE DESIGN FOR THE |
|----|----|---|
| 2 | | NON-RESIDENTIAL PROPOSED CGSA TRANSPORT AND SALES |
| 3 | | CLASSES. |
| 4 | A. | Except for cogeneration, I recommend a two-part, single-block rate structure that |
| 5 | | is currently in place in the CTSA incorporated areas. For the cogeneration class, I |
| 6 | | have retained the current four block rate structure to ensure rate continuity. |
| 7 | | When adjusting the customer charges for the classes, I considered both the |
| 8 | | fixed costs per bill determined in the CGSA CCOS study and the current wide |
| 9 | | disparity among customer charges in the service areas. The assigned revenue for |
| 10 | | the class less the revenue recovered from the recommended customer charge is the |
| 11 | | revenue recovered through usage charges for each non-residential class. The |
| 12 | | recommended transportation volumetric rates are the same as the corresponding |
| 13 | | volumetric sales rates for all classes. The customer charge is higher than the |
| 14 | | corresponding sales service charge for each class. |
| 15 | | Current and recommended non-residential rates are shown in Exhibit PHR- |
| 16 | | 2. Current rates are shown in columns (b) through (d) and recommended rates are |
| 17 | | shown in columns (e) and (f). |
| 18 | Q. | ARE YOUR RECOMMENDED NON-RESIDENTIAL RATES FOR THE |
| 19 | | CTSA AND GCSA DEVELOPED IN THE SAME MANNER IF THE TWO |
| 20 | | SERVICE AREAS ARE NOT CONSOLIDATED IN THIS SOI? |
| 21 | A. | Yes, they are. Current and recommended non-residential rates are shown in Exhibit |
| 22 | | PHR-7 for the CTSA and in Exhibit PHR-12 for the GCSA. These rates are |
| 23 | | recommended if the two service areas are not combined in this SOI. |

| 1 | Q. | IN YOUR OPINION, IS YOUR RATE DESIGN JUST AND REASONABLE? |
|----------------|----|--|
| 2 | A. | Yes. |
| 3 | | III. EVALUATION OF THE PROPOSED RATE DESIGNS |
| 4 | Q. | HOW WILL YOU EVALUATE THE RESIDENTIAL RATE DESIGNS |
| 5 | | INTRODUCED IN THE PREVIOUS SECTION? |
| 6 | A. | I will evaluate the rate design proposals by applying a set of objective rate design |
| 7 | | criteria to the current, two-part tariffs and the new, usage level option rate designs |
| 8 | | in turn. The rate design criteria I use for this purpose are those developed by |
| 9 | | Bonbright. ³ |
| 10 | Q. | WHAT ARE BONBRIGHT'S ATTRIBUTES OF A SOUND RATE |
| 11 | | STRUCTURE? |
| 12 | A. | In his seminal work, Principles of Public Utility Rates, Professor Bonbright |
| 13 | | introduces ten attributes of a sound rate structure. Bonbright characterizes these |
| 14 | | attributes as "desirable characteristics of utility performance that regulators should |
| 15 | | seek to compel through edict," and groups the attributes into those related to |
| 16 | | revenues, those related to cost, and those related to practicality. The three revenue- |
| 17 | | related attributes are: ⁴ |
| 18 19 20 | | 1. Effectiveness in yielding total revenue requirements under the fair- return standard without any socially undesirable expansion of the rate base or socially undesirable level of product quality and safety. |
| 21 22 | | 2. Revenue stability and predictability, with a minimum of unexpected changes seriously adverse to utility companies. |
| 23 24 25 | | 3. Stability and predictability of the rates themselves, with a minimum of unexpected changes seriously adverse to the ratepayers and with a sense of historical continuity. |
| | | |

 3 Bonbright, James C., Danielson, Albert L., & Kamerschen, David R., *Principles of Public Utility Rates*. Arlington, VA: Public Utilities Reports, Inc. (1988). 4 *Id.* at 383.

| 1 | | Five a | are related to cost, and these are: |
|----------------------------------|----|--------|---|
| 2 3 | | 4. | Static efficiency of the rate classes and rate blocks in discouraging wasteful use of service while promoting all justified types and amounts of use: |
| 4 5 | | | (a) in the control of the total amounts of service supplied by the company; |
| 6 7 8 | | | (b) in the control of the relative uses of alternative types of service by ratepayers (on-peak versus off-peak service or higher quality versus lower quality service). |
| 9 10 | | 5. | Reflection of all the present and future private and social costs and benefits occasioned by a service's provision (i.e., all internalities and externalities). |
| 11 12 13 14 15 16 | | 6. | Fairness of the specific rates in the apportionment of total costs of service among the different ratepayers so as to avoid arbitrariness and capriciousness and to attain equity in three dimensions: (1) horizontal (i.e., equals treated equally); (2) vertical (i.e., unequals treated unequally); and (3) anonymous (i.e., no ratepayer's demands can be diverted away uneconomically from an incumbent by a potential entrant). |
| 17 18 | | 7. | Avoidance of undue discrimination in rate relationships to be, if possible, compensatory (i.e., subsidy free with no intercustomer burdens). |
| 19 20 | | 8. | Dynamic efficiency in promoting innovation and responding economically to changing demand and supply patterns. |
| 21 | | The f | inal two attributes are related to practicality. These attributes are: ⁶ |
| 22 23 24 | | 9. | The related, practical attributes of simplicity, certainty, convenience of payment, economy in collection, understandability, public acceptability, and feasibility of application. |
| 25 | | 10. | Freedom from controversies as to proper interpretation. |
| 26 | Q. | DOE | S THE COMPANY'S CURRENT RATE STRUCTURE POSSESS THE |
| 27 | | FIRS | TT TWO OF BONBRIGHT'S ATTRIBUTES? |
| 28 | A. | No, a | s explained in the previous section of my testimony, it does not. |

⁵ *Id.* at 383-84. ⁶ *Id.* at 384.

| 1 | Q. | DOES THE CURRENT RATE STRUCTURE COME UP SHORT FROM |
|----|----|--|
| 2 | | THE PERSPECTIVE OF ANY OF THE OTHER ATTRIBUTES LISTED |
| 3 | | ABOVE? |
| 4 | A. | Yes. One of the critical features of a mismatch between cost incurrence and cost |
| 5 | | recovery of the type exhibited by the Company's rate structure is that it builds |
| 6 | | subsidies into the prices faced by consumers for the delivery of natural gas. |
| 7 | | Specifically, by collecting costs that have been identified as fixed in volumetric |
| 8 | | rates, it is a mathematical certainty that larger users of the natural gas distribution |
| 9 | | system will pay more than the identified cost to serve them and will subsidize lower |
| 10 | | usage customers. At the same time, all consumers will pay more than the identified |
| 11 | | cost to serve them during the heating season when usage is highest, resulting in the |
| 12 | | potential for considerable bill impacts during winter months. Thus, TGS's current |
| 13 | | rate structure can also be said to violate the static efficiency standard (attribute 4), |
| 14 | | the fairness standard (attribute 6) and the avoidance of undue discrimination |
| 15 | | standard (attribute 7). |
| 16 | Q. | IN CONTRAST, HOW DOES THE A/B RATE DESIGN THAT YOU |
| 17 | | PROPOSE PERFORM WHEN EVALUATED BY BONBRIGHT'S |
| 18 | | CRITERIA? |
| 19 | A. | The proposed usage level rate designs are superior to the Company's existing rate |
| 20 | | designs when measured against each of the three revenue-related criteria |
| 21 | | established by Bonbright. |
| 22 | Q. | PLEASE EXPLAIN. |
| 23 | A. | The first evaluation I have performed measures the effectiveness of the rate |
| 24 | | structure in vielding total revenue requirements under the fair-return standard |

without any socially undesirable expansion of the rate base or socially undesirable level of product quality and safety. Consider first the rate structure's ability to yield total revenue requirements under the fair-return standard. The Company's proposed usage level rate designs will clearly better satisfy this objective than the Company's current rate designs for three reasons. First, as I discussed earlier, the Company's CCOS study demonstrates that almost 100% of the costs of serving customers are fixed, but 35% of those costs are collected through volumetric charges. Since natural gas usage has historically declined and is forecast to continue to decline, existing volumetric-based rate designs will increasingly undercollect Commission-authorized levels of revenues and put financial pressure on the Company.

A.

Q. IS THERE MORE TO THE FIRST ATTRIBUTE THAN THE SIMPLE ABILITY TO RECOVER COST?

Yes. The two additional features of this attribute are: the ability of the rate to collect the desired level of revenues without any socially undesirable expansion of the rate base and the ability of the rate to collect the desired level of revenues without providing a socially undesirable level of product quality and safety. In either case, one is concerned with sending a price signal that is too low so that either wasteful consumption occurs, or insufficient revenues are generated to allow the Company to maintain appropriate quality of service levels.

| 1 | Q. | HOW CAN YOU DETERMINE WHETHER A PARTICULAR RATE |
|----|----|---|
| 2 | | DESIGN WILL LEAD TO SOCIALLY UNDESIRABLE LEVELS OF |
| 3 | | CONSUMPTION? |
| 4 | A. | There are two factors that one can consider when making such a determination: The |
| 5 | | Company's cost of providing service; and the incentives that are provided to the |
| 6 | | Company to promote consumption or conservation. |
| 7 | Q. | WHAT DOES THE COMPANY'S COST OF SERVICE TELL US ABOUT |
| 8 | | WHETHER THE USAGE LEVEL RATE DESIGNS WILL PROMOTE |
| 9 | | SOCIALLY UNDESIRABLE LEVELS OF CONSUMPTION? |
| 10 | A. | Given the level of revenues collected from fixed and variable components of each |
| 11 | | rate and the corresponding fixed and variable costs as identified by the Company's |
| 12 | | CCOS study filed in this case, it is clear that intraclass subsidies are still an element |
| 13 | | of the proposed usage level rate designs. These subsidies will tend to promote |
| 14 | | socially undesirable levels of consumption. However, the proposed usage level rate |
| 15 | | designs reduce the subsidies to the extent practicable, given the desire to minimize |
| 16 | | rate shock among the Company's residential customers, and will therefore promote |
| 17 | | a more economically efficient level of consumption than the Company's current |
| 18 | | two-part rates. |
| 19 | Q. | HOW CAN YOU DETERMINE WHETHER A PARTICULAR RATE |
| 20 | | DESIGN WILL LEAD TO SOCIALLY UNDESIRABLE LEVELS OF |
| 21 | | PRODUCT QUALITY AND SAFETY? |
| 22 | A. | For purposes of responding to this question, I assume that the level of revenues |
| 23 | | associated with the Company's authorized return is the level of revenues that |
| 24 | | corresponds to a socially desirable level of product quality and safety. In other |

| 1 | | words, when the Company earns its authorized return, as determined by this |
|----|----|--|
| 2 | | Commission in setting the Company's rates, it is earning revenues that enable it to |
| 3 | | maintain a socially desirable level of product quality and safety. |
| 4 | Q. | WHAT THEN DOES AN ANALYSIS OF THE COMPANY'S EMBEDDED |
| 5 | | COSTS TELL US ABOUT THE COMPANY'S CURRENT RATE |
| 6 | | DESIGNS? |
| 7 | A. | This analysis demonstrates that there are subsidies in the Company's current rate |
| 8 | | designs such that low users are consuming more than economically efficient levels |
| 9 | | and large users are consuming less than the economically efficient level. |
| 10 | Q. | DO THE COMPANY'S RATE STRUCTURES ENCOURAGE LOW USAGE |
| 11 | | CUSTOMERS TO USE MORE AND HIGHER USERS TO USE LESS? |
| 12 | A. | Yes. Consider, for example, a low use customer who uses natural gas solely for |
| 13 | | cooking. The Company maintains the same infrastructure for that customer as it |
| 14 | | does for the customer who heats his home and water with natural gas, but the |
| 15 | | cooking customer pays for only a fraction of that infrastructure. Thus, the cooking- |
| 16 | | only customer receives a significant subsidy from all other customers on the system. |
| 17 | | Under current rate structures, the only way for the low use customer to |
| 18 | | compensate the Company for the infrastructure it has installed to serve him is to |
| 19 | | use more natural gas. This can be accomplished in two ways. First, the customer |
| 20 | | can use his existing appliances more intensively, but it is unlikely that the customer |
| 21 | | will cook more meals or dry more clothes simply because the price is low. Thus, |
| 22 | | the only realistic action that a low use customer can take is to install more natural |
| 23 | | gas appliances. |
| | | |

| 1 | | But now consider what happens under the Company's existing rate |
|----|----|--|
| 2 | | structures after this change: the one-time low usage customer, who would now, |
| 3 | | likely, be a space-heating customer, is now a higher usage customer and now |
| 4 | | provides the subsidy. Thus, the impact of the Company's current rate structures is |
| 5 | | to (uneconomically) encourage low-use customers to come on and stay on the |
| 6 | | system and to discourage high usage/space heating customers from coming on the |
| 7 | | system, forcing them instead to choose alternative, and potentially less |
| 8 | | economically efficient, energy sources. |
| 9 | Q. | SINCE THE PROPOSED USAGE LEVEL OPTIONS RELY MORE |
| 10 | | HEAVILY ON CUSTOMER-RELATED CHARGES TO COLLECT |
| 11 | | COMMISSION-AUTHORIZED REVENUES, WILL THIS DISCOURAGE |
| 12 | | THE COMPANY FROM PROMOTING ECONOMICALLY EFFICIENT |
| 13 | | CONSERVATION? |
| 14 | A. | No. A rate structure that is dominated by customer-related charges will provide |
| 15 | | stronger incentives for the utility to promote conservation than will a rate structure |
| 16 | | that relies heavily on volumetric charges, as explained more fully below. |
| 17 | | Furthermore, because the charges better match the costs of providing service, |
| 18 | | consumers receive a more accurate price signal of the consequences of their |
| 19 | | consumption decisions to use more or to use less. |

| 1 | Q. | WHY WILL A RATE STRUCTURE WITH A HIGHER CUSTOMER- |
|----|----|--|
| 2 | | RELATED CHARGE PROVIDE STRONGER INCENTIVES FOR THE |
| 3 | | UTILITY TO PROMOTE CONSERVATION THAN A RATE STRUCTURE |
| 4 | | WITH HIGHER VOLUMETRIC CHARGES? |
| 5 | A. | Under a volumetric-based rate, utilities rely on static or increasing consumption to |
| 6 | | maintain their financial health. Rate structures such as the one that I propose here |
| 7 | | provide a stronger incentive for utilities to promote conservation because they |
| 8 | | "decouple" the utility's volumetric sales from its profitability. Thus, the utility is |
| 9 | | not penalized in the form of decreased earnings for encouraging the efficient use of |
| 10 | | natural gas. This "conservation penalty" associated with traditional rate structures |
| 11 | | has been recognized by the National Association of Regulatory Utility |
| 12 | | Commissioners, State Regulatory Authorities throughout the country, the American |
| 13 | | Gas Association and the Natural Resources Defense Council. |
| 14 | Q. | WHY IS IT IMPORTANT THAT A RATE DESIGN PROVIDE |
| 15 | | CONSUMERS WITH A MORE ACCURATE PRICE SIGNAL OF THE |
| 16 | | CONSEQUENCES OF THEIR CONSUMPTION DECISIONS TO USE |
| 17 | | MORE OR TO USE LESS? |
| 18 | A. | It is the job of a rate structure to provide the correct price signal. Consumers can |
| 19 | | then use the cost information contained in the rate and make consumption trade- |
| 20 | | offs between the cost of energy and the costs of durable goods to make |
| 21 | | economically efficient consumption decisions, which may even result in more |
| 22 | | consumption of natural gas. In my opinion, signaling to consumers that the |
| 23 | | consumption of more distribution service has significant cost consequences is |

| 1 | | misleading and unwise when all cost bases for all economic time horizons indicate |
|----|----|---|
| 2 | | this not to be the case. |
| 3 | Q. | WHICH OF THE RATE STRUCTURES PROVIDES MORE STABLE AND |
| 4 | | PREDICTABLE REVENUES FOR TEXAS GAS SERVICE? |
| 5 | A. | As discussed above, revenue stability and predictability will be enhanced under the |
| 6 | | proposed usage level rate designs because they better reflect cost causation so that |
| 7 | | as volumes change as a result of conservation, efficiency gains or warm weather, |
| 8 | | the revenues and costs will be more synchronized. |
| 9 | Q. | WHICH OF THE RATE STRUCTURES PROVIDES MORE STABLE AND |
| 10 | | PREDICTABLE RATES FOR TEXAS GAS'S CUSTOMERS? |
| 11 | A. | Rate stability and predictability are often referred to as rate continuity. In the |
| 12 | | context of this rate proposal, there are two dimensions to rate continuity. The first |
| 13 | | is the degree to which rates remain stable and predictable as they are being |
| 14 | | implemented. Clearly, because the introduction of any new rate design leads to |
| 15 | | different rates, there is an element of rate discontinuity, simply because rates |
| 16 | | themselves have changed. However, as described in the previous section of my |
| 17 | | testimony, the usage level rate designs have been developed to mitigate significant |
| 18 | | bill increases, so there are also benefits to the proposed rate structure from a rate |
| 19 | | continuity standpoint. |
| 20 | | The second dimension to rate continuity is the degree to which rates remain |
| 21 | | stable and predictable after they are implemented. In this case, the new rate designs |
| 22 | | are vastly superior to the existing rate designs because they will not change due to |
| 23 | | the volume declines documented above. |

In addition, under the current rate design, prices are the highest in the 2 winter, when natural gas prices are also likely to be higher. Thus, after 3 implementation, not only will the proposed usage level rate designs be more stable and more predictable for customers, but they could also produce additional benefits in the form of lower arrearages and less disconnects.

A.

A.

6 Q. TURNING NOW TO THE COST-BASED ATTRIBUTES, WHAT DOES 7 THE STATIC EFFICIENCY ATTRIBUTE REQUIRE?

The static efficiency attribute requires that customers receive a cost-based price signal. This in turn requires that the price includes all costs, but no "extra" costs such as are imposed when a subsidy is extracted, and no "discounts" such as are provided when a subsidy is received. In order to satisfy this rate design attribute, it is necessary to eliminate three kinds of subsidies: interclass, intra-class and seasonal.

14 WHY IS IT IMPORTANT THAT CUSTOMERS RECEIVE A PRICE Q. 15 SIGNAL FREE FROM SUBSIDIES?

Those groups that are receiving subsidies are receiving service at less than cost and will therefore engage in wasteful consumption. Conversely, those groups that are providing the subsidies (i.e., paying rates that result in a return to the Company greater than the system average return) will consume less than their economically efficient level of consumption. This has efficiency consequences for all related economic sectors such as electricity and durable goods. In this context, the "groups" we are concerned with are customer classes (to measure interclass subsidies), customers who consume different amounts of energy within the same

| 1 | | class (to measure intra-class subsidies) and customers who have different seasonal |
|----|----|--|
| 2 | | load patterns within the same class (to measure seasonal subsidies). |
| 3 | Q. | IS YOUR PROPOSED A/B RATE DESIGN BETTER AT ELIMINATING |
| 4 | | INTERCLASS SUBSIDIES THAN THE COMPANY'S CURRENT TWO- |
| 5 | | PART RATE? |
| 6 | A. | No, because this issue is addressed by the allocation of the revenue deficiency, for |
| 7 | | which the Company has chosen Revenue Allocation Three, as described above. |
| 8 | Q. | IS YOUR PROPOSED A/B RATE DESIGN BETTER AT ELIMINATING |
| 9 | | INTRA-CLASS SUBSIDIES THAN THE COMPANY'S CURRENT TWO- |
| 10 | | PART RATE? |
| 11 | A. | Yes, because they better match the identified cost of service, usage level rate |
| 12 | | designs will better eliminate the intra-class subsidies inherent in the current, |
| 13 | | volume-based rate structure that the Company currently has in place. |
| 14 | Q. | WHICH OF THE RATE DESIGNS FARES BETTER FROM THE |
| 15 | | STANDPOINT OF ELIMINATING SEASONAL SUBSIDIES? |
| 16 | A. | Because traditional rate designs collect fixed costs in volumetric rates, it is a |
| 17 | | mathematical certainty that residential consumers are paying more for the delivery |
| 18 | | of natural gas in the winter than their cost of service. The opposite situation prevails |
| 19 | | in the summer when customers receive a subsidy, on average, of about the same |
| 20 | | amount. This analysis demonstrates another flaw in the current rate designs that is |
| 21 | | corrected by the usage level rate option. Consumers are paying unnecessarily high |
| 22 | | winter bills for the distribution of natural gas at just the time when they need the |
| 23 | | most relief from higher bills. One of the benefits for Option B customers is that the |
| 24 | | seasonal volatility is largely eliminated. On the other hand, Option A customers |

| 1 | | are not large users and are less likely to experience the seasonal volatility in the |
|----|----|---|
| 2 | | first place, so both types of customers benefit. |
| 3 | Q. | BESIDES ELIMINATING SUBSIDIES, ARE THERE OTHER RATE |
| 4 | | DESIGN FEATURES THAT ARE REQUIRED BY THE STATIC |
| 5 | | EFFICIENCY ATTRIBUTE? |
| 6 | A. | Yes. The rate design must discourage wasteful use and encourage all justified types |
| 7 | | and amounts of use. This attribute requires first that the rate design provide an |
| 8 | | economically efficient price signal. As demonstrated above, the proposed usage |
| 9 | | level rate designs better match the costs of providing service than the Company's |
| 10 | | current rate designs and are therefore better able to provide such a price signal. This |
| 11 | | attribute also requires that the Company be provided with the proper financial |
| 12 | | incentives to the extent market interventions are desired to promote conservation |
| 13 | | of natural gas. Again, the discussion above indicates that, to the extent such |
| 14 | | interventions are desired, the proposed usage level rate designs will provide the |
| 15 | | Company with better incentives to make those interventions without financial |
| 16 | | penalty. |
| 17 | Q. | YOU INDICATE ABOVE THAT THE STATIC EFFICIENCY ATTRIBUTE |
| 18 | | ALSO REQUIRES THAT THE RATE PROVIDE THE PROPER PRICE |
| 19 | | SIGNAL FOR CONSUMERS TO CHOOSE BETWEEN HIGHER |
| 20 | | QUALITY AND LOWER QUALITY SERVICE. WHICH OF THE |
| 21 | | COMPETING RATE DESIGNS BETTER SATISFIES THIS FEATURE OF |
| 22 | | THE ATTRIBUTE? |
| 23 | A. | Since the residential class either does not have lower quality services available to |
| 24 | | it or does not have a lower cost service available at a commensurately lower price, |

1

- neither of the competing rate designs will influence the economic decision to transport or to take interruptible service.
- 3 Q. WHAT ARE INTERNALITIES AND EXTERNALITIES?
- A. They are effects on one party that emanate from the action of another party. When the effect is positive, an internality has been said to have been created; when negative, an externality. In the context of energy usage, externalities associated with pollution are often cited as being particularly important.
- 8 Q. WHY ARE THEY IMPORTANT IN THE RATE SETTING PROCESS?
- 9 A. They are important because externalities have a cost and they impose that cost on the non-cost-causer. Thus, the cost of the consumption decision to the consumer is understated by the value of the externality. When costs are understated (or overstated) economically efficient decision-making is thwarted and too much (or too little) consumption occurs.
- Q. WHICH OF THE COMPETING RATE DESIGNS BETTER CAPTURES
 INTERNALITIES AND EXTERNALITIES?
- A. Because both rate designs are designed to recover the same level of revenues, both reflect an equal number of internalities and externalities. However, the ability of the proposed usage level rate design to provide better incentives to the utility to encourage energy efficient investments (thereby implicitly recognizing whatever pollution externalities might exist) makes it a better rate design.
- 21 Q. WHAT DOES THE FAIRNESS ATTRIBUTE REQUIRE?
- A. The fairness attribute requires that rates be equitable. Bonbright addresses three dimensions of equity: horizontal, vertical, and anonymous.

| 1 Q. WHAT DOES HORIZONTAL EQUITY REQUI |
|--|
|--|

- 2 A. Horizontal equity requires that equals be treated equally. Specifically, it requires
- 3 that if there are two consumers who take the same quality of service at the same
- 4 level, they pay the same.

5 Q. WHAT IS VERTICAL EQUITY?

- 6 A. Vertical equity is a measure of fairness that requires that unequals be treated
- 7 differently. Consistent with the discussion from above, it requires that if two
- 8 consumers take service that costs the utility different amounts to provide, then they
- 9 should pay something different for that service.

10 Q. WHAT IS ANONYMOUS EQUITY?

- 11 A. Anonymous equity is another concept of fairness that requires that no ratepayer's
- demands be diverted away uneconomically from the incumbent supplier. This is
- particularly relevant for natural gas companies such as TGS, since natural gas has
- readily available substitutes for each of its end-uses.

15 Q. HOW DO THE CANDIDATE RATE DESIGN OPTIONS PERFORM

16 AGAINST THESE EQUITY CRITERIA?

- 17 A. To the extent that the proposed usage level rate design is better at eliminating
- subsidies of all types and to the extent that this rate design more accurately reflects
- the costs of service, it is clear that the proposed usage level rate design will be fairer
- 20 than TGS's current rate designs. One of the benefits of customer choice is that the
- customer gets to choose the rate that they believe is most fair.

| 1 | Q. | WHAT IS REQUIRED BY THE AVOIDANCE OF UNDUE | | | | |
|----|----|--|--|--|--|--|
| 2 | | DISCRIMINATION ATTRIBUTE? | | | | |
| 3 | A. | The avoidance of undue discrimination attribute requires that each customer class | | | | |
| 4 | | pay its fair share of costs and no more. Specifically, it requires that there be no | | | | |
| 5 | | interclass, intra-class and seasonal subsidies. As I have shown above, each of these | | | | |
| 6 | | is reduced under the Company's usage level rate design proposals. | | | | |
| 7 | Q. | WHAT IS DYNAMIC EFFICIENCY? | | | | |
| 8 | A. | In the context of Bonbright's criteria, dynamic efficiency refers to the rate | | | | |
| 9 | | structure's ability to provide the correct long run price signal to foster the | | | | |
| 10 | | economically correct consumption decisions and then to continue to provide the | | | | |
| 11 | | correct long run price signal after those consumption decisions have manifested | | | | |
| 12 | | themselves in the form of new load levels. | | | | |
| 13 | Q. | HOW CAN ONE BE CERTAIN THAT A RATE STRUCTURE PROMOTES | | | | |
| 14 | | DYNAMIC EFFICIENCY? | | | | |
| 15 | A. | Economic theory argues that a rate structure that is based on the long run marginal | | | | |
| 16 | | cost of providing service will promote dynamic efficiency. | | | | |
| 17 | Q. | WHAT ARE THE CONSEQUENCES OF A RATE STRUCTURE THAT | | | | |
| 18 | | DOES NOT PROMOTE DYNAMIC EFFICIENCY? | | | | |
| 19 | A. | It is easiest to explain this concept by example. Consider making energy efficiency | | | | |
| 20 | | investments based on the Company's current rate design. This rate design signals | | | | |
| 21 | | consumers that each Ccf they conserve is worth between \$0.12061 and \$0.45616, | | | | |
| 22 | | even though the cost of service study indicates that these conserved Ccfs are worth | | | | |
| 23 | | a fraction of this amount. Assume now that a consumer makes an energy efficiency | | | | |

investment based on these numbers. Between rate cases, this investment pays off

24

| 1 | | at the indicated volumetric rate. However, when rates are reset at the next rate case, |
|----|----|--|
| 2 | | the Company has not saved the equivalent of the indicated retail rate amount, but |
| 3 | | something closer to \$0.003/Ccf. Thus, rates are set to collect these lost revenues, |
| 4 | | the volumetric rate increases, and the return on the efficiency investment declines. |
| 5 | | Setting rates closer to cost of service, as usage level rate designs do, will ensure |
| 6 | | that this does not happen. |
| 7 | Q. | PLEASE DISCUSS THE PRACTICALITY ATTRIBUTES THAT CAN BE |
| 8 | | USED TO EVALUATE A PROPOSED RATE DESIGN. |
| 9 | A. | The practicality attributes are simplicity, certainty, convenience of payment, |
| 10 | | economy in collection, understandability, public acceptability, and feasibility of |
| 11 | | application. |
| 12 | Q. | HOW DO THE COMPETING RATE DESIGNS COMPARE FROM THE |
| 13 | | STANDPOINT OF THESE PRACTICALITY ATTRIBUTES? |
| 14 | A. | For the most part, these criteria favor neither rate design. For example, I would |
| 15 | | consider the attributes of convenience of payment, economy in collection, |
| 16 | | understandability, public acceptability and feasibility of application to be equally |
| 17 | | satisfied by both rate designs. |
| 18 | | With respect to the simplicity criterion, one could argue that a rate design |
| 19 | | that is more heavily weighted toward fixed charges is simpler than the Company's |
| 20 | | current rate design. However, gradualism considerations dictate that the final rate |
| 21 | | design incorporate both fixed and variable cost components. |
| 22 | | Finally, I would argue that the proposed usage level rate designs incorporate |
| 23 | | far more certainty than the Company's current rate design due to the volatility of |
| 24 | | usage with respect to weather. Because of this, I believe that these practicality |

| 1 | | attributes favor the proposed usage level rate designs over the Company's current | | | |
|----------------------------------|----|--|--|--|--|
| 2 | | rate designs. However, neither dominates and these are secondary criteria in any | | | |
| 3 | | case. | | | |
| 4 | Q. | DO YOU HAVE CONCERNS THAT CUSTOMERS WILL | | | |
| 5 | | MISINTERPRET THE RATE DESIGNS? | | | |
| 6 | A. | No. Both proposals are rate designs that customers are well-accustomed to seeing | | | |
| 7 | | and responding to. Therefore, the selection of the best rate design for TGS's | | | |
| 8 | | customers in Texas cannot be decided based on how well each one satisfies this | | | |
| 9 | | criterion. However, in all fairness, this criterion is, at best, of secondary importance | | | |
| 10 | | and should not be used to select between competing rate designs unless one of the | | | |
| 11 | | alternatives is simply not understandable. | | | |
| 12 | Q. | PLEASE SUMMARIZE YOUR EVALUATION OF THE COMPANY'S | | | |
| 13 | | CURRENT RATE DESIGNS AND THE PROPOSED USAGE LEVEL RATE | | | |
| 14 | | OPTIONS IN THIS CASE BY USING BONBRIGHT'S SOUND RATE | | | |
| 15 | | DESIGN CRITERIA. | | | |
| 16 | A. | Based on the above discussion, the proposed usage level rate designs are superior | | | |
| 17 | | to the Company's current rate designs. The following attributes unequivocally | | | |
| 18 | | favor the proposed usage level rate designs: | | | |
| 19 20 21 22 23 24 | | 1. Effectiveness in yielding total revenue requirements. The proposed usage level rate designs will better satisfy this objective because they will better match fixed costs with fixed charges, they will reduce intra-class subsidies relative to current rate designs, they better match the costs of providing service and they provide the Company with better incentives to pursue conservation. | | | |
| 25 26 27 | | 2. Revenue stability and predictability. The proposed usage level rate designs better reflect cost causation and better match seasonal costs to seasonal revenues | | | |

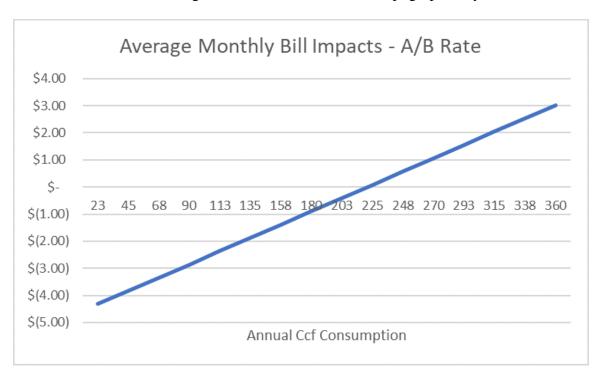

1 3. Rate stability and predictability. The proposed usage level rate designs 2 incorporate more fixed charges and therefore result in more stable and more 3 predictable bills to customers. 4 4. Static efficiency. The proposed usage level rate designs promote static efficiency by better reducing intra-class and seasonal subsidies than the 5 6 Company's current declining block-based rate designs. 7 5. Incorporation of internalities and externalities. The proposed usage level 8 rate design better meets this standard than the Company's current rate 9 design because of its ability to provide better incentives to the utility to 10 encourage energy efficient investments (thereby implicitly recognizing 11 whatever pollution externalities might exist). Fairness. Because it eliminates subsidies of all types and because it more 12 6. 13 accurately reflects the costs of service, the proposed usage level rate design better satisfies this standard than the Company's current rate design. 14 15 7. Avoidance of undue discrimination. Undue discrimination is avoided under 16 the proposed usage level rate designs. 17 8. Dynamic efficiency. Dynamic efficiency is enhanced under the proposed usage level rate designs because they more closely track the costs of service. 18 19 9. Practicality. The practicality attributes favor the proposed rate design over the Company's current rate designs because the proposed usage level rate 20 21 design incorporates far more certainty than the Company's current rate 22 design. 23 In only one case does an evaluation of the two competing rate designs lead to no 24 clear-cut winner: 25 10. Freedom from controversies as to proper interpretation. Both proposals are 26 straightforward rate designs that customers are well accustomed to seeing 27 and responding to. 28 IV. PROOF OF REVENUE 29 HAVE YOU PREPARED A PROOF OF REVENUE TO SHOW THAT THE Q. 30 PROPOSED CGSA RECOMMENDED RATES MEET THE REQUIRED **ASSOCIATED CLASS** 31 **REVENUE** WITH **YOUR REVENUE ALLOCATION?** 32 33 A. Yes. An arithmetical demonstration that the recommended proposed CGSA rates 34 meet the assigned revenue for each class and for the entire service area is provided

| 1 | | in Exhibit PHR-3. As a result of usage charges being limited to five digits in |
|----|----|--|
| 2 | | designing rates, there are small rounding differences for the various customer |
| 3 | | classes, as shown in Exhibit PHR-3. |
| 4 | Q. | HAVE YOU PREPARED A PROOF OF REVENUE TO SHOW THAT THE |
| 5 | | SEPARATE CTSA AND GCSA RECOMMENDED RATES MEET THE |
| 6 | | REQUIRED REVENUE ASSOCIATED WITH YOUR CLASS REVENUE |
| 7 | | ALLOCATIONS IN EACH AREA IF THE TWO SERVICE AREAS ARE |
| 8 | | NOT COMBINED? |
| 9 | A. | Yes. The proof that the recommended GCSA and CTSA rates meet the assigned |
| 10 | | revenue for each class in each area is provided in Exhibit PHR-8 for the CTSA and |
| 11 | | Exhibit PHR-13 for the GCSA. These exhibits are based on separate rates for the |
| 12 | | CTSA and the GCSA based on the separate revenue requirements and class revenue |
| 13 | | allocations if consolidation of the two service areas is not approved. |
| 14 | | V. <u>CUSTOMER BILL IMPACTS</u> |
| 15 | Q. | HAVE YOU CALCULATED CUSTOMER BILL IMPACTS RESULTING |
| 16 | | FROM YOUR RECOMMENDED CGSA RATES? |
| 17 | A. | Yes. Exhibit PHR-4 provides proposed CGSA customer bill impacts for each |
| 18 | | service offering for average monthly usage and average January usage. The bills |
| 19 | | for sales service offerings are based on current and recommended rates and include |
| 20 | | the test year average cost of gas and applicable conservation adjustment tariff rates. |
| 21 | Q. | PLEASE DESCRIBE HOW THE USAGE LEVEL RATE DESIGNS AVOID |
| 22 | | SIGNIFICANT RATE SHOCK. |
| 23 | A. | This can be demonstrated in two ways. First, the rate impacts from implementation |
| 24 | | of this rate design for the range of weather-normalized consumption observed for |

residential customers in the rate areas to be consolidated can be calculated. These calculations are shown in Exhibit PHR-5.

However, these bill impacts show the combined effect of the consolidation, the required revenue increase and the change from traditional two-part rates to the proposed A/B rates. A better way to show the impact of the rate design change is to compare the proposed A/B rates to the Company's traditional rates, adjusted to collect the required revenues in this case, thereby developing an "apples-to-apples" comparison. This comparison is provided as Exhibit PHR-6 and shows that the rate design change is mitigating the rate increase by actually reducing bills below levels that they would be if the traditional rate design were continued for lower usage customers in the CTSA and GCSA Environs service areas. Even in the GCSA Incorporated areas, rate impacts as a result of the change in rate structure are modest, at most about \$3/month rate for all users.

The following chart demonstrates this concept graphically:

| 1 | | As can be seen in the graph, the rate structure particularly benefits the lowest usage |
|----|----|--|
| 2 | | customers on the system. |
| 3 | Q. | HAVE YOU CALCULATED CUSTOMER BILL IMPACTS RESULTING |
| 4 | | FROM YOUR RECOMMENDED SEPARATE CTSA AND GCSA RATES |
| 5 | | IF THE TWO SERVICE AREAS ARE NOT COMBINED? |
| 6 | A. | Yes. If rates are to be designed separately for the CTSA and the GCSA based on |
| 7 | | the separate revenue requirements, Exhibit PHR-9 provides the CTSA customer |
| 8 | | bill impacts for each service offering for average monthly usage and average |
| 9 | | January usage. Exhibit PHR-14 provides the corresponding GCSA customer bill |
| 10 | | impacts. Consistent with the analysis of the Residential A/B rate options for the |
| 11 | | CGSA in Exhibit PHR-5 and Exhibit PHR-6, Exhibits PHR-10 and PHR-11 |
| 12 | | provide the detailed CTSA customer bill impacts for the Residential A/B rate |
| 13 | | design option and Exhibits PHR-15 and PHR-16 provide the corresponding GCSA |
| 14 | | customer bill impacts for the Residential A/B rate design option. |
| 15 | Q. | DO YOU HAVE ANY OBSERVATIONS REGARDING THE CUSTOMER |
| 16 | | BILL IMPACTS? |
| 17 | A. | Yes. In reviewing the bill impacts, attention should be focused on the distribution |
| 18 | | of customers in each class. For the residential sales class, approximately 86% of |
| 19 | | the class resides in the CTSA and the remaining 14% in the GCSA. For the |
| 20 | | commercial sales class, approximately 87% resides in the CTSA and the remaining |
| 21 | | 13% in GCSA. For the public authority sales class, approximately 68% resides in |
| 22 | | CTSA, with the remaining 32% residing in the GCSA. All the industrial sales, |
| 23 | | public school space heating sales, irrigation sales and CNG sales customers reside |

| 1 | | in the C15A. For all transportation customers, approximately 90% resides in the |
|----|----|---|
| 2 | | CTSA. |
| 3 | | Furthermore, for all classes in the GCSA, bill impacts will be sizable no |
| 4 | | matter how rates are designed, although they will be much less for residential |
| 5 | | customers to the extent that an A/B rate structure is approved by the Commission. |
| 6 | Q. | DO YOU HAVE ANY COMMENTS ON THE TRANSPORTATION |
| 7 | | CUSTOMER BILL IMPACTS SHOWN IN EXHIBIT PHR-4? |
| 8 | A. | Yes. Transportation customers secure their own gas supplies rather than relying on |
| 9 | | TGS to provide the commodity. While the Company has no way of knowing the |
| 10 | | transportation customer's cost of gas, the transportation bill comparisons in Exhibit |
| 11 | | PHR-4 assume that transportation customers obtain their gas at a cost that is five% |
| 12 | | less than the Company's average gas cost in the test year. These transportation bill |
| 13 | | comparisons provide illustrative approximations of transportation bills and bill |
| 14 | | changes and may or may not reflect the actual impacts experienced by any average- |
| 15 | | use transportation customer. |
| 16 | Q. | DO YOU HAVE ANY COMMENTS ON THE TRANSPORTATION |
| 17 | | CUSTOMER BILL IMPACTS IF THE CONSOLIDATION OF THE CTSA |
| 18 | | AND GCSA IS NOT APPROVED? |
| 19 | A. | Yes. If rates are to be designed separately for the CTSA and the GCSA based on |
| 20 | | the separate revenue requirements, if consolidation of the two service areas is not |
| 21 | | approved, Exhibits PHR-9 and PHR-14 provide transportation customer bill |
| 22 | | impacts in the CTSA and in the GCSA, respectively. As in Exhibit PHR-4, these |
| 23 | | bill impacts assume that transportation customers obtain their gas at a cost that is |
| 24 | | five% less than the Company's average gas cost in the test year. |

| 1 | Q. | DOES THIS CONCLUDE YOUR DIRECT TESTIMONY? |
|---|----|---|
| 2 | A. | Yes, it does. |
| | | |

PAUL H. RAAB

Mr. Raab's consulting focus is on the regulated public utility industry. His experience includes mathematical and economic analyses and system development and his areas of expertise include regulatory change management, load forecasting, supply-side and demand-side planning, management audits, mergers and acquisitions, costing and rate design, and depreciation and life analysis.

PROFESSIONAL EXPERIENCE

Mr. Raab has directed or has had a key role in numerous engagements in the areas listed above. Representative clients are provided for each of these areas in the subsections below.

Regulatory Change Management. Mr. Raab has recently been assisting both electric and natural gas utilities as they prepare to operate in an environment that is significantly different from the one they operate in today. This work has involved the development of unbundled cost of service studies; the development of strategies that will allow companies to prosper in a restructured industry; retail access program development, implementation, and evaluation; and the development of innovative ratemaking approaches to accompany changes in the regulatory structure. Representative clients for whom he has performed such work include:

- Texas Gas Service
- Virginia Natural Gas
- UGI Utilities, Inc. Gas Division, UGI Penn Natural Gas, Inc., and UGI Central Penn Gas, Inc.
- The Peoples Natural Gas Company d/b/a Dominion Peoples
- National Fuel Gas Distribution Corporation
- Columbia Gas of Pennsylvania, Inc.
- o Aquila
- Kansas Corporation Commission
- Atmos Energy Corporation
- o Electric Cooperatives' Association
- o Cleco
- Washington Gas
- Western Resources
- Kansas Gas Service
- Mid Continent Market Center.

Load Forecasting. Mr. Raab has broad experience in the review and development of forecasts of sales forecasts for electric and natural gas utilities. This work has also included the development of elasticity of demand measures that have been used for attrition adjustments and revenue requirement reconciliations. Representative clients for whom he has performed such work include:

- Washington Gas Energy Services
- o Central Louisiana Electric Company
- Washington Gas
- Saskatchewan Public Utilities Review Commission
- Union Gas Limited
- Nova Scotia Power Corporation
- Cajun Electric Power Cooperative
- o Cincinnati Gas & Electric
- Commonwealth Edison Company
- Cleveland Electric Illuminating
- Public Service of Indiana
- Atlantic City Electric Company
- Detroit Edison Company
- o Sierra Pacific Power
- Connecticut Natural Gas Corporation
- Appalachian Power Company
- Missouri Public Service Company
- Empire District Electric Company
- Public Service Company of Oklahoma
- Wisconsin Electric Power Company
- Northern States Power Company
- o Iowa State Commerce Commission
- Missouri Public Service Commission.

Supply Side Planning. Mr. Raab has assisted clients to determine the most appropriate supply-side resources to meet future demands. This assistance has included the determination of optimal sizes and types of capacity to install, determination of production costs including and excluding the resource, and an assessment of system reliability changes as a result of different resource additions. Much of this work for the following clients has been done in conjunction with litigation:

- Enstar Natural Gas
- AGL Resources
- o Washington Gas
- Sovland Electric Cooperative
- Houston Lighting and Power
- City of Farmington, New Mexico
- o Big Rivers Electric Cooperative
- City of Redding, California
- o Brown & Root
- Kentucky Joint Committee on Electric Power Planning Coordination
- Sierra Pacific Power.

Demand Side Planning. Demand Side Planning involves the forecasting of future demands; the design, development, implementation, and evaluation of demand side management programs; the determination of future supply side costs; and the integration

of cost effective demand side management programs into an Integrated Least Cost Resource Plan. Mr. Raab has performed such work for the following clients:

- UGI Utilities
- Dominion Peoples Gas
- National Fuel Gas Distribution Corporation
- Columbia Gas of Pennsylvania
- Kansas Gas Service
- Atmos Energy Corporation
- o Black Hills Gas Company
- Oklahoma Natural Gas Company
- Washington Gas Light Company
- Piedmont Natural Gas Company
- Chesapeake Utilities
- o Pennsylvania & Southern Gas
- Montana-Dakota Utilities.

Management Audits. Mr. Raab has been involved in a number of management audits. Consistent with his other experience, the focus of his efforts has been in the areas of load forecasting, demand- and supply-side planning, integrated resource planning, sales and marketing, and rates. Representative commission/utility clients are as follows:

- Public Utilities Commission of Ohio/East Ohio Gas
- Kentucky Public Service Commission/Louisville Gas & Electric
- New Hampshire Public Service Commission/Public Service Company of New Hampshire
- New Mexico Public Service Commission/Public Service of New Mexico
- New York Public Service Commission/New York State Electric & Gas
- Missouri Public Service Commission/Laclede Gas Company
- New Jersey Board of Public Utilities/Jersey Central Power & Light
- New Jersey Board of Public Utilities/New Jersey Natural Gas
- o Pennsylvania Public Utilities Commission/ Pennsylvania Power & Light
- California Public Utilities Commission/San Diego Gas & Electric Company.

Mergers and Acquisitions. Mr. Raab has been involved in a number of merger and acquisition studies throughout his career. Many of these were conducted as confidential studies and cannot be listed. Those in which his involvement was publicly known are:

- o ONEOK, Inc./Southwest Gas Corporation
- Western Resources
- Constellation.

Costing and Rate Design Analysis. Mr. Raab has prepared generic rate design studies for the National Governor's Conference, the Electricity Consumer's Resource Council, the Tennessee Valley Industrial Committee, the State Electricity Commission of

Western Australia, and the State Electricity Commission of Victoria. These generic studies addressed advantages and disadvantages of alternative costing approaches in the electric utility industry; the strengths and weaknesses of commonly encountered costing methodologies; future tariff policies to promote equity, efficiency, and fairness criteria; and the advisability of changing tariff policies. Mr. Raab has performed specific costing and rate design studies for the following companies:

- New Mexico Gas
- SEMCO Gas
- Enstar Natural Gas
- Atmos Energy Corporation
- Southern Maryland Electric Cooperative, Inc.
- Comcast Cable Communications, Inc.
- Cable Television Association of Georgia
- Devon Energy
- o Aquila
- Oklahoma Natural Gas
- Semco Energy Gas Company
- Laclede Gas
- o Western Resources
- Kansas Gas Service Company
- Central Louisiana Electric Company
- Washington Gas Light Company
- Piedmont Natural Gas Company
- Chesapeake Utilities
- Pennsylvania & Southern Gas
- KPL Gas Service Company
- Allegheny Power Systems
- Northern States Power
- Interstate Power Company
- o lowa-Illinois Gas & Electric Company
- Arkansas Power and Light
- lowa Power & Light
- lowa Public Service Company
- Southern California Edison
- Pacific Gas & Electric
- New York State Electric & Gas
- Middle South Utilities
- Missouri Public Service Company
- Empire District Electric Company
- Sierra Pacific Power
- Commonwealth Edison Company
- South Carolina Electric & Gas
- State Electricity Commission of Western Australia
- State Electricity Commission of Victoria, Australia
- Public Service Company of New Mexico

Tennessee Valley Authority.

Depreciation and Life Analysis. Mr. Raab has extensive experience in depreciation and life analysis studies for the electric, gas, rail, and telephone industries and has taught a course on depreciation at George Washington University, Washington, DC. Representative clients in this area include:

- Champaign Telephone Company
- o Plains Generation & Transmission Cooperative
- CSX Corporation (Includes work for Seaboard Coast Line, Louisville & Nashville, Baltimore & Ohio, Chesapeake & Ohio, and Western Maryland Railroads)
- Lea County Electric Cooperative, Inc.
- North Carolina Electric Membership Cooperative
- Alberta Gas Trunk Lines (NOVA)
- Federal Communications Commission.

TESTIMONY

The following table summarizes Mr. Raab's testimony experience.

In addition, Mr. Raab has presented expert testimony before the Federal Energy Regulatory Commission, the Pennsylvania House Consumer Affairs Committee, the Michigan House Economic Development and Energy Committee and the Province of Saskatchewan. He is a member of the Advisory Board of the Expert Evidence Report, published by The Bureau of National Affairs, Inc.

EDUCATION

Mr. Raab holds a B.A. (with high distinction) in Economics from Rutgers University and an M.A. from SUNY at Binghamton with a concentration in Econometrics. While attending Rutgers, he studied as a Henry Rutgers Scholar.

PUBLICATIONS AND PRESENTATIONS

Mr. Raab has published in a number of professional journals and spoken at a number of industry conferences. His publications/ presentations include:

- "Natural Gas as an Electric DSM Tool," <u>American Gas Association</u> <u>Membership Services Committee Meeting</u>, Williamsburg, VA, September 15, 2009.
- "Electric-to-Gas Fuel Switching," <u>NARUC Summer Meeting</u>, Seattle, WA, July 20, 2009.
- "The Future of Fuel in Virginia: Natural Gas," <u>The Twenty-Seventh National</u> <u>Regulatory Conference</u>, Williamsburg, VA, May 19, 2009.
- "Revenue Decoupling for Natural Gas Utilities," <u>Energy Bar Association</u>
 <u>Midwest Energy Conference</u>, Chicago, IL, March 6, 2008.
- "Responses to Arrearage Problems from High Natural Gas Bills," <u>American</u> <u>Gas Association Rate and Regulatory Issues Seminar</u>, Phoenix, AZ, April 8, 2004.
- "Factors Influencing Cooperative Power Supply," <u>National Rural Utilities</u>
 <u>Cooperative Finance Corporation Independent Borrower's Conference</u>,
 Boston, MA, July 3, 1997.
- "Current Status of LDC Unbundling," <u>American Gas Association Unbundling</u>
 <u>Conference: Regulatory and Competitive Issues</u>, Arlington, VA, June 19, 1997.
- "Balancing, Capacity Assignment, and Stranded Costs," <u>American Gas Association Rate and Strategic Planning Committee Spring Meeting</u>, Phoenix, AZ, March 26, 1997.
- "Gas Industry Restructuring and Changes: The Relationship of Economics and Marketing" (with Jed Smith), <u>National Association of Business</u> <u>Economists</u>, 38th Annual Meeting, Boston, MA September 10, 1996.
- "Improving Corporate Performance By Better Forecasting," <u>1996 Peak Day</u>
 <u>Demand and Supply Planning Seminar</u>, San Francisco, CA, April 11, 1996.
- "Natural Gas Price Elasticity Estimation," <u>AGA Forecasting Review</u>, Vol. 6,
 No. 1, November 1995.
- "Assessing Price Competitiveness," <u>Competitive Analysis & Benchmarking</u> for Power Companies, Washington, DC, November 13, 1995.
- "Avoided Cost Concepts and Management Considerations," Workshop on Avoided Costs in a Post 636 Gas Industry: Is It Time to Unbundle Avoided Cost? Sponsored by the Gas Research Institute and Wisconsin Center for Demand-Side Research, Milwaukee, WI, June 29, 1994.

- "Estimating Implied Long- and Short-Run Price Elasticities of Natural Gas Consumption," <u>Atlantic Economic Conference</u>, Philadelphia, PA, October 10, 1993.
- o "Program Evaluation and Marginal Cost," <u>The Natural Gas Least Cost Planning Conference</u>, Washington, DC, April 7, 1992.
- o "The New Environmentalism & Least Cost Planning," Institute for Environmental Negotiation, University of Virginia, May 15, 1991.
- "Development of Conditional Demand Estimates of Gas Appliances," <u>AGA</u>
 <u>Forecasting Review</u>, Vol. 1, No. 1, October 1988.
- "The Feasibility Study: Forecasting and Sensitivities," <u>Municipal</u>
 <u>Wastewater Treatment Facilities</u>, The Energy Bureau, Inc., November 18,
 1985.
- "The Development of a Gas Sales End-Use Forecasting Model," <u>Third International Forecasting Symposium</u>, The International Institute of Forecasting, July 1984.
- "New Forecasting Guidelines for REC's A Seminar," (Chairman), Kansas City, Missouri, June 1984.
- o "A Method and Application of Estimating Long Run Marginal Cost for an Electric Utility," <u>Advances in Microeconomics</u>, Volume II, 1983.
- o "Forecasting Under Public Scrutiny," <u>Forecasting Energy and Demand</u> Requirements, University of Wisconsin - Extension, October 25, 1982.
- "Forecasting Public Utilities," <u>The Journal of Business Forecasting</u>, Vol. 1, No. 4, Summer, 1982.
- o "Are Utilities Underforecasting," <u>Electric Ratemaking</u>, Vol. 1. No. 1, February, 1982.
- "A Polynomial Spline Function Technique for Defining and Forecasting Electric Utility Load Duration Curves," <u>First International Forecasting</u> <u>Symposium</u>, Montreal, Canada, May, 1981.
- o "Time-of-Use Rates and Marginal Costs," <u>ELCON Legal Seminar</u>, March 20, 1980.
- o "The Ernst & Whinney Forecasting Model," <u>Forecasting Energy & Demand</u> Requirements, University of Wisconsin Extension, October 8, 1979.

 "Marginal Cost in Electric Utilities - A Multi-Technology Multi-Period Analysis" (with Frederick McCoy), <u>ORSA/Tims Joint National Meeting</u>, Los Angeles, California, November 13-15, 1978.

CUSTOMER BILL IMPACTS

| | ınge | % | (i) |
|----------------|--------|----------------|-----|
| ary Bill | Chan | \$ | (h) |
| Average Janua | | Recommended | (g) |
| | | Current | (f) |
| | ıge | % | (e) |
| erage Bill | Change | Dollars | (p) |
| Year-Round Ave | | Recommended | (c) |
| | | Current Recomm | (q) |
| | | Description | (a) |

(1) Bill impacts are shown for those schedules with customers during the test year. The test year cost of gas in each area is included in the bill calculations. Bills under current and recommended rates do not include revenue-related taxes. These taxes vary across different locations in the service area.

(2) Bills are based on the following average usage levels:

CGSA

| | Year-Round | January |
|-----------------------------|------------|---------|
| Residential - Rate Option A | 18 | 20 |
| Residential - Rate Option B | 45 | 122 |
| Commercial | 263 | 451 |
| Industrial | 2,565 | 5,228 |
| Public Authority | 419 | 929 |
| Public School Space Heating | 1,927 | 2,295 |
| Compressed Natural Gas | 17 | 30 |

(3) Transportation customers secure their own gas. While the Company has no way of knowing the customer's cost of gas, these bill comparisons assume that customers obtain their gas at a cost that is five percent less than the Company's gas cost. These transportation bill comparisons are only illustrations of the level of total bills and the percentage changes in those bills. Bills are based on the following average usage levels:

| | Year-Round | January |
|--|------------|---------|
| Commercial Transportation | 4,322 | 5,154 |
| ndustrial Transportation | 14,726 | 16,764 |
| Public Authority Transportation | 1,580 | 2,328 |
| Public School Space Heating Transportation | 1,225 | 2,191 |
| Compressed Natural Gas Transportation | 28,168 | 26,196 |
| | | |

| January 323,832 | |
|-----------------------------|--|
| August 339,785 | |
| : | |
| nsportation | |
| Cogeneration Transportation | |

(4) Year-round average bill is approximated based on the average August bill assumed to occur in each of the 5 summer months and the average January bill assumed to occur in each of the 7 winter months. Exhibit PHR-10 Page 1 of 1

(1) Bill impacts are shown for those schedules with customers during the test year. The test year cost of gas in each area is included in the bill calculations. Bills under current and recommended rates do not include (2) Bills are based on the following average usage levels:

| | Year-Round | January |
|------------------|------------|---------|
| Residential | 17 | 42 |
| Commercial | 260 | 376 |
| Public Authority | 492 | 1,160 |

(3) Transportation customers secure their own gas. While the Company has no way of knowing the customer's cost of gas, these bill comparisons assume that customers obtain their gas at a cost that is five percent less than the Company's gas cost. These transportation bill comparisons are only illustrations of the level of total bills and the percentage changes in those bills. Bills are based on the following average levels:

| January | 12,250 | 14,975 |
|------------|---------------------------|---------------------------|
| Year-Round | 7,943 | 14,309 |
| | Commercial Transportation | Industrial Transportation |

| 1 | | DIRECT TESTIMONY OF CHRISTY M. BELL |
|----|----|--|
| 2 | | I. <u>INTRODUCTION AND QUALIFICATIONS</u> |
| 3 | Q. | PLEASE STATE YOUR NAME AND BUSINESS ADDRESS. |
| 4 | A. | My name is Christy M. Bell, and my business address is 1301 South MoPac |
| 5 | | Expressway, Suite 400, Austin, Texas 78746. |
| 6 | Q. | BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY? |
| 7 | A. | I am a Rates Analyst for Texas Gas Service Company ("TGS" or the "Company"), |
| 8 | | which is a Division of ONE Gas, Inc. |
| 9 | Q. | PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND |
| 10 | | PROFESSIONAL EXPERIENCE. |
| 11 | A. | I received a Bachelor of Arts degree from the University of Texas at Austin in 1999. |
| 12 | | Prior to my role at TGS I owned and managed a small business. In April 2017, I |
| 13 | | began my current role with the Company. My responsibilities include preparing |
| 14 | | rate schedules and filing them with the Railroad Commission of Texas |
| 15 | | ("Commission"), filing annual compliance reports with regulators, and preparing |
| 16 | | departmental workpapers for the Commission's quality of service audits. |
| 17 | Q. | WAS THIS TESTIMONY PREPARED BY YOU OR UNDER YOUR |
| 18 | | DIRECT SUPERVISION? |
| 19 | A. | Yes, it was. |
| 20 | Q. | HAVE YOU PREPARED ANY EXHIBITS IN CONNECTION WITH YOUR |
| 21 | | TESTIMONY? |
| 22 | A. | Yes. I have prepared and sponsor the exhibits listed in the table of contents. |

| 1 | Q. | WERE THESE EXHIBITS PREPARED BY YOU OR UNDER YOUR |
|----|----|---|
| 2 | | DIRECTION? |
| 3 | A. | Yes, they were. |
| 4 | Q. | WHAT IS THE PURPOSE OF YOUR TESTIMONY? |
| 5 | A. | The purpose of my testimony is to describe the rate schedules and tariffs currently |
| 6 | | in effect for the Central Texas Service Area ("CTSA"), the Gulf Coast Service Area |
| 7 | | ("GCSA") and the City of Beaumont, Texas. In addition, I describe the rate |
| 8 | | schedules and tariffs which would be applicable for the proposed Central-Gulf |
| 9 | | Service Area ("CGSA") should consolidation as proposed by the Company be |
| 10 | | approved. |
| 11 | Q. | ARE YOU SPONSORING ANY COST OF SERVICE SCHEDULES? |
| 12 | A. | No, I am not. |
| 13 | | II. CURRENT RATE SCHEDULES AND TARIFFS |
| 14 | Q. | WHEN WAS THE LAST GENERAL BASE RATE STATEMENT OF |
| 15 | | INTENT ("SOI") FILED IN THE EXISTING GCSA? |
| 16 | A. | On December 30, 2015, TGS filed a SOI requesting to increase rates within the |
| 17 | | incorporated and environs areas of two previously existing service areas, (1) the |
| 18 | | Galveston Service Area ("GSA") comprised of Bayou Vista, Galveston and |
| 19 | | Jamaica Beach ("GSA Cities") and their environs, and (2) the South Jefferson |
| 20 | | County Service Area ("SJCSA") comprised of Groves, Nederland, Port Arthur, and |
| 21 | | Port Neches ("SJCSA Cities) and their environs. In that case, TGS also requested |
| 22 | | consolidation of the GSA and SJCSA to create the GCSA. The SOI was docketed |

at the Commission as Gas Utilities Docket ("GUD") No. 10488. The cities and

23

1 Commission approved the consolidation request and new rates for the GCSA in $2016.^{1}$ 2 3 Q. HAS THE COMPANY REQUESTED RATE CHANGES WITH THE GCSA 4 **CITIES SINCE THE SOI IN 2015?** 5 Yes. A Cost of Service Adjustment ("COSA") Clause tariff has been in effect for A. 6 the GCSA Cities since April 14, 2017. Pursuant to the terms of the COSA Clause, 7 the Company filed a COSA adjustment with the GCSA Cities on April 28, 2017 8 that included capital investment and expense from a test year ending December 31, 9 2016. The Company has continued to file annual COSA adjustments with the 10 GCSA Cities, most recently on April 30, 2019, that included capital investment and 11 expenses from a test year ending December 31, 2018. WHAT RATES ARE CURRENTLY IN EFFECT IN THE EXISTING GCSA 12 Q. 13 **INCORPORATED AREAS?** 14 A. As shown in Exhibit CMB-1, the rates in effect for customers in the incorporated 15 areas of the GCSA are the rates that the GCSA Cities approved as part of the COSA 16 in 2019.

-

¹ On May 3, 2016, the Commission issued a Final Order approving a settlement agreement reached by the parties. GUD No. 10488, Final Order (May 3, 2016). The GSA and SJCSA Cities approved as follows: Bayou Vista and Galveston approved the settlement agreement via operation of law effective May 3, 2016; Jamaica Beach approved the SOI filing via operation of law effective February 3, 2016; Port Arthur issued Ordinance No. 16-28 dated April 4, 2016; Port Neches issued Ordinance No. 2016-04 dated March 24, 2016; Nederland issued Ordinance No. 2016-13 dated March 28, 2016; and Groves issued Ordinance No. 2016-03 dated April 4, 2016.

1 Q. HAS THE COMPANY REQUESTED INTERIM RATE ADJUSTMENTS

2 ("IRAs") IN THE GCSA ENVIRONS?

- 3 A. Yes. Pursuant to Texas Utilities Code § 104.301 (the "GRIP statute") and
- 4 Commission Rule § 7.7101 (the "GRIP rule"), the Company filed the following
- 5 initial IRAs for the GCSA environs:

| GUD No. | IRA Filing Date | Plant Investment Period | Final Order Issue Date |
|---------|------------------|--------------------------------|------------------------|
| 10666 | October 20, 2017 | January 1 to December 31, 2016 | March 20, 2018 |
| 10781 | October 19, 2018 | January 1 to December 31, 2017 | January 23, 2019 |
| 10857 | June 14, 2019 | January 1 to December 31, 2018 | September 11, 2019 |

6 Q. WHAT RATES ARE CURRENTLY IN EFFECT IN THE EXISTING GCSA

7 ENVIRONS?

- 8 A. As shown in Exhibit CMB-1, the rates in effect for customers in the GCSA environs
- 9 are base rates approved in GUD No. 10488 and the IRAs addressed above.

10 Q. WHEN WAS THE LAST SOI TO CHANGE BASE RATES FILED IN THE

11 EXISTING CTSA?

- 12 A. On June 20, 2016, TGS filed an SOI requesting to change rates within the
- incorporated and environs areas of the legacy Central Texas service area ("CTX")
- and the environs areas of the legacy South Texas Service Area ("STSA").² In
- addition to requesting a change in rates, the Company requested to consolidate the
- 16 CTX and the STSA to create the existing CTSA. The SOI was docketed at the
- 17 Commission as GUD No. 10526. The CTX Cities approved the settlement

² The legacy CTX service area included: Austin, Bee Cave, Buda (environs only), Cedar Park, Dripping Springs, Kyle, Lakeway, Rollingwood, Sunset Valley and West Lake Hills. The legacy STSA included: Cuero, Gonzales, Lockhart, Luling, Nixon, Shiner and Yoakum.

agreement in October, November, and December 2016³ and the Commission approved on November 15, 2016. On December 2, 2016, the Company filed an SOI with the incorporated areas of the legacy STSA requesting to consolidate the legacy STSA incorporated areas with the CTSA and to decrease rates. The STSA Cities approved the consolidation request and rate decrease in December 2016 and January 2017.⁴

7 Q. HAS THE COMPANY REQUESTED IRAS IN THE EXISTING CTSA?

Yes. Pursuant to the GRIP statute and GRIP rule, the Company filed the following
 IRAs with the CTSA incorporated and environs areas:

| GUD No. | IRA Filing Date | Plant Investment Period | Final Order Issue Date |
|---------|-----------------|--------------------------------|------------------------|
| 10610 | March 3, 2017 | January 1 to December 31, 2016 | June 6, 2017 |
| 10703 | March 2, 2018 | January 1 to December 31, 2017 | June 5, 2018 |
| 10824 | March 1, 2019 | January 1 to December 31, 2018 | June 4, 2019 |

10 O. WHAT RATES ARE CURRENTLY IN EFFECT IN THE EXISTING CTSA?

11 A. As shown in Exhibit CMB-1, the rates in effect for customers in the existing CTSA

12 are the base rates approved in GUD No. 10526 and the IRAs addressed above.

and Yoakum issued Ordinance No. 2120 dated December 13, 2016.

³ The CTX Cities approved the settlement agreement as follows: Austin issued Ordinance No. 20161103-077 dated November 3, 2016; Bee Cave issued Ordinance No. 320 dated October 25, 2016; Cedar Park issued Ordinance No. G03.16.11.10.E1 dated November 10, 2016; Dripping Springs issued Ordinance No. 1790.02 dated October 18, 2016; Kyle issued Ordinance No. 913 dated October 18, 2016; Lakeway issued Ordinance No. 2016-10-17-08 dated October 17, 2016; Rollingwood issued Ordinance No. 2016-10-19 dated October 19, 2016; Sunset Valley issued Ordinance No. 161101 dated November 1, 2016; and West Lake Hills issued Ordinance No. 435 dated October 26, 2016.

⁴ The STSA Cities approved the consolidation request and rate decrease as follows: Cuero issued Ordinance No. 2016-24 dated January 13, 2017; Gonzales and Shiner approved via operation of law effective January 6, 2017; Lockhart issued Ordinance No. 2016-29 dated December 20, 2016; Luling issued Ordinance No. 2016-O-11 dated December 8, 2016; Nixon issued Ordinance No. 0-2016-12-12 dated December 12, 2016;

| 1 | Q. | WHAT RATES ARE CURRENTLY IN EFFECT IN THE CITY OF |
|----|----|--|
| 2 | | BEAUMONT? |
| 3 | A. | On May 22, 2019, TGS filed initial rate tariffs within the incorporated areas of |
| 4 | | Beaumont that were identical to the current rates in the neighboring incorporated |
| 5 | | areas of the GCSA to remedy a coding issue in the Company's billing system in |
| 6 | | which two incorporated Beaumont customers were erroneously coded to another |
| 7 | | jurisdiction. As shown in Exhibit CMB-1, the rates in effect for customers in the |
| 8 | | incorporated areas of Beaumont are the initial rates established on May 22, 2019. |
| 9 | Q. | IF THE COMPANY'S REQUEST REGARDING CONSOLIDATION IS |
| 10 | | APPROVED, WHAT TARIFFS WILL BE IN EFFECT FOR CUSTOMERS |
| 11 | | IN THE CTSA, GCSA, AND THE CITY OF BEAUMONT? |
| 12 | A. | If the Company's request to consolidate the incorporated and unincorporated areas |
| 13 | | of the CTSA and GCSA and the incorporated areas of Beaumont to create the |
| 14 | | CGSA is approved, the proposed rate schedules and tariffs would be applicable to |
| 15 | | the entire CGSA, as shown in Exhibit A to the SOI filing. |
| 16 | | If the Company's consolidation request is not approved, the Company |
| 17 | | requests that new rate schedules and tariffs are approved for the GCSA and City of |
| 18 | | Beaumont and new rate schedules and tariffs are approved for the existing CTSA, |
| 19 | | which are also provided in Exhibit A to the SOI filing. |
| 20 | | III. PROPOSED RATE SCHEDULES AND TARIFFS |
| 21 | Q. | WHAT TARIFFS ARE PROPOSED BY THE COMPANY IN THIS SOI? |
| 22 | A. | The proposed CGSA tariffs, attached as Exhibit A to the SOI, are as follows: |
| 23 | | • Rate Schedules 10, 20, 30, 40, 48, 70, C-1, and CNG-1 for gas sales |
| 24 | | service; |

| 1 | • Rate Schedules 1Z, 2Z, 3Z, 4Z, 4H, 7Z, C-1-ENV, and CNG-1-ENV for |
|----|---|
| 2 | gas sales service; |
| 3 | • Rate Schedules T-1, T-1-ENV, T-TERMS for transportation service; |
| 4 | Rate Schedules 1-INC and 1-ENV for the cost of gas clause; |
| 5 | Incorporated and environs Rules of Service; |
| 6 | • Rate Schedule WNA for weather normalization adjustment; |
| 7 | Rate Schedule EDIT-Rider for recovery of the flow back to customers of |
| 8 | the annual amortization of EDIT; |
| 9 | Rate Schedules PIT and PIT-Rider for recovery of annually approved |
| 10 | pipeline integrity testing expenses ⁵ ; |
| 11 | Rate Schedule HARV-Rider for recovery of approved expenses related to |
| 12 | Hurricane Harvey; |
| 13 | Rate Schedules NER and NER-Rider for recovery of operation and |
| 14 | maintenance expenses resulting from natural events; |
| 15 | Rate Schedules RCE and RCE-ENV for recovery of approved rate case |
| 16 | expenses in this filing; and |
| 17 | • Rate Schedule PSF for recovery of the annual fee to support the pipeline |
| 18 | safety functions of the Commission. |
| 19 | The rate schedules for the proposed CGSA accurately reflect all the changes |
| 20 | requested by the Company in this filing. Exhibit CMB-2 provides the existing rate |
| 21 | schedules in redline format to identify the changes the Company proposes for the |

⁵ The Company proposes a new PIT and PIT-Rider for the City of Beaumont and the incorporated and environs areas of the GCSA. The PIT and PIT-Rider are currently in effect in the incorporated and environs areas of the CTSA.

-

| 1 | | proposed consolidated CGSA. Exhibit CMB-3 contains fedimed tariffs for the |
|---|--------------|---|
| 2 | | stand-alone CTSA, stand-alone GCSA and City of Beaumont. |
| 3 | Q. | PLEASE DESCRIBE THE GENERAL APPROACH THE COMPANY |
| 4 | | TOOK IN DEVELOPING THE PROPOSED RATE SCHEDULES. |
| 5 | A. | The Company started with the rate schedules approved in the Company's most |
| 6 | | recent consolidation rate case, GUD No. 10526, for the incorporated and environs |
| 7 | | of the CTSA, and merged applicability for the GCSA and Beaumont, Texas. Next, |
| 8 | | the tariffs and rate schedules approved in recent rate cases, GUD Nos. 10656, 10739 |
| 9 | | and 10766, were reviewed to identify applicable tariff provisions and language to |
| 10 | | include in the proposed CGSA tariffs. Should consolidation be approved in this |
| 11 | | SOI, the overall number of tariffs that must be maintained and administered will be |
| 12 | | reduced. |
| | | |
| 13 | Q. | PLEASE DESCRIBE THE PROPOSED CGSA GAS SALES RATE |
| 13 14 | Q. | PLEASE DESCRIBE THE PROPOSED CGSA GAS SALES RATE SCHEDULES. |
| | Q. A. | |
| 14 | | SCHEDULES. |
| 14 15 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing |
| 14 15 16 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing CTSA gas sales rate schedules and incorporate approved changes from GUD Nos. |
| 14 15 16 17 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing CTSA gas sales rate schedules and incorporate approved changes from GUD Nos. 10656, 10739 and 10766, with revisions made to: |
| 14 15 16 17 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing CTSA gas sales rate schedules and incorporate approved changes from GUD Nos. 10656, 10739 and 10766, with revisions made to: 1. include all CTSA Cities, GCSA Cities and the City of Beaumont in the |
| 114 115 116 117 118 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing CTSA gas sales rate schedules and incorporate approved changes from GUD Nos. 10656, 10739 and 10766, with revisions made to: 1. include all CTSA Cities, GCSA Cities and the City of Beaumont in the "Territory" section in the incorporated tariffs and to include all CTSA |
| 114 115 116 117 118 119 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing CTSA gas sales rate schedules and incorporate approved changes from GUD Nos. 10656, 10739 and 10766, with revisions made to: 1. include all CTSA Cities, GCSA Cities and the City of Beaumont in the "Territory" section in the incorporated tariffs and to include all CTSA environs, GCSA environs and Beaumont, Texas environs in the "Territory" |
| 114 115 116 117 118 119 220 | | SCHEDULES. Rate Schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H are based on the existing CTSA gas sales rate schedules and incorporate approved changes from GUD Nos. 10656, 10739 and 10766, with revisions made to: 1. include all CTSA Cities, GCSA Cities and the City of Beaumont in the "Territory" section in the incorporated tariffs and to include all CTSA environs, GCSA environs and Beaumont, Texas environs in the "Territory" section in the environs tariffs; |

| 1 | 3. | add a reference to the Excess Deferred Income Taxes Rider, Rate Schedule |
|----|---------|--|
| 2 | | EDIT-Rider, under "Other Adjustments;" |
| 3 | 4. | add a reference to the Hurricane Harvey Surcharge Rider, Rate Schedule |
| 4 | | HARV-Rider, under "Other Adjustments;" |
| 5 | 5. | add a reference to the Natural Event Response Rider, Rate Schedule NER, |
| 6 | | under "Other Adjustments;" |
| 7 | 6. | add residential builders to the "Applicability" section in Rate Schedules 10 |
| 8 | | and 1Z; and |
| 9 | | Additional material differences between the proposed CGSA gas sales |
| 10 | tariffs | and the gas sales tariffs currently in effect for the City of Beaumont and the |
| 11 | GCSA | incorporated and environs areas are the: |
| 12 | 1. | addition of the Pipeline Integrity Testing Rider, Rate Schedule PIT, under |
| 13 | | "Other Adjustments; |
| 14 | 2. | addition of the Public Schools Space Heating Service, Rate Schedules 48 |
| 15 | | and 4H; |
| 16 | 3. | addition of the Compressed Natural Gas Service, Rate Schedules CNG-1 |
| 17 | | and CNG-1-ENV; |
| 18 | 4. | addition of the Electrical Cogeneration Service, Rate Schedules C-1 and |
| 19 | | C-1-ENV; |
| 20 | 5. | removal of the curtailment language in the "Conditions" section of the |
| 21 | | Industrial tariff, Rate Schedules 30 and 3Z, because these provisions are |
| 22 | | contained in the Company's curtailment plan on file with the Commission; |
| 23 | | and |

| 1 | | 6. removal of the unmetered service language in the "Conditions" section of |
|----|----|---|
| 2 | | the incorporated and environs GCSA and Beaumont Commercial and |
| 3 | | Public Authority tariffs, Rate Schedules 20, 2Z, 40 and 4Z, because these |
| 4 | | provisions are contained in the Company's proposed Unmetered Gas Light |
| 5 | | Service tariffs, Rate Schedules 70 and 7Z. |
| 6 | | The proposed gas sales rates are consistent with the recommendations of Company |
| 7 | | witness Paul H. Raab. |
| 8 | Q. | PLEASE EXPLAIN THE TARIFF REVISION TO OFFER RESIDENTIAL |
| 9 | | CUSTOMERS TWO RATE OPTIONS. |
| 10 | A. | As discussed by Mr. Raab, the Company proposes a residential rate design that |
| 11 | | includes an A Rate and a B Rate to be assigned to residential customers depending |
| 12 | | upon customer usage. The revisions to Rate Schedules 10 and 1Z reflect the rate |
| 13 | | options consistent with the Company's request. |
| 14 | Q. | PLEASE EXPLAIN THE TARIFF REVISION TO INCLUDE |
| 15 | | RESIDENTIAL BUILDERS UNDER THE RESIDENTIAL RATE |
| 16 | | SCHEDULES 10 AND 1Z RATHER THAN THE COMMERCIAL RATE |
| 17 | | SCHEDULES 20 AND 2Z. |
| 18 | A. | After gas sales service begins for a newly constructed home, while the house is for |
| 19 | | sale, the residential builder pays for the gas service. Because a residential builder |
| 20 | | is a commercial customer, they have historically paid commercial rates for this |
| 21 | | service. TGS proposes to charge residential builders a residential rate for gas |
| 22 | | service to these homes because they are single family dwelling places. This change |

| 1 | | will also add administrative efficiency because the rate will not need to be changed |
|----|----|--|
| 2 | | from commercial to residential when the home is sold. |
| 3 | | This revision is consistent with the tariffs proposed and approved in GUD |
| 4 | | No. 10739. |
| 5 | Q. | PLEASE DESCRIBE THE PROPOSED UNMETERED GAS LIGHT |
| 6 | | SERVICE TARIFFS, RATE SCHEDULES 70 AND 7Z. |
| 7 | A. | Proposed Rate Schedules 70 and 7Z provide for unmetered service to Customers |
| 8 | | using natural gas for gas lighting only. Company witness Janet L. Buchanan |
| 9 | | discusses the revenue adjustment related to this proposed tariff change. |
| 10 | Q. | PLEASE DESCRIBE THE PROPOSED C-1 AND C-1-ENV GAS SALES |
| 11 | | RATE SCHEDULES FOR ELECTRICAL COGENERATION SERVICE. |
| 12 | A. | Proposed Rate Schedules C-1 and C-1-ENV are based on the existing CTSA tariffs |
| 13 | | with revisions made to: |
| 14 | | 1. include all CTSA Cities, GCSA Cities and the City of Beaumont in the |
| 15 | | "Territory" section in the incorporated tariff, Rate Schedule C-1, and to |
| 16 | | include all CTSA environs, GCSA environs and Beaumont, Texas environs |
| 17 | | in the "Territory" section in the environs tariff, Rate Schedule C-1-ENV; |
| 18 | | 2. add a reference to the Excess Deferred Income Taxes Rider, Rate Schedule |
| 19 | | EDIT-Rider, under "Other Adjustments;" |
| 20 | | 3. add a reference to the Hurricane Harvey Surcharge Rider, Rate Schedule |
| 21 | | HARV-Rider, under "Other Adjustments;" and |
| 22 | | 4. add a reference to the Natural Event Response Rider, Rate Schedule NER, |
| 23 | | under "Other Adjustments." |
| | | |

| 1 | | Currently, there are no sales customers receiving service under the electrical |
|----|----|--|
| 2 | | cogeneration tariffs. There are, however, transportation customers receiving |
| 3 | | cogeneration service under Rate Schedule T-1. The Company proposes to retain |
| 4 | | the electrical cogeneration sales tariffs, Rate Schedules C-1 and C-1-ENV, for |
| 5 | | future customer use. |
| 6 | Q. | PLEASE DESCRIBE THE PROPOSED CNG-1 AND CNG-1-ENV GAS |
| 7 | | SALES RATE SCHEDULES FOR COMPRESSED NATURAL GAS |
| 8 | | SERVICE. |
| 9 | A. | Proposed Rate Schedules CNG-1 and CNG-1-ENV are based on the existing CTSA |
| 10 | | tariffs with revisions made to: |
| 11 | | 1. include all CTSA, GCSA Cities and the City of Beaumont in the "Territory" |
| 12 | | section in the incorporated tariff, Rate Schedule CNG-1, and to include all |
| 13 | | CTSA, GCSA, and Beaumont, Texas environs areas in the environs tariff, |
| 14 | | Rate Schedule CNG-1-ENV; |
| 15 | | 2. add a reference to the Excess Deferred Income Taxes Rider, Rate Schedule |
| 16 | | EDIT-Rider, under "Other Adjustments;" |
| 17 | | 3. add a reference to the Hurricane Harvey Surcharge Rider, Rate Schedule |
| 18 | | HARV-Rider, under "Other Adjustments;" |
| 19 | | 4. add a reference to the Natural Event Response Rider, Rate Schedule NER, |
| 20 | | under "Other Adjustments;" and |
| 21 | | 5. clarify the reference and availability of the Average Payment Plan/Average |
| 22 | | Bill Calculation Plan (ABC/APP Plan) under "Conditions." |

| 1 | Q. | PLEASE DESCRIBE THE PROPOSED CGSA TRANSPORTATION |
|----|----|--|
| 2 | | SERVICE TARIFFS. |
| 3 | A. | Proposed Rate Schedules T-1 and T-1-ENV are based on the existing CTSA |
| 4 | | transportation rate schedules, while incorporating approved changes from GUD |
| 5 | | Nos. 10656 and 10739, with revisions made to: |
| 6 | | 1. include all CTSA, GCSA Cities and the City of Beaumont in the |
| 7 | | "Availability" section in the incorporated tariff and to include all CTSA, |
| 8 | | GCSA, and Beaumont, Texas environs areas in the environs tariff; |
| 9 | | 2. add a reference to the Excess Deferred Income Taxes Rider, Rate Schedule |
| 10 | | EDIT-Rider, under "Additional Charges;" |
| 11 | | 3. add a reference to the Hurricane Harvey Surcharge Rider, Rate Schedule |
| 12 | | HARV-Rider, under "Additional Charges;" and |
| 13 | | 4. add a reference to the Natural Event Response Rider, Rate Schedule NER, |
| 14 | | under "Additional Charges." |
| 15 | | Additional material differences between the proposed CGSA transportation tariffs |
| 16 | | and the tariffs currently in effect for the City of Beaumont and the GCSA |
| 17 | | incorporated and environs areas are the addition of the: |
| 18 | | 1. Pipeline Integrity Testing Rider, Rate Schedule PIT, under "Additional |
| 19 | | Charges;" |
| 20 | | 2. Public Schools Space Heating service rate; |
| 21 | | 3. Compressed Natural Gas service rate; and |
| 22 | | 4. Electrical Cogeneration service rate. |

| 1 | Q. | DOES THE COMPANY PROPOSE ANY ADDITIONAL CHANGES TO |
|----|----|---|
| 2 | | THE TRANSPORTATION TARIFFS? |
| 3 | A. | Yes, the Company also proposes Rate Schedule T-TERMS which is consistent with |
| 4 | | the approved Rate Schedule T-TERMS in GUD Nos. 10656 and 10739 with |
| 5 | | revisions to include definitions for commercial, electrical cogeneration, and |
| 6 | | industrial service under "Definitions" to provide clarity and match the terminology |
| 7 | | in the proposed CGSA Rules of Service. |
| 8 | Q. | PLEASE DESCRIBE THE COMPANY'S PROPOSED CGSA COST OF |
| 9 | | GAS CLAUSE TARIFFS. |
| 10 | A. | Proposed Rate Schedules 1-INC and 1-ENV are based on the existing cost of gas |
| 11 | | clauses in the CTSA with revisions to: |
| 12 | | 1. include all CTSA, GCSA Cities and the City of Beaumont in the |
| 13 | | "Applicability" section in the incorporated tariff and to include all CTSA, |
| 14 | | GCSA, and Beaumont, Texas environs areas in the environs tariff; |
| 15 | | 2. add clarifying language to section B.7 regarding lost and unaccounted for |
| 16 | | gas to match section B.5; and |
| 17 | | 3. add clarifying language to section B.8 in the incorporated tariff and revise |
| 18 | | section B.3 in the environs tariff to make consistent with recently approved |
| 19 | | cost of gas clauses in GUD Nos. 10656, 10739, and 10766. |
| 20 | | The proposed cost of gas clauses require the following additional revisions |
| 21 | | compared to those currently in effect for the City of Beaumont and the incorporated |
| 22 | | and environs customers in the GCSA: |

| 1 | | 1. revise sections B.3, B.5, B.7, and H.4 in the incorporated cost of gas clause |
|----|----|---|
| 2 | | to include the use of financial instruments; and |
| 3 | | 2. revise sections B, D, E, G, and H to make the language consistent with the |
| 4 | | cost of gas clauses in the existing CTSA. |
| 5 | | In addition to the revisions above, the proposed cost of gas clauses include a number |
| 6 | | of non-substantive language revisions to make the language of the tariffs consistent |
| 7 | | with the cost of gas clauses that are in effect in the Company's other service areas. |
| 8 | Q. | PLEASE DESCRIBE THE COMPANY'S PROPOSED RULES OF |
| 9 | | SERVICE FOR THE CGSA. |
| 10 | A. | The Company developed proposed Rules of Service for the CGSA based on the |
| 11 | | existing CTSA incorporated and environs Rules of Service, which were updated |
| 12 | | and approved in 2016. The proposed changes provide clarity regarding the |
| 13 | | Company's current policies and procedures. Creating consistent Rules of Service |
| 14 | | will lead to more consistent application and more efficient administration of the |
| 15 | | Company's tariffs, which benefits all the Company's customers. The proposed |
| 16 | | Rules of Service have also been revised to reflect revisions approved in GUD Nos. |
| 17 | | 10656, 10739, and 10766. Material differences between the proposed CGSA Rules |
| 18 | | of Service and existing CTSA, GCSA and City of Beaumont Rules of Service |
| 19 | | include: |
| 20 | | 1. Including the incorporated and environs areas of the CTSA, GCSA and |
| 21 | | Beaumont in § 1 Tariff Applicability; |
| 22 | | 2. Updating § 1.3, Definitions, to include all definitions of terminology in the |
| 23 | | Rules of Service consistent with approved Rules of Service in GUD Nos. |

| 1 | | 10739 and 10766, as well as add a definition for "electrical cogeneration |
|----|-----|---|
| 2 | | service," while removing definition for "power generation service" to |
| 3 | | establish consistency with terminology used across all proposed CGSA |
| 4 | | tariffs; |
| 5 | 3. | Revisions to § 4.5 to better reflect the current course of action customers |
| 6 | | can take to obtain copies of their tariffs and rate schedules; |
| 7 | 4. | Revisions to § 4.6 to clarify how and when the Company provides general |
| 8 | | information to new customers; |
| 9 | 5. | Revisions to § 7.1 to make advance contribution in aid of construction from |
| 10 | | an applicant of new service discretionary; |
| 11 | 6. | Revision to § 7.4 and § 15.8 to clarify that there is no charge to the customer |
| 12 | | when Company personnel inspect or perform tests on new installations or |
| 13 | | appliances prior to initiation of service; |
| 14 | 7. | Addition of § 10.6 which specifies that when a franchise agreement may be |
| 15 | | in conflict with the terms and conditions of Section § 10, Security Deposits, |
| 16 | | the franchise agreement terms apply; |
| 17 | 8. | Revisions to the table in § 11.1 to include the City of Beaumont and the |
| 18 | | Gulf Coast Cities' atmospheric and standard serving pressures; |
| 19 | 9. | Revision to § 12.2 to establish consistency across the Rules of Service |
| 20 | | regarding a customer's obligations to grant premise and meter access to |
| 21 | | Company personnel; |
| 22 | 10. | Revisions to § 13.7 to clarify payment options administered by contracted |
| 23 | | vendors; |

| 1 | | 11. Addition of § 13.8, Deferred Payment Plans, to provide terms and |
|----|----|---|
| 2 | | conditions of deferred payment plans that may be offered by the Company |
| 3 | | to customers consistent with Commission Rule § 7.45(2)(D); |
| 4 | | 12. Addition of § 17.3 which relates to the suspension of gas utility service |
| 5 | | disconnection during an extreme weather emergency consistent with |
| 6 | | Commission Rule § 7.46, and the Company proposes to withdraw the |
| 7 | | existing CTSA, GCSA and Beaumont environs Rules of Service addendum; |
| 8 | | 13. Revisions to § 20 to update the language to better reflect current plan |
| 9 | | descriptions; and |
| 10 | | 14. Revisions to § 21, Fees and Deposits, to establish greater consistency for |
| 11 | | service fees and deposits among the Company's service areas. |
| 12 | | The Company proposes to withdraw the existing CTSA, GCSA, and Beaumont |
| 13 | | environs Rules of Service addendum waiving the deposit requirement for victims |
| 14 | | of family violence because the provision is now included in § 5.5 of the proposed |
| 15 | | Rules of Service. |
| 16 | Q. | WHAT REVISIONS HAS THE COMPANY MADE TO ITS SERVICE FEES |
| 17 | | AND DEPOSITS AS REFLECTED IN SECTION 21 OF THE PROPOSED |
| 18 | | RULES OF SERVICE? |
| 19 | A. | Exhibit CMB-4 identifies the current and proposed service fees. The proposed |
| 20 | | service fees are similar to those approved for the Company's other service areas in |
| 21 | | GUD Nos. 10488, 10506, 10526, 10656, 10739 and 10766. As with all service |
| 22 | | charges, only customers requesting and receiving a particular service will be |
| | | |

| 1 | | charged for that service. This addition to revenue has been reflected as a known |
|----|----|---|
| 2 | | and measurable change on Schedule G-3, which Ms. Buchanan sponsors. |
| 3 | Q. | HOW HAS THE COMPANY REVISED THE WEATHER |
| 4 | | NORMALIZATION CLAUSE FOR THE PROPOSED CGSA? |
| 5 | A. | Existing Rate Schedule WNA provides a mechanism whereby incorporated and |
| 6 | | environs customer bills are adjusted up or down each billing cycle to reflect |
| 7 | | differences in actual weather compared to normal weather, as defined in the rate |
| 8 | | case and discussed in the testimony of Ms. Buchanan. Revisions have been made |
| 9 | | to Rate Schedule WNA to: |
| 10 | | 1. add the incorporated and environs GCSA and Beaumont customers to the |
| 11 | | applicability section; and |
| 12 | | 2. reflect updated weather factors for each class consistent with Ms. Buchanan's |
| 13 | | weather normalization calculation in this case. |
| 14 | Q. | PLEASE DESCRIBE RATE SCHEDULE EDIT-RIDER FOR THE FLOW |
| 15 | | BACK OF EXCESS DEFERRED FEDERAL INCOME TAXES. |
| 16 | A. | Proposed Rate Schedule EDIT-Rider provides a mechanism for the flow back to |
| 17 | | customers of the annual amortization of EDIT, via an annual one-time bill credit, |
| 18 | | as described in the testimony of Company witness Stacey L. McTaggart. Rate |
| 19 | | Schedule EDIT-Rider would be in effect until the Company has completed the flow |
| 20 | | back of the EDIT balance to customers. |

| 1 | Q. | PLEASE DESCRIBE RATE SCHEDULES PIT AND PIT-RIDER FOR THE |
|----|----|--|
| 2 | | RECOVERY OF PIPELINE INTEGRITY TESTING EXPENSES. |
| 3 | A. | Proposed Rate Schedules PIT and PIT-Rider provide a mechanism for recovery of |
| 4 | | costs incurred to comply with the Commission's Pipeline Integrity Assessment and |
| 5 | | Management Plan Rule, Rule § 8.101, and other future Commission rules related |
| 6 | | to integrity management plans, through a surcharge similar to the PIT-Rider |
| 7 | | previously approved by the Commission in GUD Nos. 9988, 10506, 10526, 10656, |
| 8 | | and 10739, as described in the testimony of Ms. McTaggart. Additionally, Rate |
| 9 | | Schedule PIT requires initial regulatory approval of the form of notice. |
| 10 | | Accordingly, in this case, the Company seeks formal approval of the form of notice |
| 11 | | included in Exhibit CMB-5. |
| 12 | Q. | PLEASE DESCRIBE THE PROPOSED HARV-RIDER TARIFF. |
| 13 | A. | Proposed Rate Schedule HARV-Rider provides a mechanism for the recovery of |
| 14 | | losses incurred by the Company as a direct result of Hurricane Harvey and not |
| 15 | | recoverable from any other source, as described in the testimony of Ms. McTaggart. |
| 16 | Q. | PLEASE DESCRIBE THE PROPOSED RATE SCHEDULES NATURAL |
| 17 | | EVENT RESPONSE (NER) AND NER-RIDER. |
| 18 | A. | Proposed Rate Schedule NER and NER-Rider was modeled after the structure of |
| 19 | | the PIT tariff previously approved by the Commission in GUD Nos. 9988, 10506, |
| 20 | | 10526, 10656, and 10739. It provides a mechanism for the deferral and recovery |
| 21 | | request of the Company's costs associated with the operation and maintenance |
| 22 | | expenses resulting from natural events, as described in the testimony of |
| 23 | | Ms. McTaggart. |

| 1 | Q. | WHAT RATE CASE EXPENSE RECOVERY TARIFFS IS THE |
|----|----|---|
| 2 | | COMPANY REQUESTING? |
| 3 | A. | The Company is requesting approval of rate case expense riders, Rate Schedules |
| 4 | | RCE and RCE-ENV, to enable the Company to recover all rate case expenses |
| 5 | | determined to be reasonable, as described in the testimony of Ms. McTaggart. |
| 6 | Q. | ARE THERE ANY ADDITIONAL COMPANY TARIFFS YOU WISH TO |
| 7 | | ADDRESS? |
| 8 | A. | Yes. The Company proposes no change to Rate Schedule PSF, "Pipeline Safety |
| 9 | | and Regulatory Fees," which describes the recovery of the annual fee to support the |
| 10 | | pipeline safety functions of the Commission. In addition, the Company proposes |
| 11 | | to withdraw Rate Schedule COSA, "Cost of Service Adjustment Clause," for the |
| 12 | | GCSA. |

- 13 Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?
- 14 A. Yes, it does.

Exhibit CMB-5 CGSA PIT Rider Form of Notice Page 1 of 1

PUBLIC NOTICE _____ CGSA Pipeline Integrity Testing Rider

Texas Gas Service Company, a division of ONE Gas, Inc., (the "Company" or "TGS") hereby gives notice of rates to be charged from April ____ through March ____ under the Pipeline Integrity Testing ("PIT") Rider applicable to the Central-Gulf Service Area incorporated and environs areas of Austin, Bayou Vista, Beaumont, Bee Cave, Cedar Park, Cuero, Dripping Springs, Galveston, Gonzales, Groves, Jamaica Beach, Kyle, Lakeway, Lockhart, Luling, Nederland, Nixon, Port Arthur, Port Neches, Rollingwood, Shiner, Sunset Valley, West Lake Hills, and Yoakum, Texas and the environs of Buda, Texas. The PIT Rider permits the Company to recover the cost of pipeline safety testing that the Company is required to perform by law.

The effect of the PIT Rider on the various customer classes within the CGSA is set forth in the table below:

| Rate Schedule | PIT Rate per Ccf | Average Monthly Bill Impact | Number of Customers |
|------------------------------|------------------|-----------------------------------|------------------------|
| Residential | | | |
| Commercial | | | |
| Public Authority | | | |
| Industrial | | | |
| Public Schools Space Heating | | | |
| Compressed Natural Gas | | | |
| Electrical Cogeneration | | | |
| Standard Transportation | | | |

Persons with questions or who want more information about this filing may contact the Company at 1-800-700-2443. A copy of the filing will be available for inspection during normal business hours at one of the Company's offices at 5613 Avenue F in Austin, Texas, 4201 39th Street in Port Arthur, Texas, or 402 33rd Street in Galveston, Texas, or on the Company's website at https://www.texasgasservice.com/newsletters-and-notices/rate-notices.

AFFIDAVIT OF CHRISTY BELL

BEFORE ME, the undersigned authority, on this day personally appeared Christy Bell who having been placed under oath by me did depose as follows:

- 1. "My name is Christy Bell. I am over the age of eighteen (18) and fully competent to make this affidavit. I am employed as Rates Analyst I for Texas Gas Service Company, a division of ONE Gas, Inc. The facts stated herein are true and correct based upon my personal knowledge.
- 2. I have prepared the foregoing Direct Testimony and the information contained in this document is true and correct to the best of my knowledge."

 Further affiant sayeth not.

Christy Bell

SUBSCRIBED AND SWORN TO BEFORE ME by the said Christy Bell on this 4th

day of Desember, 2019.

MARY L PENA NOTARY PUBLIC ID# 11652311 State of Texas Comm. Exp. 05-13-2023

Notary Public in and for the State of Texas

PUBLIC NOTICE OF PROPOSED RATE CHANGE NATURAL GAS UTILITY RATES

On December 20, 2019, Texas Gas Service Company, a Division of ONE Gas, Inc. ("TGS" or "Company"), filed a Statement of Intent to Change Rates ("Statement of Intent") with the Railroad Commission of Texas and with the Cities of Austin, Bee Cave, Cedar Park, Cuero, Dripping Springs, Gonzales, Kyle, Lakeway, Lockhart, Luling, Rollingwood, Shiner, Sunset Valley, Nixon, West Lake Hills, Yoakum, Bayou Vista, Galveston, Groves, Jamaica Beach, Nederland, Port Arthur and Port Neches, Texas and the City of Beaumont for the gas utility rates charged by the Company to customers within the Central Texas Service Area ("CTSA"), the Gulf Coast Service Area ("GCSA") and the City of Beaumont. The proposed change in rates will affect all residential, commercial, commercial transportation, industrial, industrial transportation, public authority, public authority transportation, compressed natural gas, compressed natural gas transportation, electrical cogeneration transportation, public school space heating and public school space heating transportation customers within the incorporated cities and unincorporated areas of the CTSA and GCSA and the City of Beaumont. The proposed effective date of the requested rate changes is February 6, 2020.

In addition to changing rates, TGS proposes to consolidate the CTSA, the GCSA and the City of Beaumont into one new service area called the Central-Gulf Service Area ("CGSA"). Consistent with its request for consolidation, the Company has developed its proposed rates based on the system-wide cost of providing service to the proposed CGSA on a combined basis. The proposed rates and tariffs are expected to increase the Company's annual system-wide revenues within the proposed CGSA by approximately \$17 million or 9.43% including gas cost or 15.64% excluding gas cost. The proposed change in rates does constitute a "major change" as that term is defined by Section 104.101 of the Texas Utilities Code because the proposed rates will increase the total aggregate revenues of the Company in the proposed CGSA by more than two and one-half percent. The proposed change in rates will not become effective until similar changes have become effective within the nearest incorporated city.

The Company proposes to implement the rates included in Table 1 below:

TABLE 1 – Proposed Rate Changes for Incorporated and Unincorporated/Environs Customers

| | Incorporate | | | | | |
|--|-------------------------------|---------------------------|-------------------------------|---------------------------|------------------------------|--|

^a CFH: Cubic Feet per Hour.

The proposed increases in Table 3 reflect a net increase of \$277,029 in revenues.

In addition to requesting new rates and consolidation of service areas, TGS is requesting: (1) Commission approval of new depreciation rates for Direct and Division distribution and general plant; (2) a prudence determination for capital investment made in the proposed CGSA through December 31, 2019; (3) a finding from the Commission that ONE Gas' acquisition of ONEOK Transmission Company ("OTC") and its assets is consistent with the public interest under Texas Utilities Code § 102.051; (4) a finding from the Commission that the approvals of the administrative orders by the Gas Services Department of the Commission based on the Accounting Order in GUD No. 10695 are reasonable and accurate; (5) approval of the form of notice pursuant to the proposed Rate Schedule PIT; and (6) approval to recover the reasonable rate case expenses associated with this filing through a surcharge on rates, as provided by law.

In addition, TGS proposes to withdraw the existing CTSA, GCSA and City of Beaumont tariffs for which TGS is requesting changes. This includes withdrawal of the existing Rules of Service for the CTSA, GCSA and City of Beaumont, and TGS requests approval of Rules of Service applicable to all rate classes within the proposed CGSA. For the requested Rules of Service, TGS proposes (1) including the incorporated and environs areas of the CTSA, GCSA and Beaumont in § 1, Tariff Applicability; (2) Updating § 1.3, Definitions, to include all definitions of terminology in the Rules of Service consistent with approved Rules of Service in GUD Nos. 10739 and 10766, as well as add a definition for "electrical cogeneration service," while removing the definition for "power generation service" to establish consistency with terminology used across all proposed CGSA tariffs; (3) Revisions to § 4.5 to better reflect the current course of action customers can take to obtain copies of tariffs and rate schedules; (4) revisions to § 4.6 to clarify how and when the Company provides general information to new customers; (5) revisions to § 7.1 to make advance contribution in aid of construction from an applicant of new service discretionary; (6) revisions to § 7.4 and § 15.8 to clarify that there is no charge to the customer when Company personnel inspect or perform tests on new installations or appliances prior to initiation of service; (7) addition of § 10.6, which specifies that when a franchise agreement may be in conflict with the terms and conditions of Section § 10, Security Deposits, the franchise agreement terms apply; (8) revisions to the table in § 11.1 to include the City of Beaumont and the Gulf Coast Cities' atmospheric and standard serving pressures; (9) revisions to § 12.2 to establish consistency across the Rules of Service regarding a customer's obligations to grant premise and meter access to Company personnel; (10) revisions to § 13.7 to clarify payment options administered by contracted vendors; (11) addition of § 13.8, Deferred Payment Plans, to provide terms and conditions of deferred payment plans that may be offered by the Company to customers consistent with Commission Rule § 7.45(2)(D); (12) addition of § 17.3, which relates to the suspension of gas utility service disconnection during an extreme weather emergency consistent with Commission Rule § 7.46, and the Company

^b ERT: Electronic Radio Transponder. The Company only exchanges meters with ERT.

proposes to withdraw the existing CTSA and GCSA Rules of Service addendum; (13) revisions to § 20 to update the language to better reflect current plan descriptions; and (14) revisions to § 21, Fees and Deposits, to establish greater consistency for service fees and deposits among the Company's service areas.

In addition, TGS requests approval of rate schedules and tariffs applicable to all rate classes within the proposed CGSA that contain the rates reflected in Table 1. TGS also proposes the following new rate schedules for the proposed CGSA: (1) Rate Schedule EDIT-Rider for the flow back to customers of the annual amortization of Excess Deferred Income Taxes, via a one-time bill credit; (2) Rate Schedules PIT and PIT-Rider to recover pipeline integrity testing costs; (3) Rate Schedule HARV-Rider for the recovery of reasonable and necessary expenses TGS incurred to restore service as a direct result of Hurricane Harvey: (4) Rate Schedules NER and NER-Rider to recover future extraordinary operations and maintenance expenses resulting from natural events; and (5) Rate Schedules 70 and 7Z to provide unmetered service to customers using natural gas for gas lighting only. For the proposed CGSA gas sales rate schedules, TGS proposes changes to base rate schedules 10, 20, 30, 40, 48, 1Z, 2Z, 3Z, 4Z and 4H to: (1) to add references to Rate Schedule EDIT-Rider, Rate Schedule HARV-Rider, and Rate Schedule NER-Rider, under "Other Adjustments; (2) add a new residential A/B rate design to Rate Schedules 10 and 1Z that will provide options for customers based on their usage patterns and add residential builders to the "Applicability" sections. Additional material differences between the proposed CGSA gas sales tariffs and the gas sales tariffs currently in effect for the City of Beaumont and the GCSA incorporated and environs areas are the: (1) addition of the Pipeline Integrity Testing Rider, Rate Schedule PIT, under "Other Adjustments: (2) addition of the Public Schools Space Heating Service, Rate Schedules 48 and 4H; (3) addition of the Compressed Natural Gas Service, Rate Schedules CNG-1 and CNG-1-ENV; (4) addition of the Electrical Cogeneration Service, Rate Schedules C-1 and C-1-ENV; (5) removal of the curtailment language in the "Conditions" section of the Industrial tariff, Rate Schedules 30 and 3Z because these provisions are contained in the Company's curtailment plan on file with the Commission; and (6) removal of the unmetered service language in the "Conditions" section of the incorporated and environs GCSA and Beaumont Commercial and Public Authority tariffs, Rate Schedules 20, 2Z, 40 and 4Z, because these provisions are contained in the Company's proposed Unmetered Gas Light Service tariffs, Rate Schedules 70 and 7Z. For the proposed CGSA Transportation service rate schedules, TGS proposes changes to Rate Schedules T-1 and T-1-ENV to: (1) include all CTSA, GCSA Cities and the City of Beaumont in the "Availability" section in the incorporated tariff and to include all CTSA, GCSA, and Beaumont, Texas environs areas in the environs tariff; (2) add a reference to the Rate Schedule EDIT-Rider, Rate Schedule HARV-Rider, and Rate Schedule NER under "Additional Charges;" Additional material differences between the proposed CGSA transportation tariffs and the tariffs currently in effect for the City of Beaumont and the GCSA incorporated and environs areas are the addition of the: (1) Pipeline Integrity Testing Rider, Rate Schedule PIT, under "Additional Charges;" (2) Public Schools Space Heating service rate; (3) Compressed Natural Gas service rate; and (4) Electrical Cogeneration service rate. TGS also proposes Rate Schedule T-TERMS to provide clarity and match the terminology in the proposed CGSA Rules of Service. For the proposed CGSA Cost of Gas Clause tariffs, TGS proposes changes to Rate Schedules 1-INC and 1-ENV to: (1) include all CTSA Cities, GCSA Cities and the City of Beaumont in the "Applicability" section in the incorporated tariff and to include all CTSA, GCSA, and Beaumont, Texas environs areas in the environs tariff; (2) add clarifying language to section B.7 regarding lost and unaccounted for gas to match section B.5; and (3) add clarifying language to section B.8 in the incorporated tariff and revise section B.3 in the environs tariff to make consistent with recently approved cost of gas clauses. The proposed CGSA Cost of Gas Clause tariff also contains: (1) revisions to sections B.3, B.5, B.7, and H.4 in the incorporated cost of gas clause to include the use of financial instruments; and (2) revise sections B, D, E, G, and H to make the language consistent with the cost of gas clauses in the existing CTSA. Existing Rate Schedule WNA provides a mechanism whereby customer bills are adjusted up or down each billing cycle to reflect differences in actual weather compared to normal weather, as defined in the rate case. Revisions have been made to Rate Schedule WNA to: (1) add the incorporated and environs GCSA and Beaumont customers to the "Applicability" section; and (2) reflect updated weather factors for each class consistent with the weather normalization calculation in TGS's rate filing. TGS also proposes to withdraw Rate Schedule COSA, "Cost of Service Adjustment Clause," for the GCSA. TGS also requests approval of Rate Schedules RCE and RCE-ENV for recovery of approved rate case expenses related to the TGS's Statement of Intent.

Persons with specific questions or desiring additional information about this filing may contact TGS at 1-800-700-2443. Complete copies of the filed Statement of Intent, including all proposed rates and schedule changes, are available for inspection at TGS's offices located at 5613 Avenue F, Austin, Texas 78751, 402 33rd St., Galveston, Texas 77550 or 4201 39th Street, Port Arthur, Texas 77642, or on the Company's website at https://www.texasgasservice.com/CustomerNotices-Rate Notices. Any affected person may file written comments or a protest concerning the proposed rate change with the Docket Services Section of the Office of the Hearings Division, Railroad Commission of Texas, P.O. Box 12967, Austin, Texas 78711-2967, at any time within 30 days following the date on which this change would or has become effective, or March 7, 2020. Please reference GUD No. _______. Any affected person within an incorporated area may contact his or her city council.

Este aviso tiene como fin informarle a los clientes de Texas Gas Service, una Division de ONE Gas, Inc., ("TGS" o la "Compañía") de el área del Norte de Texas que la Compañía ha presentado una solicitud para aumentar las tarifas del servicio público de gas. Esta solicitud afecta a todos los clientes residenciales, comerciales, industriales y de autoridad pública. Las personas que deseen hacer preguntas específicas o recibir más información sobre esta solicitud pueden comunicarse con la Compañía llamando al 1-800-700un mensaie de correo electrónico ODCInformationCenterWebTeam@onegas.com. Cualquier persona afectada puede presentar por escrito comentarios o una protesta sobre el cambio de tarifas propuesto a la Sección de Servicios de la Oficina de la División de Audiencias, Comisión Ferroviaria de Texas, P.O. Box 12967, Austin, Texas 78711-2967, en cualquier momento dentro de los 30 días siguientes a la fecha en que este cambio entraría en vigencia o ___. Cualquier persona afectada el 7 de marzo del 2020. Por favor, haga referencia a GUD No. dentro de un área incorporada puede contactar a su Consejo Municipal.

TEXAS GAS SERVICE COMPANY, A DIVISION OF ONE GAS, INC., STATEMENT OF INTENT TO CHANGE GAS UTILITY RATES WITHIN THE INCORPORATED AREAS OF THE CENTRAL TEXAS SERVICE AREA, THE GULF COAST SERVICE AREA AND THE CITY OF BEAUMONT PROTECTIVE AGREEMENT

This Protective Agreement shall govern the use of all information deemed confidential or highly sensitive confidential information by a party providing information to the Cities or responding to discovery requests, including information whose confidentiality may be under dispute in this matter.

1. Designation of Protected Materials

Any party or person producing or filing a document, including, but not limited to, records stored or encoded on a computer disk or other similar electronic storage medium, in this proceeding may designate that document, or any portion of it, as confidential by typing or stamping on its face "PROTECTED MATERIALS **PROVIDED PURSUANT** TO **PROTECTIVE** AGREEMENT" (hereinafter referred to as "protected materials"). The documents shall be consecutively Bates Stamped when necessary. On or before the date the protected materials or highly sensitive materials (as this term is defined in Paragraph 6 herein) are provided to the Commission or parties, the producing party shall file and deliver to each party to the proceeding a written statement, which may be in the form of an objection, indicating: (1) any and all exemptions to the Public Information Act, TEX. GOV'T CODE ANN. Chapter 552, claimed to be applicable to the alleged protected materials; (2) the reasons supporting the providing party's claim that the responsive information is exempt from the public disclosure under the Public Information Act and subject to treatment as protected materials; and (3) that counsel for the providing party has reviewed the information sufficiently to state in good faith that the information is exempt from public disclosure under the Public Information Act and merits protected materials designation.

2. Materials Excluded from Protected Materials Designation

Protected materials shall not include any information or document contained in the public files of the Railroad Commission of Texas, or any other federal or state agency, court, or local government authority subject to the Public Information Act or under the Federal Freedom of Information Act provided however, that any party or person may assert any privilege or exception available under these Acts. Protected materials also shall not include materials that at the time of or prior to disclosure in these proceedings, is or was publicly disclosed, on a non-confidential basis. The disclosure of materials to a party, its customers, or their respective employees, agents, consultants, or counsel in the normal course of business shall not preclude a claim that such materials are protected materials hereunder. Protected materials disclosed by someone other than an employee, agent, or consultant of the originating party in violation of this Protective Agreement shall not lose their status as protected material as a result of such disclosure.

3. Definition of "reviewing party"

A "reviewing party" is defined for purposes of this Protective Agreement as a party to the city-level Statement of Intent proceeding filed by Texas Gas Service Company, a division of ONE

Gas, Inc. ("TGS"), including TGS or a representative for a city within the Central Texas Service Area, the Gulf Coast Service Area and the City of Beaumont, or other party with standing to participate in the proceeding.

4. Definition of "producing party"

A "producing party" is defined for purposes of this Protective Agreement as TGS, a city within the Central Texas Service Area, the Gulf Coast Service Area and the City of Beaumont, or any other party with standing to participate in the proceeding.

5. Access to Protected Materials

A reviewing party shall be permitted access to protected materials only through its authorized representatives. "Authorized representatives" of a party include its counsel of record in this proceeding and associated attorneys, paralegals, economists, statisticians, accountants, consultants, or other persons employed or retained by the party and directly engaged in these proceedings, provided that such person has signed the certification required by Paragraph 8.

6. Designation of Highly Sensitive Protected Materials

The term "highly sensitive protected materials" is a subset of "protected materials." The term refers to, but is not limited to, documents and information the provision of which to the reviewing party or its authorized representatives would: (1) expose the producing party or any of its affiliates to an unreasonable risk of harm, or (2) would result in disclosure of information that would be subject to a privilege against disclosure, a contractual confidentiality agreement or other Protective Agreement or agreement. Highly sensitive protected materials further include, but are not limited to, business operations or financial information that is commercially sensitive. Documents so classified by a producing party shall bear the designation "HIGHLY SENSITIVE MATERIALS PROVIDED PROTECTED **PURSUANT** TO THE **PROTECTIVE** AGREEMENT."

7. Restrictions on Copies and Inspection of Highly Sensitive Protected Materials

Highly sensitive protected materials shall be made available for inspection only at the address specified pursuant to Paragraph 9. Additionally, only one copy of highly sensitive protected materials shall be provided to counsel of any party to this proceeding upon written request following completion of the certifications required by Paragraph 8 herein. A party may make one additional copy of reproduced highly sensitive protected materials for use in this proceeding pursuant to this Protective Agreement. No additional copies of such highly sensitive protected materials may be made, except that additional copies may be made in order to have sufficient copies for introduction of the material into the evidentiary record if the material is to be offered for admission into the record. A record of any copies that are made of highly sensitive protected material shall be kept and a copy of the record shall be sent to the producing party upon request. The record shall include information on the location and the person in possession of the copy. The authorized representatives for the purpose of access to highly sensitive protected materials must be persons who are: (1) counsel for the reviewing party, (2) consultants for the reviewing party working under the direction of the reviewing party's counsel, (3) permanent non-

elected employees of municipalities that are parties in this proceeding, who have primary responsibility for utility regulation. The authorized representatives for the Cities for the purpose of access to these materials shall consist of its respective counsel of record in this proceeding and associated attorneys, paralegals, economists, statisticians, accountants, consultants, or other persons employed or retained by those agencies and directly engaged in this proceeding. Limited notes may be made of highly sensitive protected materials, and such notes shall themselves be treated as highly sensitive protected material unless such notes are restricted to a description of the document and a general characterization of its subject matter in a manner that does not include any substantive information contained in such highly sensitive protected materials.

8. Required Certification

Each person who inspects the protected materials shall, before such inspection, agree in writing to follow certification set forth in Exhibit A to this Agreement:

I certify my understanding that the protected materials are provided to me pursuant to the terms and restrictions of the Protective Agreement in this proceeding, and that I have been given a copy of it and have read the Protective Agreement and agree to be bound by it. I understand that the contents of the protected materials, any notes, memoranda, or any other form of information regarding or derived from the protected materials shall not be disclosed to anyone other than in accordance with the Protective Agreement and shall be used only for the purpose of this proceeding. If the information contained in the protected materials is obtained from independent sources that did not obtain such information from documents obtained in this proceeding, the understanding stated herein shall not apply.

In addition, reviewing parties who are permitted access to highly sensitive protected material under the terms of this ruling shall, before inspection of such materials, agree in writing to the following certification set forth in Exhibit A to this Protective Agreement:

I certify that I am eligible to have access to highly sensitive protected materials under the terms of the Protective Agreement in this proceeding.

A copy of each signed certification shall be provided to counsel for the party asserting confidentiality. Except for highly sensitive protected materials, any authorized representative may disclose protected materials to any other person who is an authorized representative, provided that, if the person to whom disclosure is to be made has not executed and provided for delivery of a signed certification to the party asserting confidentiality, that certification shall be executed prior to any disclosure. An authorized representative may disclose highly sensitive protected material to other reviewing representatives who are permitted access to such materials and have executed the additional certification required for persons who receive access to highly sensitive protected material. In the event that any authorized representative to whom protected materials are disclosed ceases to be engaged in these proceedings, access to protected materials by that person shall be terminated and all notes or memoranda or other information derived from the protected material shall be returned to the party on whose behalf that person was acting. Any person who has agreed to either or both of the foregoing certifications shall continue to be bound by the provisions of this Protective Agreement, even if no longer engaged in these proceedings. Parties who assert confidentiality shall maintain a list of persons who sign a certification pursuant to this Paragraph.

9. Voluminous Materials

- (a) Voluminous protected materials which exceed eight linear feet shall be made available for inspections in its normal repository between the hours of 9:30 a.m. and 5:00 p.m., Monday through Friday (except holidays) in accordance with the Texas Rules of Civil Procedure. A party shall notify the other parties of the address at which the voluminous data will be produced simultaneously with the production of such data. For purposes of this Protective Agreement voluminous materials or data shall mean responses to a particular question or subpart that consist of one hundred pages or more in the aggregate.
- (b) Except for highly sensitive protected materials as provided for in Paragraph 7, and for protected materials that are voluminous, the party asserting confidentiality shall provide a party one copy of the protected materials upon receipt of the signed certifications described in Paragraph 8. Except as provided above for highly sensitive protected materials, parties may take notes regarding the information contained in protected materials made available for inspection pursuant to Paragraph 9(a). Only one copy of such protected materials shall be reproduced for each party. Parties shall make a diligent, good-faith effort to limit the amount of copying requested to only that which is appropriate for purposes of this proceeding. Notwithstanding the foregoing provisions of this Paragraph 9(b), a party may make further copies of reproduced protected materials for use in this proceeding pursuant to this Protective Agreement, but a record shall be maintained as to the documents produced and the number of copies made, and upon request, the party shall provide the party asserting confidentiality with a copy of that record.

10. Availability for Purposes of this Filing

All protected materials shall be made available to the Cities solely for the purposes of this proceeding. Protected materials, as well as a party's notes, memoranda, or other information regarding, or derived from the protected materials are to be treated confidentially by the parties and shall not be disclosed or used by the party except as permitted and provided in this Protective Agreement. Information derived from or describing the protected materials shall be maintained in a secure place and shall not be placed in the public or general files of the party except in accordance with the provisions of this Protective Agreement. Cities must take all reasonable precautions to ensure that the protected materials, including notes and analysis made from protected materials, are not viewed or taken by any person other than an authorized representative of the Cities.

11. Changes to Protective Agreement

Nothing herein restricts the party seeking protected material and the party producing the protected material from agreeing to other procedures/methods for handling of protected material, including highly sensitive protected material. In addition, each party shall have the right to seek changes in this Protective Agreement as appropriate from the Examiners, the Commission, or the courts. Nothing herein shall prevent any party from opposing efforts to seek changes to this ruling.

12. Objection to Protected Materials

Nothing in this ruling shall be construed as precluding any party from objecting to the use of protected materials on grounds other than confidentiality, including the lack of required relevance. Nothing in this ruling shall be construed as an agreement by any party that the protected materials are entitled to confidential classification.

13. Acts Upon Conclusion of Proceeding

Following the conclusion of these proceedings, each party must, no later than thirty days following receipt of the notice described below, destroy or return to the party asserting confidentiality all copies of the protected materials provided by that party pursuant to this Protective Agreement and all copies reproduced by a reviewing party, and counsel for each party must provide to the party asserting confidentiality a verified certification that, to the best of his or her knowledge, information, and belief, all copies of notes, memorandum, and other documents regarding or derived from the protected materials (including copies of protected materials) that have not been so returned, if any, have been destroyed, other than notes, memoranda, or other documents which contain information in a form which, if made public, would not cause disclosure of protected materials. Promptly following the conclusion of this proceeding, counsel for the party asserting confidentiality will send a written notice to all parties, reminding them of their obligations under this Paragraph. Nothing in this Paragraph shall prohibit counsel for each party from retaining two copies of any filed testimony, exhibit, brief, application for rehearing, or other pleading which refers to protected materials provided that any such protected materials retained by counsel shall remain subject to the provisions of this ruling. As used in this Paragraph, "conclusion of this proceeding" refers to the exhaustion of available appeals, or the running of the time for making of such appeals, as provided by applicable law. If, following any appeal, the Commission conducts a remand proceeding, then "the conclusion of these proceedings" is extended by the remand to the exhaustion of available appeals, or the running of the time for the making of such appeals, as provided by applicable law. If, following any appeal, the Commission conducts a remand proceeding, then the "conclusion of this proceeding" is extended by the remand to the exhaustion of available appeals of the remand or the running of time for making such appeals of the remand, as provided by applicable law.

14. Compliance with Legal Requirements

This Protective Agreement is subject to the requirements of the Public Information Act, the Open Meetings Act, and any other applicable law, provided that parties subject to those acts will give the party asserting confidentiality notice, if possible, under those acts, prior to disclosure pursuant to those acts.

15. Effect of Court Order

If required by order of a government or judicial body, the party may release to such body the confidential information required by such order, provided, however, the party agrees that prior to such disclosure, it shall promptly notify the party asserting confidentiality of the order and allow such party sufficient time to contest release of the confidential information; provided, further, the party shall use its best efforts to prevent such confidential information from being disclosed.

The term "best efforts" as used in the preceding paragraph requires that the party's attempt to ensure that disclosure is not made by its employees or authorized representatives unless such disclosure is pursuant to a final order of a governmental or judicial body or written opinion of the Attorney General which was sought in compliance with V.T.C.A., Government Code §552.301 (Public Information). The party is not required to delay compliance with a lawful order to disclose such information but is simply required to timely notify the party asserting confidentiality, or its counsel, that it has received a challenge to the confidentiality of the information and that the reviewing party will either proceed under the provisions of §552.301 of the Texas Government Code or intends to comply with the final governmental or court order.

16. Effect of Violation of Court Order

In the event of a breach of the provisions contained in Paragraph 15, the party asserting confidentiality will not have an adequate remedy in money or damages, and accordingly, shall in addition to any other available legal or equitable remedies, be entitled to an injunction against such breach. The producing party shall not be relieved of proof of any element required to establish the right to injunctive relief.

EXHIBIT A

CERTIFICATIONS

Certification for Protected Materials Only:

I certify my understanding that the protected materials are provided to me pursuant to the terms and restrictions of the Protective Agreement in this proceeding, and that I have been given a copy of it and have read the Protective Agreement and agree to be bound by it. I understand that the contents of the protected materials, any notes, memoranda, or any other form of information regarding or derived from the protected materials shall not be disclosed to anyone other than in accordance with the Protective Agreement and shall be used only for the purpose of this proceeding. If the information contained in the protected materials is obtained from independent sources that did not obtain such information from documents obtained in this proceeding, the understanding stated herein shall not apply.

TWELVE MONTHS ENDED JUNE 30, 2019
UPDATED FOR KNOWN AND MEASURABLE CHANGES THROUGH SEPTEMBER 30, 2019

INJURIES AND DAMAGES

The information contained within this report reflects the payment activities (not accidents) by:

Type of Loss / Claim (Employee Injury, Auto or General Liability Claim);

Year & Month payment activity was conducted and accumulative cost.

Claims = Number of claims with activities for the month reporting.

Payments = Number of payment activities (invoices) for the month reporting.

Type Expense

Employee Injuries

Employee Injuries

July - June Test Year

INDEMNITY - Temporary Income Benefits (TIBs) or Workers' Comp Pay from Insurer;

and Impairment Income Benefits (IIBs) financial compensation for permanent impairment rating.

MEDICAL - All medical expenses directly related to the treatment of the employee's injury.

EXPENSES - All other expenses not related to pay or medical, but are related to the claim such as mileage reimbursement, medical review fees, etc.

Auto and General Liability

PROPERTY DAMAGE - All expenses directly related to the repair of damage to other parties property.

2010

MEDICAL - All medical expenses directly related to the treatment of personal physical injuries to other parties.

EXPENSES - All other expenses not related to property damage or medical, but are directly related to the claim such as rental car fees, settlements, etc.

(1) Service charge, special contract, and other revenue are used to offset each class' cost of service. Service charge revenue is directly assigned to classes and is included in the revenue credit on line 5. Allocation of the remaining revenues to be credited is based on each class' cost of service relative to the total cost of service on line 4. The components of the total revenue credit are as follows:

| Service Charges | Ş | 2,415,023 |
|-------------------|----|-----------|
| Special Contract | \$ | 2,872,331 |
| Irrigation | \$ | 20,483 |
| Unmetered Service | \$ | 2,655 |
| | \$ | 5,310,492 |

⁽¹⁾ Revenue-to-cost ratios are the ratios of each class' non-gas revenue (including revenue credits) to the cost of service.

⁽²⁾ Non-gas revenue is the sum of as adjusted test year base revenue (i.e., revenue from recurring monthly charges resulting from as adjusted billing determinants), service charge revenue, special contract revenue, and other revenue credited to the cost of service for each class.

⁽³⁾ Total revenue is the sum of non-gas revenue (see Note 2) and as adjusted gas costs. As adjusted gas costs are calculated by multiplying the test year average cost of gas (i.e., test year gas cost revenue divided by unadjusted sales service volumes) by as adjusted sales service volumes.

⁽⁴⁾ For each class with a cost of service required revenue decrease, 20 percent of the required decrease is implemented. The benefit of implementing less than the required decreases is assigned to the residential class.

⁽⁵⁾ No revenue change assigned to a class for which the cost of service required revenue change calls for a decrease. The resulting benefit from not implementing the required deceases is assigned to the residential class.

CUSTOMER BILL IMPACTS

TEXAS GAS SERVICE COMPANY, A DIVISION OF ONE GAS, INC.
CENTRAL-GULF SERVICE AREA
TWELVE MONTHS ENDED JUNE 30, 2019
UPDATED FOR KNOWN AND MEASURABLE CHANGES THROUGH SEPTEMBER 30, 2019

CUSTOMER BILL IMPACTS

| | | Year-Round | Average Bill | | | Ave | erage January Bill | _ |
|-------------|---------|-------------|--------------|-----|---------|-------------|--------------------|-----|
| | | | Change | | Ch | nange | | |
| Description | Current | Recommended | Dollars | % | Current | Recommended | \$ | % |
| (a) | (b) | (c) | (d) | (e) | (f) | (g) | (h) | (i) |

(1) Bill impacts are shown for those schedules with customers during the test year. The test year cost of gas in each area is included in the bill calculations. Bills under current and recommended rates do not include revenue-related taxes. These taxes vary across different locations in the service area.

(2) Bills are based on the following average usage levels:

| | | CGSA |
|-----------------------------|------------|---------|
| | Year-Round | January |
| Residential - Rate Option A | 18 | 48 |
| Residential - Rate Option B | 45 | 121 |
| Commercial | 263 | 441 |
| Industrial | 2,565 | 5,228 |
| Public Authority | 442 | 1,002 |
| Public School Space Heating | 1,927 | 2,295 |
| Compressed Natural Gas | 17 | 30 |

(3) Transportation customers secure their own gas. While the Company has no way of knowing the customer's cost of gas, these bill comparisons assume that customers obtain their gas at a cost that is five percent less than the Company's gas cost. These transportation bill comparisons are only illustrations of the level of total bills and the percentage changes in those bills. Bills are based on the following average usage levels:

| | C | GSA |
|--|------------|---------|
| | Year-Round | January |
| Commercial Transportation | 4,616 | 5,730 |
| Industrial Transportation | 14,681 | 16,571 |
| Public Authority Transportation | 1,580 | 2,328 |
| Public School Space Heating Transportation | 1,225 | 2,191 |
| Compressed Natural Gas Transportation | 28,168 | 26,196 |
| | August | January |
| Cogeneration Transportation | 339,785 | 323,832 |

(4) Year-round average bill is approximated based on the average August bill assumed to occur in each of the 5 summer months and the average January bill assumed to occur in each of the 7 winter months.

RAILROAD COMMISSION OF TEXAS

PETITION OF THE DE NOVO REVIEW OF THE DENIAL OF THE STATEMENTS OF INTENT FILED BY TEXAS GAS SERVICE COMPANY BY THE CITIES OF EL PASO, ANTHONY, CLINT, HORIZON CITY, SOCORRO, AND VILLAGE OF VINTON, TEXAS.

GAS UTILITIES DOCKET NO. 9988

FINAL ORDER

Notice of Open Meeting to consider this Order was duly posted with the Secretary of State within the time period provided by law pursuant to TEX. GOV'T CODE ANN. Chapter 551, et seq. (Vernon 2004 & Supp. 2008). The Railroad Commission of Texas adopts the following findings of fact and conclusions of law and orders as follows:

FINDINGS OF FACT

- 1. Texas Gas Service Company ("TGS") is a utility as that term is defined in the Texas Utility Code, and is subject to the jurisdiction of the Railroad Commission of Texas ("Commission").
- 2. TGS owns and operates a gas distribution system that provides gas service to customers in its El Paso Service Area ("EPSA").
- 3. The EPSA includes the Cities of El Paso, Anthony, Clint, Horizon City, Socorro, and Vinton, Texas.
- 3. On May 12, 2010, TGS filed a Petition for Review with the Railroad Commission of Texas ("Commission") to appeal the rate-setting action of the City of El Paso, Texas ("El Paso" or the "City") which denied TGS' request for a rate increase within the jurisdiction of the City. This Petition for Review was docketed by the Commission as Gas Utilities Docket No. 9988. On May 24, 2010, TGS filed a Petition for Review appealing the rate-setting actions of the municipalities of Anthony, Clint, Horizon City, Socorro, and Vinton, Texas, which denied TGS' requests for rate increases within their respective municipal boundaries, and was docketed by the Commission as Gas Utilities Docket No. 9992.
- 4. The Hearings Examiner consolidated GUD Nos. 9988 and 9992 into one docket pursuant to TEX. ADMIN. CODE §1.125 (1991) on June 3, 2010.
- 5. On June 3, 2010, Staff of the Railroad Commission of Texas ("Staff") and the City of El Paso, Texas (the "City") intervened in this proceeding. On June 17, 2010, the State of Texas' agencies and institutions of higher learning, represented by the Attorney General of Texas, Consumer Protection Division ("State"), intervened in this proceeding. On June 25, 2010, ArcelorMittal Vinton, Inc., intervened in this proceeding. No other parties and or individuals files letters of protest, objections, moved to intervene, or otherwise participated in this docket before the Commission.

GUD No. 9988 Final Order Page 2 of 7

- 6. The final hearing in this matter was conducted in Austin, Texas on August 31, 2010 through September 3, 2010.
- 7. By written agreement and as stated at the hearing TGS agreed to extend the statutory deadline for Commission action on this docket until December 16, 2010.

Rate Base

- 8. TGS adjusted its cost of service model for known and measurable changes through December 31, 2010. TGS included in its filing projected plant additions through June 30, 2010, and on June 25, 2010 updated this with actual plant-in-service balances for the months of April and May.
- 9. The June 25, 2010, filing reduced the Company's requested base rate revenue increase by \$195,617 and reduced gross plant to \$216,424,630 and net plant to \$138,008,370.
- 10. TGS' June 25, 2010, filing was reasonable because it updated projected data with actual inservice amounts, and was filed before the discovery period had ended, 6 weeks before intervenor testimony was due, and 9-1/2 weeks before the hearing on the merits, and therefore gave Staff of the Commission and intervenors appropriate notice of the updated data and time to review the data before the final hearing on the merits.
- 11. TGS did not conduct a lead-lag study for the underlying municipal rate request or this appeal. TGS proposes to use a zero Cash Working Capital balance and therefore no corresponding adjustment to its Rate Base.
- 12. It is reasonable under the circumstances of this proceeding for TGS to not conduct a lead-lag study and to utilize a zero Cash Working Capital balance because a zero balance is consistent with the applicable FERC rule regarding the absence of a lead-lag study; will result in lower rate case expenses; and had TGS conducted a lead-lag study there is a higher probability that it would have shown a positive balance as opposed to a negative balance. TGS would likely be able to calculate a positive CWC balance had the Company prepared a lead-lag study for this docket. It is therefore reasonable to request a zero balance CWC in lieu of conducting a lead-lag study and incurring the associated expense.
- 13. TGS proposal to allocate ADFIT using a net-plant based factor is reasonable because allocations based on gross plant may distort the proportion of each jurisdiction's responsibility for the ADFIT balance. Net-plant recognizes these factors and is the more appropriate basis to allocate ADFIT.
- 14. It is reasonable to reduce TGS' rate base by \$203,921 because the Commission previously approved an alternative method for the Company to recoup line extension costs through monthly surcharges billed to specific low-income residences These costs are recouped over a longer period of time, on a monthly basis, with a lower rate impact. Because these costs are recovered through monthly tapping fees, they should not be included in TGS' rate base.

GUD No. 9988 Final Order Page 3 of 7

Capital Structure and Rate of Return

- 14. A capital structure of 59.24% common equity and 40.76% long-term debt is reasonable for TGS.
- 15. A cost of long-term debt for TGS of 6.21% is reasonable for TGS.
- 16. A cost of equity of 10.33% for TGS is reasonable.
- 17. A rate of return on invested capital of 8.65% is reasonable for TGS.

Expenses

- 18. TGS' proposed short-term incentive compensation expense is unreasonable because it primarily determines the amount of incentive compensation an employee is able to receive using factors that are not related to safety and uses methods related to the financial performance of its parent company, ONEOK, Inc. It is reasonable for TGS to recover 10 percent of its requested short term incentive compensation because 10 percent of the potential award is based on safety metrics.
- 19. TGS' proposed long-term incentive compensation expense is unreasonable because it primarily determines the amount of incentive compensation an employee is able to receive using factors that are not related to safety and uses methods related to the financial performance of its parent company, ONEOK, Inc.
- 20. TGS is requesting recovery of \$168,386 in expenses incurred for the Company's Supplemental Executive Retirement Plan ("SERP"). TGS' proposed SERP expense is unreasonable because it is not necessary for the provision of safe gas service to the public.
- 21. TGS is requesting recovery of \$113,091 in expenses incurred for the Company's Employee Stock Purchase Program ("ESPP"). TGS' ESPP expense is unreasonable because it is not necessary for the provision of safe gas service to the public.
- 22. TGS' alternative proposal to recover Pipeline Integrity Expenses through a separate tariff rider, coupled with regulatory review of the reasonableness and necessity of the costs incurred and passed through, is the best mechanism for recovery of these expenses and is reasonable.
- 23. TGS' proposed recovery of allocated corporate and division expenses are reasonable.
- 24. TGS' proposed use of the modified Distrigas Allocation Methodology is reasonable.
- 25. TGS proposes amortizing reserve imbalance over the remaining lives of the assets. This approach is reasonable and in accordance with rate-making principles

GUD No. 9988 Final Order Page 4 of 7

- 26. TGS' proposed injuries and damages expense is unreasonable. It is reasonable to normalize this expense over a four-year period of time and to reduce this amount by \$146,638 for establishing the Company's cost of service.
- 27. TGS requests \$217,741 of employee travel and meals expense be included in the revenue requirement. This expense is disallowed because TGS did not prove the expense to be reasonable, necessary and directly related to the provision of gas service to customers in the EPSA. TGS' supporting documentation of these expenses was inadequate for regulatory review.

Revenues

- 28. During the 10-year period from 2000-2009, the sum of the deviations based on the 10-year measure of normal is zero Heating Degree Days for the El Paso Service Area. The sum of the deviations during the 2000-2009 period based on the 30-year measure of normal is negative 1,563 Heating Degree Days for the El Paso Service Area. The 10-year period is a more appropriate measure of ongoing weather conditions than the 30-year period for normalizing gas sales revenues.
- 29. TGS' proposal to normalize gas sales revenues for weather using a 10-year period is reasonable for the El Paso Service Area.
- 30. TGS' proposal to use the test year amount, updated to December 31, 2009, of \$1,192,680 for account 4880, Service Fees is reasonable for rate-making purposes because this value is reasonably representative of expected service fee revenue in the future and when the rates set in this proceeding are likely to be in effect.

Rate Design

- 31. TGS proposed using zero intercept study, checked by a minimum distribution system study, to allocate costs of distribution mains. The proposed methodology is reasonable and the resulting classification of distribution mains investment as 63.12 percent customer-related and 36.88 percent demand-related is reasonable.
- 32. TGS proposed classifying Transmission Plant as 100 percent demand related. Classifying Transmission Plant as 100 percent demand related is reasonable for the EPSA.
- 33. TGS' proposed rate designs are not reasonable. The rates, as shown on the attached rate schedule, consisting of a monthly customer charge and volumetric charges are reasonable.
- 34. TGS requested approval of tariffs consistent with the utility's proposed rates. TGS' proposed tariffs are not reasonable because they reflect rates inconsistent with the rates determined to be just and reasonable under this order. The attached tariffs reflect the rates approved herein and are reasonable.

GUD No. 9988

Final Order

Page 5 of 7

CONCLUSIONS OF LAW

- 1. Texas Gas Service Company (TGS) is a "Gas Utility" as defined in TEX. UTIL. CODE ANN. §101.003(7) and §121.001 (Vernon 2007 & Supp. 2010) and is therefore subject to the jurisdiction of the Railroad Commission (Commission) of Texas.
- 2. The Commission has jurisdiction over TGS and TGS' petition for *de novo* review under TEX. UTIL. CODE ANN. §§ 102.001, 103.051, 103.054, 103.055, 104.001 and 104.201 (Vernon 2007 & Supp. 2008).
- 3. The Appeals were processed in accordance with the requirements of the Gas Utility regulatory Act (GURA), and the Administrative Procedure Act, Tex. Gov't CODE ANN. §§2001.001-2001.902 (Vernon 2000 and Supp. 2004) (APA).
- 4. In accordance with the stated purpose of the Texas Utilities Code, Subtitle A, expressed under TEX. UTIL. CODE ANN. §101.002 (Vernon 1998), the Commission has assured that the rates, operations, and services established in this docket are just and reasonable to customers and to the utilities.
- 5. In accordance with 16 Tex. ADMIN. CODE ANN.§7.235 (2002), adequate notice was properly provided.
- 6. In accordance with the provisions of Tex. UTIL. CODE ANN. §103.051 and §103.054 (Vernon 2007 & Supp. 2010) TGS timely appealed the actions of the Cities Cities of El Paso, Anthony, Clint, Horizon City, Socorro, and Vinton, Texas, by filing petitions for review with Railroad Commission of Texas.
- 7. TGS failed to meet its burden of proof in accordance with the provisions of Tex, UTIL, CODE ANN, §104.008 (Vernon 2007 & Supp. 2010) on the elements of its requested rate increase identified in this order.
- 8. The revenue, rates, rate design, tariffs, and service charges proposed by TGS are found to be not just and reasonable, unreasonably preferential, prejudicial, or discriminatory, and are not sufficient, equitable, and consistent in application to each class of consumer, as required by TEX. UTIL. CODE ANN. §104.003 (Vernon 2007 & Supp. 2010).
- 9. The revenue, rates, rate design, tariffs, and service charges proposed by TGS, as amended by the Commission and identified in the schedules attached to this order, are just and reasonable, are not unreasonably preferential, prejudicial, or discriminatory, and are sufficient, equitable, and consistent in application to each class of consumer, as required by TEX. UTIL. CODE ANN. §104.003 (Vernon 2007 & Supp. 2010).
- 10. The overall revenues as established by the findings of fact and attached schedules and tariffs are reasonable; fix an overall level of revenues for TGS that will permit the company a reasonable opportunity to earn a reasonable return on its invested capital used and useful in providing service to the public over and above its reasonable and necessary operating expenses, as required by TEX. UTIL. CODE ANN. § 104.051 (Vernon 2007 & Supp. 2010); and otherwise comply with Chapter 104 of the Texas Utilities Code.

GUD No. 9988 Final Order Page 6 of 7

- 11. The revenue, rates, rate design, tariffs, and service charges proposed will not yield to TGS more than a fair return on the adjusted value of the invested capital used and useful in rendering service to the public to the public, as required by TEX. UTIL. CODE ANN. § 104.052 (Vernon 2007 & Supp. 2010).
- 12. The rates established in this docket comport with the requirements of Tex. UTIL. CODE ANN. §104.053 (Vernon 2007 & Supp. 2010) and are based upon the adjusted value of invested capital used and useful, where the adjusted value is a reasonable balance between the original cost, less depreciation, and current cost, less adjustment for present age and condition.
- 13. In accordance with TEX. UTIL. CODE ANN. §104.054 (Vernon 2007 & Supp. 2010) and TEX. ADMIN. CODE §7.5252, book depreciation and amortization was calculated on a straight line basis over the useful life expectancy of TGS's property and facilities.
- 14. In this proceeding, TGS has the burden of proof under TEX. UTIL. CODE ANN. §104.008 (Vernon 2007 & Supp. 2010) to show that the proposed rate changes are just and reasonable.
- 15. Rate case expenses for GUD No. 9988 will be considered by the Commission in accordance with Tex. UTIL. CODE ANN. §104.008 (Vernon 2007 & Supp. 2010), and 16 Tex. ADMIN. CODE §7.5530 (2002), in a separate proceeding.
- 16. All expenses for lost and unaccounted for gas in excess of 5.0 percent shall be disallowed, consistent with Tex. ADMIN. CODE § 7.5519 (2002).
- 17. TGS is required by 16 Tex. ADMIN. CODE §7.315 (2002) to file electronic tariffs incorporating rates consistent with this Order within thirty days of the date of this Order.
- 18. The rate setting methodologies set forth in TEX. UTIL. CODE ANN. §104.051 et seq. were used to set the rates in this proceeding.

IT IS THEREFORE ORDERED that Texas Gas Service Company's proposed schedule of rates is hereby DENIED.

IT IS FURTHER ORDERED that the rates, rate design, tariffs and service charges established in the findings of fact and conclusions of law and in the Examiners' Recommendation shown on the attached Schedules and tariffs for Texas Gas Service Company are APPROVED.

IT IS FURTHER ORDERED that a separate gas utility docket be opened in order to determine the appropriate tariff rider for the recovery of pipeline integrity testing expenses.

IT IS FURTHER ORDERED that, in accordance with 16 Tex. ADMIN. CODE §7.315, within 30 days of the date this Order is signed, Texas Gas Service Company shall file tariffs with the Gas Services Division. The tariffs shall incorporate rates, rate design, tariffs and service charges consistent with this Order, as stated in the findings of fact and conclusions of law and shown in the Examiners' Recommendation on the attached

GUD No. 9988 Final Order Page 7 of 7

Schedules and tariffs.

IT IS FURTHER ORDERED that any proposed findings of fact and conclusions of law not specifically adopted herein are **DENIED**. IT IS ALSO ORDERED that each exception to the Examiners' Proposal for Decision not expressly granted herein is overruled and all pending motions and requests for relief not previously granted herein are hereby **DENIED**.

IT IS FURTHER ORDERED THAT this Order will not be final and appealable until 20 days after a party is notified of the Commission's order. A party is presumed to have been notified of the Commission's order three days after the date on which the notice is actually mailed. If a timely motion for rehearing is filed by any party at interest, this order shall not become final and effective until such motion is overruled, or if such motion is granted, this order shall be subject to further action by the Commission. Pursuant to Tex. Gov't Code §2001.146(e), the time allotted for Commission action on a motion for rehearing in this case prior to its being overruled by operation of law, is hereby extended until 90 days from the date the order is served on the parties.

Each exception to the examiners' proposal for decision not expressly granted herein is overruled. All requested findings of fact and conclusions of law which are not expressly adopted herein are denied. All pending motions and requests for relief not previously granted or granted herein are denied.

SIGNED this 14th day of December, 2010.

| TO CHANGE THE RATE CGS AND | § GAS UTILITIES DOCKET No. 1000 |
| RATE PT OF ATMOS PIPELINE - | § |
| TEXAS | § |

FINAL ORDER

Notice of Open Meeting to consider this Order was duly posted with the Secretary of State within the time period provided by law pursuant to Tex. Gov't Code Ann. Chap 551, et seq. (Vernon 2004 & Supp. 2010). The Railroad Commission adopts the following findings of fact and conclusions of law and orders as follows:

FINDINGS OF FACT

- 1. Atmos Pipeline Texas ("Applicant" or "Company"), a division of Atmos Energy Corporation is a gas utility as that term is defined in the Texas Utility Code.
- 2. On September 17, 2010, Atmos Pipeline Texas filed a *Statement of Intent* to change its Rate CGS and Rate PT and related riders.
- 3. The implementation of the proposed rates was suspended on October 12, 2010.
- 4. Notice of the Hearing was given to all parties entitled to notice and the hearing in this matter commenced on January 24, 2011.
- 5. Atmos Pipeline Texas is an unincorporated division of Atmos Energy Corporation and is an intrastate natural gas transmission pipeline operating solely in Texas. Atmos Pipeline Texas operates a large intrastate pipeline consisting of approximately 6,000 miles of transmission pipeline, approximately 700 city gate meters, five underground storage facilities, and forty-one (41) gas compressor stations. The geographical areas served by this pipeline division spans from the area bounded by the Oklahoma border; the Katy hub near Houston; the Carthage hub in East Texas; the Waha hub in West Texas; and the Austin/Hill Country area.
- 6. Atmos Pipeline Texas provides service to three customer classes.
 - a. Atmos Pipeline Texas provides transportation and storage service to the local distribution companies (LDC). The customers in this group are served pursuant to two tariffs: Rate CGS-Mid-Tex and Rate CGS-Other.

- b. The customers in this class are served pursuant to the Pipeline Transportation Tariff Rate PT-Pipeline Transportation. These are interruptible customers and are under cost of service rates set by the Commission because they do not have viable competitive alternatives to Atmos Pipeline Texas.
- c. Third, Atmos Pipeline-Texas provides services to certain industrial customers, electric generation customers, producers and marketer transportation customers (also referred to as through-system deliveries) that are served under negotiated rates. The third category of customers in this filing is the Other Revenue segment. The rates paid by these customers are negotiated rates and are not set in this proceeding.
- d. Atmos Pipeline Texas also provides ancillary services to producers and marketers, such as storage.
- 7. The total throughput during the test year for the regulated customers subject to the rates set in this case was distributed among the two regulated classes of customers as follows:
 - a. Rate CGS: 91.71%.
 - b. Pipeline Transportation Rate PT: 8.29%.
- 8. The Atmos Pipeline Texas system is designed to meet the peak-day demands of human needs customers.
- 9. The test year in this case was the 12-month period ending March 31, 2010.

Books and Records

10. Atmos Pipeline – Texas maintains its books and records in accordance with the requirements of the Federal Energy Regulatory Commission's (FERC) Uniform System of Accounts.

Section 102.051 Review

- 11. A gas utility must file a report with the Railroad Commission regarding the sale, acquisition, or lease of a plant or for a total consideration of more than \$1 million dollars or regarding a merger or consolidation with another gas utility operating in this state.
- 12. Atmos Energy Corporation filed a report with the Railroad Commission after the merger.
- 13. The report was docketed as GUD No. 9555, Application for Review of Merger Between Atmos Energy Corporation and TXU Gas Company, Ltd.
- 14. In GUD No. 9555, the Commission explicitly deferred consideration of the transaction under section 102.051, of the Texas Utilities Code, until this proceeding. The merger

- was previously considered in GUD No. 9670 and found to be just and reasonable and consistent with the public interest.
- 15. In reviewing the public interest consideration the Commission considered the following factors: (1) The reasonable value of property, facilities, or securities; (2) investments made to enhance or improve reliability; (3) actions implemented to enhance or improve safety; (4) efforts to enhance or improve customer service quality; (5) measures accomplished for improvements to operations, management, and administrative process; (6) community benefits resulting from the acquisition; (7) impacts on bond ratings and investment community's view of the acquisition; (8) efficiencies and economies of scope and scale resulting from the acquisition; (9) liability avoidance or mitigation as a result of the acquisition; and, (10) effect on customer rates.
- 16. In light of the factors set forth in Finding of Fact No. 15, the merger between Atmos Energy Corporation and TXU Gas Company, Ltd. was consistent with the public interest.

Interim Rate Adjustments

- 17. Atmos Pipeline Texas made seven interim rate adjustments that were considered in these proceedings pursuant to the interim rate adjustment provisions of Tex. Util. Code Ann. § 104.301. Those cases were docketed as GUD Nos. 9560, 9615, 9664, 9726, 9788, 9855, 9950.
- 18. The Earnings Monitoring Reports that were filed with the interim rate adjustments referenced in Finding of Fact No. 17 above were properly filed by Atmos Pipeline Texas.
- 19. The allocation of Shared Services included in the interim rate adjustment filings considered in this proceeding was just and reasonable.
- 20. The *ad valorem* taxes included in certain of the interim rate adjustments considered in this proceeding was not correctly calculated and a refund in the amount of \$1,134,253, should be made as set out in the attached schedule, Ad Valorem Tax GRIP Refund by Customer Class Plus Interest.
- 21. It is reasonable to have the refund ordered as part of this docket as a one-time refund to the Rate CGS and Rate PT customers.
- 22. Atmos Pipeline Texas did not over-earn on the allowable rate of return.
- 23. Expenses related to computers included in the interim rate adjustment filings considered in this case were reasonable and necessary to the operation of Atmos Pipeline Texas.
- 24. Interim rate adjustment filings made at the Railroad Commission are available for inspection by any interested party.

- 25. Interim rate adjustment filings include a level of detailed information not normally included in *Statement of Intent* cases.
- 26. The proceeding in this case allowed the parties an opportunity to review and challenge investments included in the interim rate adjustment filings considered in this case and it is not necessary to revise those procedures in future cases.
- 27. In order to avoid controversy, Atmos Pipeline Texas removed certain items from several the interim rate adjustment filings that were considered in this case.
- 28. Atmos Pipeline Texas included several of the previously removed items referenced in Finding of Fact No. 27 as part of its rate base calculation in this proceeding.
- 29. Except for the adjustment made in Finding of Fact Nos. 32 to 40 below, the capital investments included in the interim rate adjustment filings considered in this proceeding were just and reasonable.
- 30. Amounts voluntarily excluded from interim rate adjustment filings may be included in future *Statement of Intent* proceedings.
- 31. All capital investment included in the seven interim rate adjustment filings are subject to review and subject to refund.
- 32. Atmos Pipeline Texas has not established that the inclusion of meals, entertainment, lodging, travel in the Cost of Service using a threshold of \$50 per meal per person and \$250 per nights lodging expense is reasonable.
- 33. It is reasonable to include meals up to \$25 and under per meal per person and lodging up to \$150 and under per night in the Cost of Service. It is reasonable that these limitations be exclusive of taxes.
- 34. Atmos Pipeline Texas has not established, in this case, that it is reasonable to include in the Cost of Service any meal expense over \$25 and lodging expense over \$150.
- 35. It is reasonable to require a detailed receipt for all meals and lodging expenses included in the Cost of Service.
- 36. The removal of an additional \$51,687 in meals from the Cost of Service is reasonable.
- 37. Atmos Pipeline Texas has not established that the inclusion of artwork in the Cost of Service is reasonable.
- 38. The removal of \$46,552 in artwork is reasonable.
- 39. Atmos Pipeline Texas has not established that the allocated cost from Shared Service for the Mississippi Billing system is reasonable.

40. The removal of \$7,174 for Project No. 010.11279 for the Mississippi Billing System is reasonable.

Rate Base

- 41. The proposed level of adjusted rate base included by Atmos Pipeline Texas in this case is not reasonable.
- 42. The calculations of accumulated deferred income taxes, as reflected in the attached schedules, are just and reasonable.
- 43. Atmos Pipeline Texas correctly adjusted the charitable contribution carryover included in its calculation of accumulated deferred income taxes.
- 44. Atmos Pipeline Texas included an advance payment for compressor equipment in its rate base calculation.
- 45. The advance payments should have been included in construction work in progress.
- 46. No showing was made that an allowance for construction work in progress is required in this case and accordingly the prepayments for compressor equipment may not be included in the company's calculation of base rates.
- 47. Atmos Pipeline Texas did not establish that the funds collected for FAS 106 are restricted or dedicated to FAS 106 and it is reasonable that an external fund be established as has been the case for the other states where Atmos Energy Corporation conducts business.
- 48. The FAS 106 liability calculation reflected on the attached schedules is just and reasonable.
- 49. It is reasonable for Atmos Pipeline Texas to use a 13-month average ended March 31, 2010, to determine Working Gas in Storage value.
- 50. It is reasonable that the 13-month average for Working Gas in Storage is \$150,781,860, for the cost of service calculation in this proceeding.
- 51. It is not reasonable to presume NYMEX futures is a benchmark for determining physical delivery prices for the purpose of determining the prices a utility might pay for gas for future periods.
- 52. It is not reasonable to extend the test-year period for one or more accounts to manipulate the results.

- 53. The Working Gas in Storage calculation reflected on the attached schedules is just and reasonable.
- 54. An adjustment to the revenue lag is reasonable if the revenue from the non-regulated customers is treated as a credit in this proceeding as it is not reasonable to include the revenue lag days for the non-regulated transportation customers in the calculation of the revenue lag for Atmos Mid Tex.
- 55. The cash working capital calculations reflected on the attached schedules is just and reasonable.

Shared Service Unit Allocation

- 56. Atmos Pipeline Texas employees a four factor allocation methodology to allocate general plant, materials and supplies, accumulated deferred income taxes, injuries and damages reserve and certain adjustments to rate base.
- 57. The components of the four factor formula are gross direct property and equipment, number of customers, operating expenses, and operating income.
- 58. The methodology has been previously adopted by the Railroad Commission for allocation of costs to Atmos Mid Tex and produces a reasonable allocation of costs.

Operating Expenses

- 59. Base labor expenses of Atmos Pipeline Texas employees is derived from the following operating division: Direct labor expenses from Atmos Pipeline Texas employees, Atmos Mid Tex, and Shared Services labor allocated to Atmos Pipeline Texas.
- 60. Atmos Pipeline Texas did not establish that an adjustment to the test-year level of base-labor expenses was just and reasonable as the increasing trend of test-year expenses is accurately captured in the test-year data.
- 61. Rates are typically based upon test-year data and the Railroad Commission has previously established payroll expenses based upon the test-year level of expenses.
- 62. Atmos Pipeline Texas established that the proposed adjustment due to merit increases made after the end of the test year was a known and measurable change and it is appropriate to make an adjustment to reflect that change.
- 63. Atmos Pipeline Texas did not accurately calculate the adjustment because the adjustment made did not reflect the fact that Atmos Pipeline Texas provides labor to other divisions of Atmos Energy Corporation. Those labor expenses are charged to those over divisions.

- 64. Atmos Pipeline Texas has established that the medical and dental expenses incurred during the test year are just and reasonable.
- 65. Atmos Pipeline Texas has established that the overtime expense level established during the test year is just and reasonable and no adjustment is required.
- 66. Customers and shareholders of Atmos Pipeline Texas derive a benefit from the incentive compensation programs offered by the company and it is appropriate that the expenses for incentive compensation of direct employees be included in the cost of service calculation as they are just and reasonable expenses.
- 67. It is also appropriate that shareholder bear the burden of expenses for incentive compensation programs of the division that provide services to other divisions of Atmos Energy Corporation.
- 68. Atmos Pipeline Texas has established that expenses for the pension account plan are just and reasonable.
- 69. The Supplemental Executive Benefit Plan is provided to employees that enter into a non-compete agreement and who have been designated by the Board of Directors. Shareholders and customers benefit from the program and it is reasonable that the cost of service calculation include expenses for the SEBP program expenses associated with direct employees of Atmos Pipeline Texas.
- 70. Expenses associated with Cost Center 1905, Outside Director Retirement Costs, have been previously included in the calculation of the cost of service. These expenses are a necessary expense of publicly traded companies and it is just and reasonable to include those expenses in the cost of service calculation of the company.

Depreciation Expense

- 71. The company's proposed depreciation expenses, as reflected in the attached schedules are just and reasonable.
- 72. Atmos Pipeline Texas correctly calculated the service life parameters for Accounts 352, 354, 367, 368, and 369.
- 73. The net salvage calculation included in the company's cost of service is just and reasonable for Account 352. The historical analysis is consistent with the functional data, experience of the company and industry experience for this account.
- 74. The net salvage calculation included in the company's cost of service is just and reasonable for Account 367. The analysis is consistent with the historical analysis, and industry experience for this account.

- 75. The expenses of Blueflame Insurance, an affiliate of Atmos Pipeline Texas, are reasonable and necessary for the provision of natural gas service provided by the company.
- 76. The price to Atmos Pipeline Texas by Blueflame is not higher than the price charged by Blueflame to its other affiliates or divisions or to a nonaffiliated person for insurance.
- 77. The Railroad Commission has previously found that the services provided by Blueflame were reasonable and necessary.

Revenues

- 78. Atmos Pipeline Texas has established that the calculation of Other Revenues shown in the attached schedules is just and reasonable.
- 79. The company has included revenues for blending and treating fees.
- 80. It is reasonable to credit the revenue requirement for Other Revenue to determine the rates for Rate CGS and Rate PT classes.
- 81. It is reasonable to use a test year end, as adjusted, for Other Revenue.
- 82. It is reasonable to include retention gas sales in Other Revenue as a reduction to the revenue requirement.
- 83. It is reasonable in this instance to calculate retention gas sales value using an average over a four year period at a current market price.
- 84. It is reasonable to use a capital structure of 50.50% common equity and 49.50% long-term debt for Atmos Pipeline Texas.
- 85. It is reasonable to use a cost of debt of 6.87% for Atmos Pipeline Texas.
- 86. It is reasonable to use a proxy group of similar companies to Atmos Pipeline Texas in the pipeline transmission business to determine a return on equity.
- 87. It is reasonable to use a constant growth Discounted Cash Flow Model for analysis to determine return on equity.
- 88. It is reasonable to use a quarterly growth Discounted Cash Flow Model for analysis to determine return on equity.
- 89. It is reasonable to use 30, 90, and 180-day ranges of average high and low share prices in the Discounted Cash Flow Model analysis.

- 90. It is reasonable to use a Capital Asset Pricing Model for analysis to determine return on equity.
- 91. It is reasonable to use a 90-day average of the 10-year Treasury Bond yield as a risk free rate.
- 92. It is reasonable that return on equity be set at 11.80%
- 93. An overall rate of return in this case of 9.361% is just and reasonable.
- 94. The evidence in this case established that a calculation of state gross margin tax based upon regulated operations and operations within the State of Texas is just and reasonable. Atmos Pipeline Texas has established that its calculation of the state gross margin tax and is just and reasonable.
- 95. Atmos Pipeline Texas has established that its calculation of federal income taxes as reflected in the attached schedules is just and reasonable.
- 96. Atmos Pipeline Texas has established that the allocation of storage and transmission costs is just and reasonable and that those expenses are generated primarily by the city gate service customers.
- 97. The fixed cost allocation as proposed in this case is just and reasonable: The system is designed to satisfy the capacity requirements of the human needs customers during peak demand; peak demand determines the amount of transmission capacity and costs incurred by the company; and, no marginal or incremental cost of capacity are incurred when additional volumes of gas are transported.
- 98. Shifting 30% to 50% of the fixed costs to 62 individual customers is unreasonable and would serve only to subsidize the costs of providing service to the city gate service customers.
- 99. In GUD No. 9400, the Railroad Commission determined that the revenues from the non-regulated operations of Atmos Pipeline Texas should be treated as a revenue credit.
- 100. Allocating costs to the Other Revenue customer class would treat those customers as if the customer were operating under a tariffed rate.
- 101. The proposal of Atmos Pipeline Texas to treat the revenues from the non-regulate customers as a revenue credit is just and reasonable.
- 102. The straight fixed variable (SFV) rate design is a rate design that has been adopted by the majority of interstate natural gas pipelines in the United States and it sends proper price signals.

- 103. It is reasonable that the Railroad Commission of Texas have Atmos Pipeline Texas create a Regulatory Asset as a result of Findings of Facts 64 and 65 in GUD No. 9869, Final Order Nunc Pro Tunc for Ad Valorem Tax and ADIT associated with working gas in storage.
- 104. It is reasonable to recover the Regulatory Asset through a surcharge on Rider CGS-Mid-Tex to only Atmos Mid-Tex through the Rider WGIS Working Gas Regulatory Asset Surcharge.
- 105. It is reasonable for the Commission to authorize the Rider WGIS Working Gas Regulatory Asset Surcharge.
- 106. It is reasonable that interest on the unrecovered balance accrue at the same rate of interest as the then-current deposit rate set by the Commission.
- 107. It is reasonable that the Regulatory Asset cease accruing upon implementation of the rates approved in GUD No. 10000.
- 108. It is reasonable that the surcharge be billed to Atmos Mid-Tex for twelve months.

Tariffs

- 109. The Railroad Commission of Texas has the authority approve adjustment mechanisms such as the Rider Rev because market forces control the revenues recovered from the non-regulated customers.
- 110. The Rider Rev is a reasonable mechanism to provide an annual adjustment to Rate CGS-Mid-Tex, and Rate CGS-other and Rate PT for 75% of the difference between the amount of Other Revenue determined in GUD No. 10000 and the amount of Other Revenue determined on an annual basis.
- 111. It is reasonable for the Rider Rev to be implemented on a three-year trial basis.
- 112. It is reasonable to review the results of Rider Rev at the end of three-years to determine if the Rider is achieving its stated goal and for the Commission to determine if the Rider Rev will be continued or eliminated.
- 113. It is reasonable that the Rider Rev specifically identify the allocation method to Rate CGS-Mid-Tex, Rate CGS-Other and Rate PT customer classes.
- 114. It is reasonable that the Rider Rev's review period be extended from 30-days to 60-days before its implementation.
- 115. It is reasonable that Atmos Pipeline Texas provide notice to the customer of a rate increase or decrease that results from a Rider Rev adjustment.

- 116. It is reasonable that the Rider Rev incorporate language that will allow for Railroad Commission denial and subsequent appeal by Atmos Pipeline Texas.
- 117. It is reasonable that the Rider Rev provide for Railroad Commission discovery during the review period with a five business day response from Atmos Pipeline Texas.
- 118. It is reasonable to require an additional level of detail supporting the calculation of Rider Rev's Other Revenue and any adjustments to Other Revenue from the per book amount in its annual report.
- 119. It is reasonable to docket the annual review as a change in rates.
- 120. It is reasonable that if the change in rates under Rider Rev generates an increase in revenue of more than 2 ½%, then a hearing shall be held.
- 121. It is reasonable that the Rider Rev provide for cost recovery for the review by the Railroad Commission.
- 122. Atmos Pipeline Texas has established that the cost of service without application of a revenue credit for revenues from non-regulated customers would be \$226,763,998.
- 123. The rates necessary to recover \$226,763,998 would be as follows:
 - a. Rate CGS Mid-Tex: Capacity Charge per MDQ, 6.2984 Mcf, Mid Tex WGIS Charge, \$0.8134 per Mcf, and a Usage Charge per MMBtu \$0.0276.
 - b. Rate CGS CoServ: Capacity Charge per MDQ, 6.2984, and a Usage Charge per MMBtu, \$0.0276.
 - c. Rate CGS City of Rising Star and West Texas Gas: Capacity Charge per MDQ, 6.2984 and a Usage Charge per MMBtu of \$0.0276.
 - d. Rate PT: Capacity Charge, 4.0732, Usage Charge \$0.0163.
- 124. Atmos Pipeline Texas has established that revenues from the non-regulated customers, Other Revenues are \$83,723,391.63. Thus, the rates must be adjusted to allow recovery of \$143,049,141.
- 125. The rates necessary to recover \$141,882,173 are as follows:
 - a. Rate CGS Mid-Tex: Capacity Charge per MDQ, 3.6263 Mcf, Mid Tex WGIS Charge, \$0.8134 per Mcf, and a Usage Charge per MMBtu \$0.0276.
 - b. Rate CGS CoServ: Capacity Charge per MDQ, 3.6263, and a Usage Charge per MMBtu, \$0.0276.
 - c. Rate CGS City of Rising Star and West Texas Gas: Capacity Charge per MDO, 3.6263 and a Usage Charge per MMBtu of \$0.0276.
 - d. Rate PT: Capacity Charge, 2.3061, Usage Charge \$0.0163.

CONCLUSIONS OF LAW

- 1. Atmos Pipeline Texas is a "Gas Utility" as defined in Tex. Util. Code Ann. §101.003(7) (Vernon 2007 & Supp. 2010) and §121.001(2007) and is therefore subject to the jurisdiction of the Railroad Commission of Texas (Commission).
- 2. The Railroad Commission of Texas (Commission) has jurisdiction over Atmos Pipeline Texas and its *Statement of Intent* under Tex. UTIL. CODE ANN. §§ 102.001, 103.022, 103.054, & 103.055, 104.001, and 104.201 (Vernon 2007).
- 3. Under Tex. Util. Code Ann. §102.001 (Vernon 2007), the Commission has exclusive original jurisdiction over the rates and services of a gas utility that distributes natural gas in areas outside of a municipality and over the rates and services of a gas utility that transmits, transports, delivers, or sells natural gas to a gas utility that distributes the gas to the public.
- 4. This Statement of Intent was processed in accordance with the requirements of the Gas Utility Regulatory Act (GURA), and the Administrative Procedure Act, Tex. Gov'T CODE ANN. §§2001.001-2001.902 (Vernon 2008) (APA).
- 5. In accordance with the stated purpose of the Texas Utilities Code, Subtitle A, expressed under Tex. Util. Code Ann. §101.002 (Vernon 2010), the Commission has assured that the rates, operations, and services established in this docket are just and reasonable to customers and to the utilities.
- 6. TEX. UTIL. CODE ANN. §104.107 (Vernon 2007) provides the Commission authority to suspend the operation of the schedule of proposed rates for 150 days from the date the schedule would otherwise go into effect.
- 7. The proposed rates constitute a major change as defined by TEX. UTIL. CODE ANN. §104.101 (Vernon 2007).
- 8. In accordance with Tex. UTIL. CODE §104.103 (Vernon 2007), 16 Tex. ADMIN. CODE ANN. §7.230 (2010), and 16 Tex. ADMIN. CODE ANN. § 7.235 (2010), adequate notice was properly provided.
- 9. In accordance with the provisions of Tex. Util. Code Ann. §104.102 (Vernon 2007), 16 Tex. Admin. Code Ann. §7.205 (2010), and 16 Tex. Admin. Code §7.210 (2010), Atmos Pipeline Texas filed its Statement of Intent to change rates.
- 10. Atmos Pipeline Texas failed to meet its burden of proof in accordance with the provisions of Tex. Util. Code Ann. §104.008 (Vernon 2007) on the elements of its requested rate increase identified in this order.
- 11. The revenue, rates, rate design, and service charges proposed by Atmos Pipeline Texas are not found to be just and reasonable, not unreasonably preferential, prejudicial, or

- discriminatory, and are not sufficient, equitable, and consistent in application to each class of consumer, as required by TEX. UTIL. CODE ANN. §104.003 (Vernon 2007).
- 12. The revenue, rates, rate design, and service charges proposed by Atmos Pipeline-Texas, as amended by the Commission and identified in the schedules attached to this order, are just and reasonable, are not unreasonably preferential, prejudicial, or discriminatory, and are sufficient, equitable, and consistent in application to each class of consumer, as required by Tex. Util. Code Ann. §104.003 (Vernon 2007).
- 13. The overall revenues as established by the findings of fact and attached schedules are reasonable; fix an overall level of revenues for Atmos Pipeline Texas that will permit the company a reasonable opportunity to earn a reasonable return on its invested capital used and useful in providing service to the public over and above its reasonable and necessary operating expenses, as required by Tex. Util. Code Ann. § 104.051 (Vernon 2007); and otherwise comply with Chapter 104 of the Texas Utilities Code.
- 14. The revenue, rates, rate design, and service charges proposed will not yield to Atmos Pipeline Texas more than a fair return on the adjusted value of the invested capital used and useful in rendering service to the public, as required by Tex. UTIL. CODE ANN. § 104.052 (Vernon 2007).
- 15. The rates established in this docket comport with the requirements of Tex. UTIL. CODE ANN. §104.053 (Vernon 2007) and are based upon the adjusted value of invested capital used and useful, where the adjusted value is a reasonable balance between the original cost, less depreciation, and current cost, less adjustment for present age and condition.
- 16. The rates established in this case comply with the affiliate transaction standard set out in Tex. Util. Code Ann. § 104.055 (Vernon 2007). Namely, in establishing a gas utility's rates, the regulatory authority may not allow a gas utility's payment to an affiliate for the cost of a service, property, right or other item or for an interest expense to be included as capital cost or an expense related to gas utility service expect to the extent that the regulatory authority finds the payment is reasonable and necessary for each item or class of items as determined by the regulatory authority. That finding must include (1) a specific finding of reasonableness and necessity to each class of items allowed; and (2) a finding that the price to the gas utility is not higher than the prices charged by the supplying affiliate to its other affiliates or divisions or to a nonaffiliated person for the same item or class of items.
- 17. In accordance with Tex. UTIL. CODE ANN. §104.054 (Vernon 2007) and Tex. Admin. Code §7.5252, book depreciation and amortization was calculated on a straight line basis over the useful life expectancy of Atmos Pipeline Texas's property and facilities.
- 18. In this proceeding, Atmos Pipeline Texas has the burden of proof under TEX. UTIL. CODE ANN. §104.008 (Vernon 2007) to show that the proposed rate changes are just and reasonable.

- 19. TEX. UTIL. CODE ANN. § 104.301, allows a utility to make an interim rate adjustment and requires that the utility that files an interim rate adjustment must also file a rate case under Subchapter C of the Gas Utility Regulatory Act (Statement of Intent Proceeding) at the fifth year anniversary of the effective date of the first interim rate adjustment.
 - a. There is nothing in Tex. Util. Code Ann. § 104.301 that precludes a utility from voluntarily removing certain expenditures in its interim rate adjustments and then including those expenditures in the subsequent Statement of Intent Proceeding.
 - b. All interim rate adjustments are subject to refund in the subsequent Statement of Intent Proceeding.
 - c. All interim rate adjustments of Atmos Pipeline Texas were reviewed in this proceeding and except for the items set out in Finding of Fact Nos. 17 40 above were found to be just and reasonable.
- 20. Rate case expenses for GUD No. 10000 will be considered by the Commission in accordance with Tex. UTIL. CODE ANN. §104.008 (Vernon 2010), and 16 Tex. Admin. Code §7.5530 (2010), in a separate proceeding.
- 21. Atmos Pipeline Texas is required by 16 Tex. Admin. Code §7.315 (2008) to file electronic tariffs incorporating rates consistent with this Order within thirty days of the date of this Order.
- 22. Atmos Pipeline Texas is required by 16 Tex. Admin. Code § 7.310 to utilize the Federal Energy Regulatory Commission's (FERC) Uniform System of Accounts (USOA) prescribed for natural gas companies.
- 23. The Railroad Commission of Texas has the authority under Tex. UTIL. CODE §§ 102.001, 102.104, 104.001, 121.151 and the Federal Energy Regulatory Commission's Uniform System of Accounts, Definitions, No. 31, Regulatory Asset to authorize and approve a Regulatory Asset.

IT IS THEREFORE ORDERED that Atmos Pipeline – Texas's proposed schedule of rates is hereby **DENIED**.

IT IS FURTHER ORDERED that the rates, rate design, and service charges established in the findings of fact and conclusions of law and shown on the attached Schedules for Atmos Pipeline – Texas are APPROVED.

IT IS FURTHER ORDERED that a refund in the amount of \$1,134,253, shall be made as set out in the attached schedule, Ad Valorem Tax GRIP Refund by Customer Class Plus Interest.

IT IS FURTHER ORDERED that in future rate proceedings Atmos Pipeline – Texas shall include detailed receipts for all meal and lodging expenses and that there shall be a rebuttable presumption that meal expenses \$25 and under and lodging expenses \$150 and under are just and

reasonable and that Atmos Pipeline – Texas must establish that any expenses in excess of \$25 for meals and \$150 for lodging are just and reasonable, exclusive of taxes.

IT IS FURTHER ORDERED that, in accordance with 16 Tex. Admin. Code §7.315, within 30 days of the date this Order is signed, Atmos Pipeline – Texas shall file tariffs with the Gas Services Division. The tariffs shall incorporate rates, rate design, and service charges consistent with this Order, as stated in the findings of fact and conclusions of law and shown on the attached Schedules.

IT IS FURTHER ORDERED that all proposed findings of fact and conclusions of law not specifically adopted in this Order are hereby **DENIED**. IT IS ALSO ORDERED that all pending motions and requests for relief not previously granted or granted herein are hereby **DENIED**.

This Order will not be final and effective until 20 days after a party is notified of the Commission's order. A party is presumed to have been notified of the Commission's order three days after the date on which the notice is actually mailed. If a timely motion for rehearing is filed by any party at interest, this order shall not become final and effective until such motion is overruled, or if such motion is granted, this order shall be subject to further action by the Commission. Pursuant to Tex. Gov't Code §2001.146(e), the time allotted for Commission action on a motion for rehearing in this case prior to its being overruled by operation of law, is hereby extended until 90 days from the date the order is served on the parties.

All requested findings of fact and conclusions of law which are not expressly adopted herein are denied. All pending motions and requests for relief not previously granted or granted herein are denied.

SIGNED this 18th day of April, 2011.

ORGANIZATION bill analysis 4/11/2019

RESEARCH

Considering total employee compensation when setting gas utility rates SUBJECT:

COMMITTEE: State Affairs — favorable, without amendment

VOTE: 11 ayes — Phelan, Deshotel, Harless, Holland, Hunter, P. King, Parker,

Raymond, E. Rodriguez, Smithee, Springer

0 nays

2 absent — Hernandez, Guerra

WITNESSES: For — Jason Ryan, CenterPoint Energy; Mark Bender, Texas Gas

> Service; (Registered, but did not testify: Julia Rathgeber, Association of Electric Companies of Texas; Chance Sampson, Entergy Texas, Inc.; Lee Parsley, Texans for Lawsuit Reform; Thure Cannon, Texas Pipeline

Association)

Against — Thomas Brocato, Steering Committee of Cities Served by Oncor, Steering Committee of Cities Served by Atmos, Texas Coalition for Affordable Power; (Registered, but did not testify: Alfred Herrera, Counsel for Cities Advocating Reasonable Deregulation, Texas Coast Utilities Coalition of Cities, Alliances of CenterPoint Municipalities, Atmos Texas Municipalities; Shanna Igo, Texas Municipal League)

On — (Registered, but did not testify: Mark Evarts, Railroad Commission of Texas)

DIGEST:

HB 1767 would require the Railroad Commission, when establishing a gas utility's rates, to presume that employee compensation and benefits expenses were reasonable and necessary if the expenses were consistent with recent market compensation studies.

"Employee compensation and benefits" would include base salaries, wages, incentive compensation, and benefits. The term would not include pension and other postemployment benefits.

HB 1767 House Research Organization page 2

HB 1767 would apply only to a proceeding for the establishment of rates for which the regulatory authority had not issued a final order or decision before the bill's effective date.

The bill would take immediate effect if finally passed by a two-thirds record vote of the membership of each house. Otherwise, it would take effect September 1, 2019.

SUPPORTERS SAY:

HB 1767 would require the total compensation of gas utility employees, based on market studies, to be considered by the Railroad Commission as a reasonable and necessary expense of a utility. The bill would make rate regulation more predictable, more efficient, and less litigious.

The calculation of total compensation is dependent on market studies, which are used to determine the total of base and contingency pay for employees that was appropriate for the utility to remain competitive in the market.

Allowing gas utilities to recover funds for the total compensation of their employees would be appropriate, as these expenses are necessary for them to operate in a safe and effective manner and to retain employees. The uniform consideration of these expenses also would help reduce litigation on rate regulation, ultimately saving ratepayers money.

The bill would use the typical standard for determining compensation through market studies, which gas utilities already use, and simply codify a process already in place. Since contingency pay still would depend on employee performance, this bill would not remove employee incentives.

OPPONENTS SAY:

HB 1767 would allow a gas utility to inappropriately include bonus payments for employees in rates with little or no oversight.

Because the bill would automatically deem compensation "reasonable and necessary" as long as a utility produced a study supporting the total compensation rate, there would be little to no review of what the

Workpapers of G. David Scalf Page 27 of 27

HB 1767 House Research Organization page 3

compensation should be. These costs would be passed on to ratepayers, who should not be responsible for covering them. Utility shareholders, not ratepayers, should bear the cost of this additional employee compensation, in keeping with standard practices. Allowing bonus payments in the rate setting process also would remove incentives for employees.

The bill is vague because it would not provide a definition of what constituted consistency with market studies or how recent the studies should be. Because utilities often pay for these compensation studies themselves, the process would lack independent oversight.

Oregon Public Utility Commission Pension Survey "Pension Treatment in Rate Making Survey" Summary Report

Thursday, March 28, 2013

This document is a compilation of the Public Utility Commission of Oregon (OPUC) survey, "Pension Treatment in Rate Making." The survey was sent to and responded by the fifty state utility commissions, The District of Columbia, and the City of New Orleans. The OPUC greatly appreciates the time and effort taken by the commission to respond to the survey.

The answers provide below will help to inform all of the utility commissions about the types of regulatory recovery utilities in the United States are receiving from their utility regulatory authorities. It also identifies by the commission answers where in the United States that these regulatory methodologies are being applied.

Question - 1

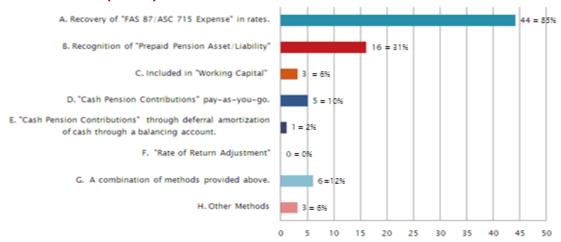

Please pick which method, listed below from A through H, that your commission used as its basis for deciding the level of recovery that companies receive in rates for cash contributions and pension expenses related to the funding and operation of...

(Response Rate: 100% (N=52) Question Type: Choose many)

| A D | |
|---|----|
| A. Recovery of "FAS 87/ASC 715 Expense" in rates (Defined as the Net Periodic Pension (Benefit)/Cost) | 44 |
| B. Recognition of "Prepaid Pension Asset/Liability" (Delta of defined benefit contribution minus FAS 87/ASC 715 expense; recognized in rates through allowing a return on amount invested in asset) | 16 |
| C. Included in "Working Capital" (As an adjustment to the balance of working capital) | 3 |
| D. "Cash Pension Contributions" pay-as-you-go (Use of cash contributions instead of the accrual based FAS 87/ASC 715 by including cash contributions during the test-year in the revenue requirement) | 5 |
| E. "Cash Pension Contributions" (deferral and amortization of cash contributions through a balancing account) | 1 |
| F. "Rate of Return Adjustment" (An adjustment to the allowed rate-of-return) | 0 |
| G. "Combination of Methods" of the above | 6 |
| H. "Other Method(s)" | 3 |
| Total Responses | 78 |

Note: Will not add up to 52 (number of participating commissions) because more than one of the above statements could be chosen as applicable to explain commission orders related to pension expenses.

Question - 1 (Table)

Question - 1 (Text Field - 1)

If you selected multiple methods, please provide a brief explanation of how the methods are used

Response Rate: 35% (N=18) Question Type: Paragraph

South Carolina Public Service Commission - "A rider comprised of the difference between the FAS-87 expense in rates and the FAS-87 project subject to true up."

Pennsylvania Public Utility Commission – "One company that I know of uses FAS 87 accrual method (PPL). Generally speaking, for all others, we review the company's actuarial study and verify whether claim falls between ERISA and IRC amounts."

Oklahoma Corporation Commission – "A combination of A and B."

Public Service Commission of West Virginia - Virginia Historically the WV PSC has recognized pensions based on the cash contribution method (ERISA) and continues to utilize that method for most private utilities. Recently in Mountaineer Gas (case #11-1627-E-42T), the Commission recognized pension expense at the level of the FAS 87 accured expense, but only on condition proposed by Mountaineer that they will fund the pension plan annually at the FAS 87 expense level (even if the FAS 87 level exceeds the ERISA cash funding requirement). In addition, the Commission has allowed pension recovery using the FAS 87 accrual level for American Water Works Service Company charges to West Virginia-American because the majority of the 21 states regulating AWW subsidiaries recognize FAS 87 for pension recovery."

Kentucky Public Service Commission – "KYPSC does not require a specific recovery method. While ash "pay-as-you-go" was used historically, in some recent cases have transitioned to FAS 87/ASC 715 expense."

New Mexico Public Regulation Commission – "The NMPRC historically has allowed the FAS 87 Expense to be included as a recoverable operating expense. In Case 07-

00319-UT, however, the NMPRC also allowed the applicant utility, Southwestern Public Service Company, to include a prepaid pension asset because the utility demonstrated that the pre-paid pension asset caused a negative pension expense. The fact that the prepayment resulted from a high rate of return on the pension fund, as opposed to the utility having made discretionary excess contributions to the fund, appears to have caused the NMPRC to be more favorably disposed to allow inclusion of the prepaid pension asset in rate base. This is the most recent litigated rate case that addressed this issue."

Public Utility Commission of Utah –"In Utah there is only one investor owned utility. Older employees are grandfathered into a defined benefit plan along with the union employees (FASB 87). Effective June 1, 2007, the Company shifted its benefit determination for the non-union workforce to a cash balance plan/401K approach. For non-union employees, all vested benefits under the current final average pay approach were frozen as of May 31, 2007 and will be provided to employees at the time of retirement. Effective June 1, 2007, the Company established an account for each employee that will grow based on credits of 6.5 percent of annual pay (base plus incentive) plus 4.0 percent of pay in excess of the Social Security taxable wage base (\$97,500 in 2007). In addition, on an annual basis each account will receive an interest credit based on the account balance and the annual credit rate. A transition benefit was provided for employees who are age 40 or older on May 31, 2007. Employees falling in this category will receive additional pay credits for five years (ending in 2012), structured as follows: Year 1-3 = 4.0 percent Year 4 = 2.5 percent Year 5 = 1.5 percent All new hires eligible to participate in the pension plan after June 30, 2006 will receive a pay credit rate of 5.0 percent The Company no longer offers defined benefit plan to those not grandfathered into old plan."

District of Columbia Public Service Commission —"The Commission allows the electric and natural gas utilities to use the ASC 715 method to account for Pension by reflecting in the utility's operating expense the actuarily determined net periodic Pension cost or benefit. However as described in a later survey response, the Commission has allowed the Electric utility to include in rate base the electric utility's prepaid pension asset balance.

Maine Public Utilities Commission – "In the Stipulation approved in Docket No. 2007-215 (paragraph 19), it was agreed that the utility would amortize a regulatory liability representing the actuarial gains not yet recognized in pension expense amounts over 5 years. The liability was required due to the merger of the utility and a new parent."

California Public Utilities Commission – "The answer above is to the best of my knowledge."

New York State Public Service Commission – "NYPSC allows ASC 715 expense with reconciliation so to recover actual expense. Carrying charges accrued to ratepayers on balance of "internal reserve" where pension costs provided in rates (expense plus amounts charged to CWIP) are greater than contributions to fund."

Vermont Public Service Department - "In Vermont, the expense under FAS 87 is recoverable in rates. Additionally, the net asset or liability balance is included in the rate base."

Illinois Commerce Commission - Pension expense is based on FAS 87 Expense. In addition, a return on the Pension Asset recorded on the utilities books has been approved for Commonwealth Edison in rate cases since Docket No. 05-0597.

Massachusetts Department of Public Utilities - We use both A and D.

New Jersey Board of Public Utility - Recovery of FAS 87 expense as well as adding the prepaid pension balance to cash working capital study to get a return on that balance.

Minnesota Public Utilities Commission - A. on a case by case basis has allowed recovery as a test year cost either the FAS 87 cost or an average of several years of FAS 87 cost. B.In one instance the Commission has allowed the excess of the company's contributions over the amounts recovered in rate to be included in rate base as part of a settlement.

Virginia State Corporation Commission - The expensed amount of the NPBC is included in O&M, the accrued Pension Asset/Liability is usually recognized as a working capital adjustment in a lead/lag study.

Public Utility Commission of Texas - Pension expense determined in rate case by FAS 87. Each year thereafter, reserve account is debited or credited for difference between amount included in rates and that year's FAS 87 pension expense amount. Next rate case any deficit or surplus in the reserve account is amortized over a reasonable time with the unamortized balance earning a return.

Question - 1 (Text Field - 2)

You answered H. "Other Methods, to question 1," please provide a brief explanation of the method used.

Response Rate: 6% (N=3) Question Type: Paragraph

Tennessee Regulatory Authority - Latest minimum funding level in latest actuarial report allowed as pension expense in rates.

Missouri Public Service Commission - Prior rate recognition of FAS 87 pension credits is also amortized to cost of service in current cases. For most Missouri utilities, the amount of the required pension case contributions is set equal to the utilities' FAS 87/ASC 715 annual expenses.

Washington Utilities and Transportation Commission - We also use a four-year average of cash contributions to the pension asset. Different utilities may get different treatment.

Question - 2

Has your commission allowed the inclusion in a company's "rate base" any portion of a company's pension expenditures that are excess contributions over FAS 87/ASC 715 based expenses or result in "pre-paid pension expense" in a company's "rate base" used for setting rates, or are deferred pension costs allowed a carrying charge?

Table – Question – 2

Question - 2 (Text Field - 1):

Has your commission allowed the inclusion in a company's "rate base" any portion of a company's pension expenditures that are excess contributions over FAS 87/ASC 715 based expenses or result in "pre-paid pension expense" in a company's "rate base" used for setting rates, or are deferred pension costs allowed a carrying charge?

South Carolina Public Service Commission – "The difference between the FAS-87 expense in rates and the projected FAS-87 expense is amortized over 30 years with the unamortized balance in rate base that earns a return at the allowed ROR."

Louisiana Public Service Commission - Allowed as a pre-payment as a rate base

Oklahoma Corporation Commission – "Prepaid pension assets are generally included in rate base. However, this is a contentious item amongst the parties to the cause. Also the rate of return/cost of debt allowed is also a contentious item."

New Hampshire Public Utilities Commission – "Prepaid expenses."

Missouri Public Service Commission - "Any additional pension funding by the utilities above the FAS 87/ASC 715 level associated with minimum ERISA or Pension Protection Act of 2006 requirements is generally allowed to be deferred on the utilities' balance sheets, and then placed in rate base in subsequent general rate proceedings."

New Mexico Public Regulation Commission - "As explained above, the NMPRC has allowed a pre-paid pension asset to be included in rate base, earning the utility's allowed

weighted average cost of capital, if the utility demonstrated satisfactorily that the pre-paid pension asset caused a negative pension expense."

New Orleans City Council Utilities Regulatory Office – "While "pre-paid pension expense" has been allowed, the level of contributions is closely monitored to ensure the Company is not over funding pension plans."

Connecticut Department of Public Utility Control – "This is done on a case by case basis depending on the circumstances of each case."

District of Columbia Public Service Commission - "In FC 1053 (See DC PSC Order No. 14712 issued on January 30, 2008). Pepco was allowed to include \$23.3 million in its rate base for prepaid asset/OPEB liability net of taxes. In that case, the Commission found that inclusion of Prepaid Pension Asset/OPEB Liability in the rate base is consistent with Commission precedent. In an earlier case concerning another utility (BA-DC), the Commission found that BA-DC was required to continue its policy of placing an amount equal to the SFAS accrual into an external funding mechanism to the extent that tax advantaged vehicles exist, with any accruals in excess of that amount applied as a reduction to rate base. In a subsequent case involving PEPCO, the Commission similarly found that "as in the BA-DC case, it is appropriate that PEPCO account for any amounts not externally funded ... as a reduction to the rate base." The Commission found that investor-supplied cash contributions have resulted in an asset from which PEPCO's customers receive a tangible benefit in the form of reduced pension expenses. Therefore, investors are entitled to earn a return on the capital they provided. If the Prepaid Pension Asset is included in rate base, the related OPEB Liability should also be included as a reduction. Both the asset and the liability result from the existence of a differential between the Company's obligation regarding future benefits owed to current employees and the level of those benefits the Company funds currently."

Rhode Island Public Utilities Commission – "The pension contributions in excess of the accrued liability are allowed a return in the pension reconciliation mechanism."

North Carolina Utilities Commission – "Excess contributions, typically, would be included in rate base."

New York State Public Service Commission – "With authorization of the NYPSC a NY utility can accrue carrying charges at its allowed rate of return where contributions to date are in excess of pension expense allowed in rates and charged to CWIP."

Vermont Public Service Department - Yes, when there is/was an unfunded pension obligation.

Illinois Commerce Commission - While the "pre-paid pension expense" has not been allowed for recovery in "rate base", utilities have been allowed to recovery a return on what it has recorded as a "pension asset" at the weighted average cost of capital in its

operating statement.

Colorado Public Utility Commission - The prepaid pension asset is also included.

New Jersey Board of Public Utility - If the utility's pension is prepaid, the 13 month average to the cash working capital requirement rolls into rate base.

Minnesota Public Utilities Commission - In one instance as part of a rate case settlement this was allowed.

Hawaii Public Utility Commission - We have a pension and OPEB tracking mechanism that is designed to provide for the recovery of pension and OPEB costs over time. By preventing the over or under recovery of costs, by establishing a prepaid pension asset or liability. The pension tracking mechanism ensures that over time the pension costs recovered through rates are based on the actuarially calculated NPPC as reported for financial reporting purposes and ensures that all amounts contributed to the pension trust fund are in amounts at least equal to actual NPPC and recoverable through rates. Thus, the test year NPPC is estimated and incorporated into rates in each rate case. Once new rates are effective and until rates are changed in a subsequent rate case, taht amount of NPPC in rates and the actual NPPC is separately tracked. The difference between the NPPC in rates and athe actuarially calculated NPPC for the year is charged/credited to a regulatory asset/liability. this unamortized regulatory asset/liability is included in rate base. When new raes are established in a rate case, the regulatory asset/liability is amortized over a five year period. The total test year pension costs is the test year NPPC in rtes plus or minus the amortization of the regulatory asset/liability. Also, the pension tracking mechanism allows the utilty to reverse the pension AOCI charge to equity and credate a regulatory asset for financial statement purposes.

Virginia State Corporation Commission - The expensed amount of the NPBC is included in O&M. The accrued Pension Asset/Liability is usually recognized as a working capital adjustment in a lead/lag study.

Public Utility Commission of Texas - Several years ago AEP companies made excess contributions to pension funds and were allowed to include these amounts in rate base. See PUCT Docket No. 33309

Michigan Public Service Commission - Our Commission uses the balance sheet method for working capital and all assets and liabilities associated with pension are included in working capital.

Question - 3

Has your commission applied an adjustment to a company's discount rate used to calculate its FAS 87/ASC 715 accrual based expenses used in setting rates? Response Rate: 100% (N=52) Question Type: Choose one

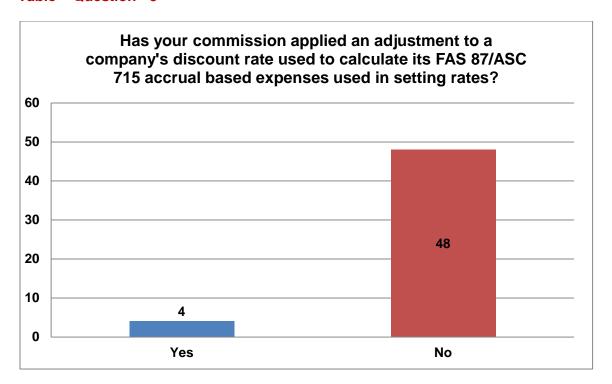

Yes - 4

Idaho Public Utilities Commission
Public Service Commission of Wisconsin
Connecticut Department of Public Utility Control
New Hampshire Public Utilities Commission

No - 48

Total Responses – 52

Table - Question - 3

Question - 3 (Text Field - 1):

Has your commission applied an adjustment to a company's discount rate used to calculate its FAS 87/ASC 715 accrual based expenses used in setting rates?

Idaho Public Utilities Commission - In 2003, the Utility decreased its discount rate prior to a test year for a general rate case from 8.5% to 8%, although the returns for the previous 15 years averaged 13%. The Commission found that the utility's change in discount rate was unwarranted. However, the issue was mute because the Utility had not been funding contributions for over 10 years, so the Commission didn't allow any recovery in rates

Public Service Commission of Wisconsin - No adjustments in recent years other than to include updated information from actuarial studies completed during Commission staff's audit of the forward looking test year.

Connecticut Department of Public Utility Control - The PURA adjusts the discount rate based on market conditions projected for the future.

New Hampshire Public Utilities Commission - It depends on company's filing and its actuarial study

Question - 4

Has the commission applied an adjustment to a Company's "rate-of-return" used to calculate a Company's FAS 87/ASC 715 based pension plan portfolio value used in setting rates?

Response Rate: 100% (N=52) Question Type: Choose one

Question - 4 (Text Field – 1)

Has the commission applied an adjustment to a Company's "rate-of-return" used to calculate a Company's FAS 87/ASC 715 based pension plan portfolio value used in setting rates?

Response Rate: 6% (N=3) Question Type: Paragraph

Connecticut Department of Public Utility Control - The PURA adjusts the rate of return on pension assets based on market conditions projected for the future.

New Hampshire Public Utilities Commission - ask for explanation on rate used, company may agree to change

Public Service Commission of Wisconsin – No adjustments in recent years other than to include updated information from actuarial studies completed during Commission staff's audit of the forward looking test year.

Question - 5

Has your commission recently performed, or is it currently performing, an investigation into pension related costs? If so, please select "Yes" and provide the docket number in the box below.

Table - Question - 6

Question – 6 (order numbers with descriptions)

If your commission's order reflecting its decision on this issue is not noted above, please provide the order number and a brief description in the box provided below.

California Public Utilities Commission - The answer to the above question is to the best of my knowledge. Would require extensive research to get a definitive "yes" or "no".

District of Columbia Public Service Commission - In Formal Case No. 1093, Washington Gas Light asks that it be allowed to include in rates the under collected balance of its Pension expenses, which it was allowed to defer and track since the last rate case. The outstanding balance earns a return using a Commission-approved rate. This balance is in excess of the amount already included in rate. This issue is still under consideration in Formal Case No. 1093. However, since this tracker mechanism has been in place for several years, it has been addressed in Formal Case No. 1016 (DC PSC Order No. 12986, issued on November 10, 2003).

Hawaii Public Utility Commission - Pension tracking mechanism approved in Docket No. 2005-0315, filed October 28, 2010, HELCO 2006 TY rate case.

Illinois Commerce Commission - 09-0263, 07-0566

Indiana Utility Regulatory Commission - Case is pending Cause No. 44075

Kansas Corporation Commission – 04-KCPE-1025-GIE The Commission allowed Kansas City Power and Light to earn a return on amounts in excess collected in rates. In the 10-KCPE-415-RTS rate case the Commission changed its mind and disallowed the utility the ability to earn a return on excess amounts.

Louisiana Public Service Commission - U-20925-2004 Evaluation is made during annual review of the formula rate plan.

Minnesota Public Utilities Commission - Minnesota Power has made such a request outside a rate case in Docket E-015/M-11-1264. An order has not been issued at this time.

New Mexico Public Regulation Commission - This issue has been addressed in the cases noted below.

New York State Public Service Commission - Case 07-G-0141, order issued 12/21/2007

Pennsylvania Public Utility Commission - n/a

Public Service Commission of West Virginia - Not in a formal case filing, but the Commission was presented such a proposal in the form of a Request For Accounting Change, where the West-Virginia American requested authorization to defer pension expense in excess of the level on which existing rates were determined. They requested authorization to defer under FAS 71. This case was never officially docketed and subsequently became moot when they filed a subsequent general rate increase petition.

Public Utilities Commission of Ohio - See Columbus Southern Power 11-351--EL-AIR (see page 7 of report)

South Dakota Public Utilities Commission - Not aware of any order addressing this issue specifically.

Pension Relevant Docket Numbers:

California Public Utilities Commission - SDG&E/SoCalGas A.10-012-005/-006 available on CPUC website.

Delaware Public Service Commission – In the matter of the petition of Delmarva Power and Light Company for authorization to defer certain charges to the Company's financial statements resulting from the impact of recent economic developments on pension costs (filed May 1, 2009 – Docket 09-182.

Kansas Corporation Commission - 07-GIMX-1041-GIV

Michigan Public Service Commission - We do audit pension expense with each case, but typically adopt FAS 87 expense.

New Mexico Public Regulation Commission - Although the NMPRC has not recently performed, nor is currently performing an investigation specifically into pension related costs, the pension related costs of Southwestern Public Service Company, along with all other costs, will be examined in pending Case No. 12-00350-UT (Southwestern Public Service Company general rate case).

New Orleans City Council Utilities Regulatory Office - CNO Docket No. UD-08-03

New York State Public Service Commission - Case 07-W-0463, Case 10-M-0263, Case 11-W-0070

| Notes: | Reclassification of cost to align jurisdiction gas cost revenue with gas cost expense Prior to 2009 Depreciation for all TGS jurisdictions was recorded to division office rather than loca redassification of book depreciation was made above. Instead, book depreciation is reversed from to the control of the con | | Since book depreciation is entirely reversed and replaced with tax depreciation, no ich it was actually recorded Total Alloc to | irely reversed and | replaced with tax or | depreciation, no |
| | 3. Allocation of Shared Costs to Service Area Allocable Shared Service Area Allocable Shared Service Costs Allocable Shared Service Costs Central Customers as of 6/30/2019 Gulf Customers as of 6/30/2019 Total TGS Customers as of 6/30/2019 Allocation Factor 363,381,984 | S.796,098 913,796,098 263,781 44,622 663,330 663,330 39,7662% 6.7270% | Central Gulf 46.4932% 424,853,048 | | | |
| | 4 - "Tax Depreciation" represents all book vs. tax plant-related timing differences including the excess of tax depreciation (including tax bonus depreciation) over book depreciation; amounts expense devicted as expense per tax but taken to accumulated depreciation per book; the impact of any write off to expense of the net book value for tax purposes at the time of retirement, and CIAC credits taxed as income when received for tax purposes but deducted from plant basis per book. 5. If the NOL ADIT adjustment is a credit amount (negative amount), the carryforward to the summary ADFIT page will be zero since that means that there is net taxable income rather than a tax NOL (net operating | reciation (including tax t cumulated depreciation ted from plant basis per ge will be zero since thi | oonus depreciation) ow per book; the impact o book. at means that there is r | er book depreciati f any write off to e net taxable income | on; amounts exper xpense of the net l rather than a tax | nsed per tax as repai book value for tax NOL (net operating |
| | loss). 6. If adding the NOL to the jurisdiction's other ADFIT components results in a net ADFIT debit, only add in only enough of the NOL above to bring the total net ADFIT for the jurisdiction to \$0 | enough of the NOL abov | ve to bring the total net | ADFIT for the juri | sdiction to \$0. | |

ONE Gas, Inc. NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Our accompanying unaudited consolidated financial statements have been prepared pursuant to the rules and regulations of the SEC. These statements also have been prepared in accordance with GAAP and reflect all adjustments that, in our opinion, are necessary for a fair statement of the results for the interim periods presented. All such adjustments are of a normal recurring nature. The 2018 year-end consolidated balance sheet data was derived from audited consolidated financial statements, but does not include all disclosures required by GAAP. These unaudited consolidated financial statements should be read in conjunction with the audited consolidated financial statements and footnotes in our Annual Report. Our significant accounting policies are described in Note 1 of our Notes to Consolidated Financial Statements in our Annual Report. Due to the seasonal nature of our business, the results of operations for the three and six months ended June 30, 2019, are not necessarily indicative of the results that may be expected for a 12-month period.

We provide natural gas distribution services to our 2.2 million customers through our divisions in Oklahoma, Kansas and Texas through Oklahoma Natural Gas, Kansas Gas Service and Texas Gas Service, respectively. We serve residential, commercial, industrial and transportation customers in all three states.

Use of Estimates - The preparation of our consolidated financial statements and related disclosures in accordance with GAAP requires us to make estimates and assumptions with respect to values or conditions that cannot be known with certainty that affect the reported amount of assets and liabilities, and the disclosure of contingent assets and liabilities at the date of the consolidated financial statements. These estimates and assumptions also affect the reported amounts of revenues and expenses during the reporting period. Items that may be estimated include, but are not limited to, the economic useful life of assets, fair value of assets and liabilities, provision for doubtful accounts, unbilled revenues for natural gas delivered but for which meters have not been read, natural gas purchased but for which no invoice has been received, provision for income taxes, including any deferred tax valuation allowances, the results of litigation and various other recorded or disclosed amounts.

We evaluate these estimates on an ongoing basis using historical experience and other methods we consider reasonable based on the particular circumstances. Nevertheless, actual results may differ significantly from the estimates. Any effects on our financial position or results of operations from revisions to these estimates are recorded in the period when the facts that give rise to the revision become known to us.

Segments - We operate in one reportable and operating business segment: regulated public utilities that deliver natural gas to residential, commercial, industrial and transportation customers. The accounting policies for our segment are the same as those described in Note 1 of our Notes to Consolidated Financial Statements in our Annual Report. We evaluate our financial performance principally on operating income. For the three and six months ended June 30, 2019, and 2018, we had no single external customer from which we received 10 percent or more of our gross revenues.

Reclassification of Prior Year Presentation - Certain prior year amounts have been reclassified for consistency with the current year presentation. Adjustments have been made to the consolidated balance sheets and consolidated statements of cash flows for the year ended December 31, 2018, to include accrued interest and accrued liabilities in other current liabilities. These reclassifications had no effect on the reported results of operations in the consolidated statements of income or previously reported cash flows from operating activities in the consolidated statements of cash flows.

Recently Issued Accounting Standards Update - In August 2018, the FASB issued ASU 2018-15, "Intangibles - Goodwill and Other - Internal-Use Software (Subtopic 350-40): Customer's Accounting for Implementation Costs Incurred in a Cloud Computing Arrangement That Is a Service Contract (a consensus of the FASB Emerging Issues Task Force)," Under this guidance, a company should defer implementation costs that it incurs if the company would capitalize those same costs under the internal-use software guidance for an arrangement that is a software license. This standard is effective for interim and annual periods in fiscal years beginning after December 15, 2019, and early adoption is permitted. We will adopt this standard January 1, 2020, using the prospective transition approach. We are currently assessing the potential impacts of adopting this standard, but do not expect a material impact on our consolidated financial statements.

In February 2018, the FASB issued ASU 2018-02, "Income Statement - Reporting Comprehensive Income (Topic 220): Reclassification of Certain Tax Effects from Accumulated Other Comprehensive Income," which allows a reclassification from accumulated other comprehensive income (loss) to retained earnings for stranded tax effects resulting from the Tax Cuts and Jobs Act of 2017. We adopted this new guidance in the first quarter 2019 and our adoption did not result in a material impact to our consolidated financial statements. This change is reflected in our consolidated statements of equity.

Selected Operating Information - The following tables set forth certain selected operating information for the periods indicated:

| | | Three Months Ended June 30, | | | | | | | | Variances 2019 vs. 2018 | | | | | |

The following table reflects the total volumes delivered, excluding the effects of weather normalization mechanisms on sales volumes.

| | Three Mor | | Six Months Ended June 30, | | |
|--------------------------------|-----------|--------|------------------------------|---------|--|
| Volumes (MMcf) | 2019 | | 2019 | 2018 | |
| Natural gas sales | | | | A | |
| Residential | 13,417 | 15,605 | 79,114 | 76,590 | |
| Commercial and industrial | 5,093 | 5,881 | 24,365 | 23,871 | |
| Wholesale and public authority | 384 | 355 | 1,527 | 1,222 | |
| Total sales volumes delivered | 18,894 | 21,841 | 105,006 | 101,683 | |
| Transportation | 51,426 | 51,770 | 117,011 | 116,686 | |
| Total volumes delivered | 70,320 | 73,611 | 222,017 | 218,369 | |

Total sales volumes delivered decreased for the three months ended June 30, 2019, compared with the same period last year, due primarily to warmer weather in the second quarter 2019. Total sales volumes delivered increased for the six months ended June 30, 2019, compared with the same period last year, due primarily to colder weather in the first quarter 2019. The impact of weather on residential and commercial net margin is mitigated by weather-normalization mechanisms in all jurisdictions.

The following table sets forth the HDD's in our service areas for the periods indicated:

3. CREDIT FACILITY AND SHORT-TERM NOTES PAYABLE

In October 2018, we exercised a one-year extension of the ONE Gas Credit Agreement, The ONE Gas Credit Agreement remains a \$700 million revolving unsecured credit facility and includes a \$20 million letter of credit subfacility and a \$60 million swingline subfacility. We are able to request an increase in commitments of up to an additional \$500 million upon satisfaction of customary conditions, including receipt of commitments from either new lenders or increased commitments from existing lenders. The ONE Gas Credit Agreement expires in October 2023, and is available to provide liquidity for working capital, capital expenditures, acquisitions and mergers, the issuance of letters of credit and for other general corporate purposes.

The ONE Gas Credit Agreement contains customary events of default. Upon the occurrence of certain events of default, the obligations under the ONE Gas Credit Agreement may be accelerated and the commitments may be terminated. The ONE Gas Credit Agreement also contains certain financial, operational and legal covenants. Among other things, these covenants include maintaining ONE Gas total debt-to-capital ratio of no more than 70 percent at the end of any calendar quarter. The ONE Gas Credit Agreement also contains customary affirmative and negative covenants, including covenants relating to liens, indebtedness of subsidiaries, investments, changes in the nature of business, fundamental changes, transactions with affiliates, burdensome agreements, and use of proceeds. In the event of a breach of certain covenants by ONE Gas, amounts outstanding under the ONE Gas Credit Agreement may become due and payable immediately. At December 31, 2018, our total debt-to-capital ratio was 44 percent and we were in compliance with all covenants under the ONE Gas Credit Agreement.

The ONE Gas Credit Agreement contains provisions for an applicable margin rate and an annual facility fee, both of which adjust with changes in our credit rating. Based on our current credit ratings, borrowings, if any, will accrue interest at LIBOR plus 79.5 basis points, and the annual facility fee is 8 basis points.

We have a commercial paper program under which we may issue unsecured commercial paper up to a maximum amount of \$700 million to fund short-term borrowing needs. The maturities of the commercial paper notes may vary but may not exceed 270 days from the date of issue. The commercial paper notes are sold generally at par less a discount representing an interest factor.

The ONE Gas Credit Agreement is available to repay the commercial paper notes, if necessary. Amounts outstanding under the commercial paper program reduce the borrowing capacity under the ONE Gas Credit Agreement.

At December 31, 2018, we had \$299.5 million of commercial paper, \$1.2 million in letters of credit issued under the ONE Gas Credit Agreement, with no borrowings and \$399.3 million of remaining credit available under the ONE Gas Credit Agreement. The weighted-average interest rate on our commercial paper was 2.54 percent and 1.55 percent at December 31, 2018 and 2017, respectively.

4. LONG-TERM DEBT

In November 2018, ONE Gas issued \$400 million of 4.50 percent senior notes due 2048. The proceeds from the issuance were used to retire the \$300 million of 2.07 percent senior notes due 2019, to reduce the commercial paper and for general corporate purposes.

Our senior notes consist of \$300 million of 3.61 percent senior notes due 2024, \$600 million of 4.658 percent senior notes due 2044, and \$400 million of 4.50 percent senior notes due 2048. The indenture governing our Senior Notes includes an event of default upon the acceleration of other indebtedness of \$100 million or more. Such events of default would entitle the trustee or the holders of 25 percent in the aggregate principal amount of the outstanding Senior Notes to declare those senior notes immediately due and payable in full.

Depending on the series, we may redeem our Senior Notes at par, plus accrued and unpaid interest to the redemption date, starting three months, or six months, respectively, before their maturity dates. Prior to these dates, we may redeem these Senior Notes, in whole or in part, at a redemption price equal to the principal amount, plus accrued and unpaid interest and a make-whole premium. The redemption price will never be less than 100 percent of the principal amount of the respective note plus accrued and unpaid interest to the redemption date. Our Senior Notes are senior unsecured obligations, ranking equally in right of payment with all of our existing and future unsecured senior indebtedness.

VALUE LINE ECONOMIC AND STOCK MARKET COMMENTARY

Much has changed in the three months since our last Quarterly Economic Review, with the unsettled global situation-which had been more of an ancillary concern-fast becoming a series of headline events. True, a trade dispute with China was well under way at the time of our last in-depth look at the economy in late May. But back then, while acknowledging that "our deteriorating trade relations with China will exact a toll," we also had opined: "we sense that the respective sides will work towards a detente of some sort." Now, we are less certain, with neither combatant showing sustained efforts at compromise. Still, there have been strides in that direction recently, as the United States has decided to delay the implementation of some tariffs, to scrap others altogether, and to resume trade talks, while China has talked up the idea of compromises.

There are fewer headlines being made domestically, though here, too, concerns surface periodically. To wit, our previous forecast of 2.2% growth in the second quarter was rather prescient (as GDP gained 2.1%). Also, we said at the time that "the fundamentals appear sufficiently sound to prevent a recession this year." We are standing by that forecast. Still, the composition of that growth has changed, with less help globally, but more assistance from the Federal Reserve (in the form of a faster pace of interest-rate cuts), and stepped-up gains in consumer spending. The end result should be similar, with fairly stable growth over the next few years, interrupted by brief downdrafts and short-term growth spurts along the way.

Meanwhile, three months ago, we observed that "the spring warm up, often an annual ritual for our economy, may not take place this year." And that suggestion, too, was on the mark, to a point, as GDP growth did decelerate from 3.1% to 2.1% from the first to the second quarter. However, the components for the latter three-month span were vastly different, with the later period bringing a sharp decline in exports (reflecting our worsening trade rift with China)

BLUE CHIP FINANCIAL FORECASTS

Top Analysts' Forecasts Of U.S. And Foreign Interest Rates, Currency Values And The Factors That Influence Them.

Vol. 38 No. 6 June 1, 2019

Long-Range Survey:

The table below contains the results of our twice-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are consensus estimates for the years 2021 through 2025 and averages for the five-year periods 2021-2025 and 2026-2030. Apply these projections cautiously. Few if any economic, demographic and political forces can be evaluated accurately over such long time spans.

Rating Action: Moody's affirms ONE Gas at A2, revises outlook to stable from negative

28 Jan 2019

Approximately \$1.3 billion of debt affected

New York, January 28, 2019 -- Moody's Investors Service ("Moody's") today affirmed the ratings of ONE Gas, Inc (ONE Gas), including its A2 senior unsecured rating and P-1 commercial paper rating. At the same time, Moody's revised the rating outlook to stable from negative.

Outlook Actions:

..Issuer: ONE Gas, Inc

....Outlook, Changed To Stable From Negative

Affirmations:

.. Issuer: ONE Gas, Inc

....Senior Unscured Shelf, Affirmed (P)A2

....Senior Unsecured Commercial Paper, Affirmed P-1

....Senior Unsecured Regular Bond/Debenture, Affirmed A2

RATINGS RATIONALE

"ONE Gas' financial metrics will remain steady over the next few years thanks to corporate actions to mitigate the negative impacts of tax reform and improved recovery of eligible system investments allowed in Kansas" stated Nana Hamilton, Analyst.

The change in rating outlook to stable from negative reflects corporate actions that ONE Gas has taken to strengthen its balance sheet and key financial ratios. For example, ONE Gas adjusted the timing of its projected debt issuances and has introduced plans to issue new equity as part of its financing plan. Furthermore, ONE Gas has terminated its share buy-back program and Moody's expects dividend increases over the next few years will be at the lower end of the company stated 7%-9% rate of increase. The corporate dividend policy is still a credit negative, in the sense that dividend growth appears higher than earnings growth, and the ratio of retained cash flow to debt is calculated to remain in the mid-teen's range over the next few years, reflecting the Baa-rating category in our rating methodology grid.

In addition, Moody's thinks Kansas bill SB 279, enacted in June 2018, will result in improved recovery of infrastructure spend in the state, a credit positive. The bill amended the Gas Safety Reliability Policy Act which governs the utility's gas safety reliability surcharges (GSRS) mechanism. The new bill allows gas utilities to recover costs for eligible infrastructure system investments and not only infrastructure system replacements per previous law. Furthermore, the bill increases the amount of GSRS that may be approved by the Kansas commission from 10% up to 20% of the utility's base revenue as determined in the most recent general rate proceeding. The bill also raises the cap on the GSRS monthly charge from \$0.40 to \$0.80 per residential customer over the base rates in effect for the initial filing and each subsequent filing.

ONE Gas' A2 unsecured rating primarily reflects the company's low business risk profile as a fully regulated Local Distribution Company (LDC). ONE Gas operates in the credit supportive regulatory jurisdictions of Oklahoma, Kansas and Texas, with substantial fixed fee rates and an attractive suite of rider recovery mechanisms that support predictable revenue and cash flow generation. In addition, the company's proximity to significant natural gas reserves provides access to long-term low-cost natural gas supply. These strengths are somewhat offset by a significant capital investment program and credit metrics which, while expected to remain stable, are on the weak end of the acceptable range for the rating. Over the next two years, the

company plans to spend over \$400 million per year in capex, relative to about \$300 million on average historically, and Moody's projects cash flow from operations before changes in working capital (CFO pre-WC) to debt around 20%.

Outlook

ONE Gas' stable rating outlook is predicated on the utility's ability to keep generating consistent and predictable operating cash flows; the continued supportiveness of its three state regulators; conservative financing policies; and the maintenance of relatively weak but sustained debt coverage ratios, including CFO pre-WC to debt around 20%.

What could change the rating - UP

A rating upgrade could be considered if ONE Gas experiences greater regulatory supportiveness such that financial metrics improve, including CFO pre-WC to debt above 25%, on a sustained basis

What could change the rating - DOWN

A downgrade could be considered if there is a significant decline in the support provided by the utility's regulators or if the company decides to adopt a more aggressive dividend payout policy at the same time as it executes on its elevated capex program or if there is a deterioration in financial metrics, including CFO pre-WC to debt below 20% for an extended period.

The principal methodology used in these ratings was Regulated Electric and Gas Utilities published in June 2017. Please see the Rating Methodologies page on www.moodys.com for a copy of this methodology.

REGULATORY DISCLOSURES

For ratings issued on a program, series or category/class of debt, this announcement provides certain regulatory disclosures in relation to each rating of a subsequently issued bond or note of the same series or category/class of debt or pursuant to a program for which the ratings are derived exclusively from existing ratings in accordance with Moody's rating practices. For ratings issued on a support provider, this announcement provides certain regulatory disclosures in relation to the credit rating action on the support provider and in relation to each particular credit rating action for securities that derive their credit ratings from the support provider's credit rating. For provisional ratings, this announcement provides certain regulatory disclosures in relation to the provisional rating assigned, and in relation to a definitive rating that may be assigned subsequent to the final issuance of the debt, in each case where the transaction structure and terms have not changed prior to the assignment of the definitive rating in a manner that would have affected the rating. For further information please see the ratings tab on the issuer/entity page for the respective issuer on www.moodys.com.

For any affected securities or rated entities receiving direct credit support from the primary entity(ies) of this credit rating action, and whose ratings may change as a result of this credit rating action, the associated regulatory disclosures will be those of the guarantor entity. Exceptions to this approach exist for the following disclosures, if applicable to jurisdiction: Ancillary Services, Disclosure to rated entity, Disclosure from rated entity.

Regulatory disclosures contained in this press release apply to the credit rating and, if applicable, the related rating outlook or rating review.

Please see www.moodys.com for any updates on changes to the lead rating analyst and to the Moody's legal entity that has issued the rating.

Please see the ratings tab on the issuer/entity page on www.moodys.com for additional regulatory disclosures for each credit rating.

ESPECIALLY NOTEWORTHY:

This week, a couple of pipeline companies join the ranks of the Value Line Investment Survey. Antero Midstream and EnLink Midstream come on board in the Oil/Gas Distribution Industry on pages 609 and 613, respectively.

Uneven oil prices have created value in some big-name petroleum issues, such as France's Total. Page 521.

The good-quality shares of natural gas utility South Jersey Industries (page 554) should prove a nice fit for investors in search of steady income and dividend growth.

Ecolab's earnings engine continues to hum along. Check out the water and food safety specialist's prospects on page 567.

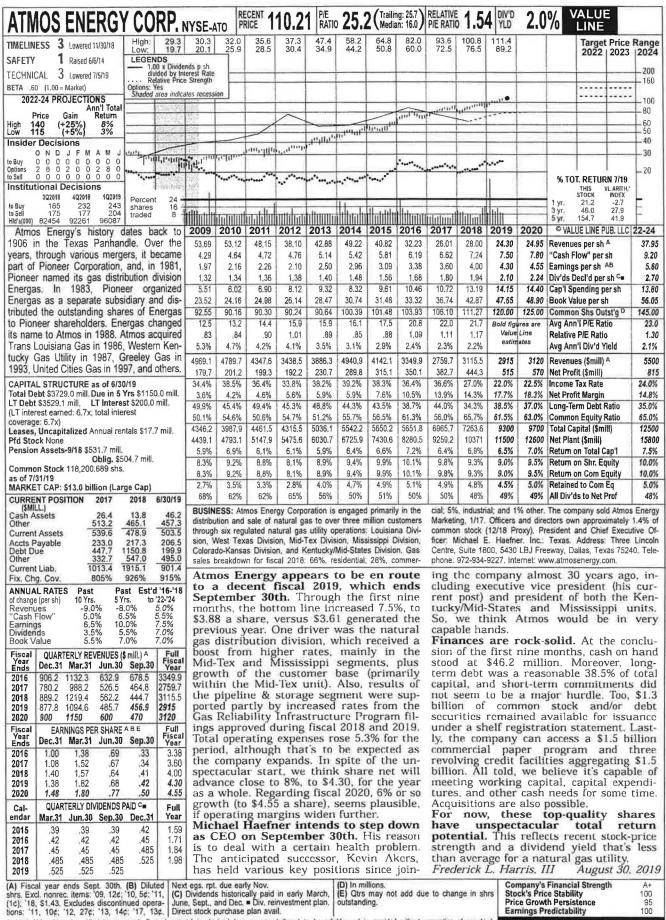

Chemical Industry component W.R. Grace appears well positioned to boost profits over the long haul. See page 572 for an update.

Enbridge Inc.'s pipeline business has solid growth potential with the ongoing development of shale reserves in North America. Turn to page 612 for more.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 3-31-20, the arrow indicates a change since the preceding week. When a diamond ♦ (indicating a new figure) appears alongside the latest quarterly earnings

results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

^{**} Supplementary Report in this week's issue.

Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 3-31-20, the arrow indicates a change since the preceding week. When a diamond ◆ (indicating a new figure) appears alongside the latest quarterly earnings

results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

^{**} Supplementary Report in this week's issue.

Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

^(•) All data adjusted for announced stock split or stock dividend. See back page of Ralings & Reports.

New figure this week.
(b) Canadian Dollars.
(d) Deficit.

The estimate may reflect a probable increase or decrease. If a dividend boost or cut is possible but not probable, two figures are shown, the first is the more likely.
 Dividends subject to foreign withholding tax for U.S. residents.

For Timeliness, 3-5 year Target Price Range, or Estimated Earnings 12 months to 3-31-20, the arrow indicates a change since the preceding week. When a diamond ♦ (indicating a new figure) appears alongside the latest quarterly earnings

results, the rank change probably was primarily caused by the earnings report. In other cases, the change is due to the dynamics of the ranking system and could simply be the result of the improvement or weakening of other stocks.

^{**} Supplementary Report in this week's issue,
A Arrow indicates the direction of a change. When it appears with the Latest Dividend, the arrow signals that a change in the regular payment rate has occurred in the latest quarter.

⁽e) All data adjusted for announced stock split or stock dividend. See back page of Ratings & Reports.

New figure this week.
(b) Canadian Dollars.
(d) Deficit.

The estimate may reflect a probable increase or decrease. If a dividend boost or cut is possible but not probable, two figures are shown, the first is the more likely.
 Dividends subject to foreign withholding tax for U.S. residents.

Est'd Earnings & Est'd Dividends after conversion to U.S. dollars at Value Line estimated translation rate.
 All Index data expressed in hundreds.

⁽i) All Index data expressed in hunoreus.

Atmos Energy Corporation. Atmos Energy Corporation is a fully-regulated, natural-gas-only distributor engaged primarily in the regulated natural gas distribution and pipeline businesses, as well as other nonregulated natural gas businesses. It operates through three segments: regulated distribution segment, which includes its regulated distribution and related sales operations; regulated pipeline segment, which includes pipeline and storage operations of its Atmos Pipeline-Texas Division, and nonregulated segment, which includes its nonregulated natural gas management, nonregulated natural gas transmission, storage and other services. Its nonregulated businesses provide natural gas management, transportation and storage services to local gas distribution companies, including certain of its natural gas distribution divisions and industrial customers in the Midwest and Southeast. It also manages its natural gas pipeline and storage assets, including its intrastate natural gas pipeline systems in Texas.

VERUS OPINION

The Verus Opinion, provided by Verus Analytics Inc, is an empirically-derived and historically back-tested stock rating system with buy, hold, and sell opinions. To develop a rating, the quantitative system analyzes a company's earnings quality, balance sheet, and income statement, conducts technical and valuation analysis and evaluates the transactions made by the firm's management and directors (i.e. insiders).

The Verus Opinion covers 4251 companies, with 11.3% rated Buy, 64.7% rated Hold, and 24.0% rated Sell as of 2019-10-04. Verus Analytics Inc is a private independent research firm, unaffiliated with Thomson Reuters, that specializes in engineering institutional ratings systems.

THOMSON REUTERS I/B/E/S MEAN

PRICE AND VOLUME CHARTS

BUSINESS SUMMARY

Southwest Gas Corporation. Southwest Gas Holdings, Inc., formerly Southwest Gas Corporation, is engaged in the business of purchasing, distributing and transporting natural gas. The Company operates through two segments: natural gas operations and construction services, which includes the operations of the Company's subsidiary, Centuri Construction Group, Inc. (Centuri). The Company operates two pipeline transmission systems, such as a system, which includes a liquefied natural gas (LNG) storage facility owned by Paiute extending from the Idaho-Nevada border to the Reno, Sparks, and Carson City areas and communities in the Lake Tahoe area in both California and Nevada and other communities in northern and western Nevada, and a system extending from the Colorado River at the southern tip of Nevada to the Las Vegas distribution area.

PRICE AND VOLUME CHARTS

BUSINESS SUMMARY

Spire Inc. Spire Inc. is engaged to transform its business and pursue growth by growing its gas utility business through prudent investment in infrastructure upgrades and organic growth initiatives; acquire and integrate gas utilities; modernize its gas assets, and invest in innovation. The Company has two business segments, which include gas utility and gas marketing. The gas utility segment includes the regulated operations Spire Missouri, Spire Alabama, Spire Gulf and Spire Mississippi. The gas marketing segment includes Spire Marketing Inc. (Spire Marketing), a wholly owned subsidiary engaged in the marketing of natural gas and related activities on a non-regulated basis. Mobile Gas and Willmut Gas are subsidiaries of EnergySouth.

At the center of everything we do is a strong commitment to independent research and sharing its profitable discovenes with investors. This dedication to giving investors a trading advantage led to the creation of our prown 2 zacks Rank stock-rating system. Since 1938 it has more than doubled the S3P 500 with an average gain of +24.50% per year. These returns over a period from January 1, 1958 through September 2, 2019. Zacks Rank stock-rating system returns are computed monthly based on the beginning of the month and end of the month Zacks Rank stocks prices plus any dividends received during that particular month, A simple, equally-weighted average return of all Zacks Rank stocks is calculated to determine the monthly return. The monthly returns are then compounded to arrive at the annual return. Only Zacks Rank stocks included in Zacks hypothetical portfolios at the beginning of each month are included in the return calculations, Zacks Ranks stocks can, and often do, change throughout the month. Certain Zacks Rank stocks for which no month-end price was available, pricing information was not collected, or for certain other reasons have been excluded from these return calculations.
